As the owner of a Triumph Stag and 2 MG's I spoke from no small amount of frustrating experience. The Stag dripped oil no matter what was done. One of the neatest looking engines around for a circa 70's car, finally installed a Buick V-6 and all is right in the world! ;>)

Time to talk to the Dean again, ABOUT WHAT? Someone's Faith? Belief in God!
Take your freedom of speech limiting, politically correct BS and....well, you
know
>toomanyradios@aol.com spewed:
>*sigh*
>Time to talk to the Dean again...

Check the list below & see how you rate.

I, as a good democrat, believe

a. that Margaret Sanger & Gloria Steinmen are more important to American
history than Thomas Jefferson, Robert E. Lee or Thomas Edison.

b. that standardized tests are racist, but racial quotas and set-asides aren't.

c. that homosexual parades displaying drag queens, transvestites and bestiality
should be constitutionally protected while manger scenes at Christmas and the
10 Commandments in your classroom should be illegal.

d. that AIDS virus is spread by lack of federal funding and not lifestyle.

e. that global temperatures are less effected by cyclical, documented changed
in the earth's climate and more effected by yubbies driving SUVs.

f. that the NRA is bad because it supports certain parts of the Constitution,
while the ACLU is good because it supports certain parts of the Constitution.

g. that taxed are too low, but ATM fees are too high.

h. that the military, not corrupt politicians, start wars.

i. that self-esteem is a gift to students from teachers and not something that
is individually earned.

j. that hunters don't care about nature, but activist "greens" do.

k. that businesses create oppression and government creates prosperity & jobs.

l. that capital punishment is evil while abortion on demand at any point in
pregnancy is good.

m. that gender roles are artificial but being homosexual is natural.

n. that guns in the hands of law-abiding citizens are more of a threat to your
safety than nuclear weapon technology in the hands of Chinese communists.

o. that government knows how to raise your children better than you do.

p. that Al Gore invented the internet.

Virtually anyone can be a democrat. Just quit thinking; and then, vote that way.

I think it's great that just one sentence of my words can stir you to such extreme levels of paranoia.

Threatening phone calls? Mail? Sorry, wrong guy. It's not my style. Sorry to crush your ego, Jeffy, but you're not worth that much of my time and effort.

However, I do take issue with your use of taxpayer-funded, public university Internet access to post your off-topic biblical quotes in this forum. Especially since you spend a great deal of your time on here playing the role of "net cop" and criticizing others for posting that which you feel is improper content for this newsgroup.

Since your employer is also the provider of your Internet access which is being used for this purpose, I do believe the Dean (a/k/a your supervisor) has the right to be informed as to what goes on here.

Capiche?

: Hmmmmmm, so the will of the people only matters in Democratic counties.

Gore's people are concerened with votes for Gore, Bush decided (or couldn't figure out how) to not have "his" counties votes recounted within the 72 hr time period allowed for such requests. The whole state was automatically machine recounted due to the small percentage difference in votes.

Did you know that in one county of 600 votes cast, that there were -16,000 votes registered for Gore? So guess what? Gore's people asked for a recount. And I haven't heard any crazies suggesting that Bush's people had anything to do with it. It was just accepted as a mistake and acted on.

: I am beginning to understand. What about the thousands of disenfranchised
: Republican citizens who decided not to vote after the networks declared
: that Gore had won Florida before the Florida polls closed?

What about the thousands of disenfranchised Demo. citizens who decided not to vote after the networks declared that Bush had won Florida before the Florida polls closed?

(I don't understand what it is you're trying to prove. I am just presenting what I read/see to counteract some of the junk being thrown around on the NG.)

: : > Let the voters in California raise a stink of their own if they don't
: > like what happened.

: Hmmmmmm, so the will of the people only matters in Florida. It's getting
: more and more clear.

Really now Cecil. Do you think that Calif would allow Fla voters to vote in their elections if a bill was presented on what to do with all those Calif votes that you say weren't counted? It's a California problem not a Fla problem.

What happened to "live and let live"? :)

: > What do you think of the idea of splitting the electorial votes?

: I do believe that is unconstitutional in Florida.

Could be (but I think it would be easier to change within various states
than nation wide), but what do you think of the idea of splitting the
electorial votes?

You haven't looked in a while. The fee is $6.65 for calendar year 2000.
Furthermore, the form 605 that's on the FCC's web site is not the same one that
is used for testing; it's for renewals, address changes, vanity applications,
and such. Most VEC's use the NCVEC-605, but some don't.

1SL1A, SEALAND. Jon Utley, K7CO, now also known as 1SL1J, informs OPDX that this operation is still planned to take place in December, even after last week's statements by the UK Radiocommunications Agency calling this operation "ILLEGAL". He states that his team will be made up of Americans, British, and, of course, Sealanders. However, he states, each amateur has to choose whether or not to participate in this operation. Jon has been issued a license from the goverment of Sealand, and he intends to operate using this license. He reports that he has "personally seen that the British courts have ruled that Sealand is out of its jurisdiction, therefore Sealand's claims to independence have validity." OPDX InterNet Subscribers will receive Jon's press release as an additional bulletin.

3A, MONACO. Operator Laura, 3A2MD, was heard by stateside station on long path this past weekend on 28035 kHz between 1430 and 1515z.

3W, VIETNAM. Hans, WA1LWS, is still very active as 3W2LWS. Activity this past week was mainly on 15 meters CW between 0030z and 0230z. QSL via WA1LWS. Also, active this past week was 3W8LI from Saigon on 10 meters SSB between 0130 and 0230z.

4X3, ISRAEL. Look for Riki, 4X4NJ, to be active as 4X3A as a Single Op Single Band (160m) entry during the CQWW CW Contest. This is Zone 20. QSLs via WA4WTG.

5R, MADAGASCAR. There was plenty of activity from here last week. 5R8FL kept the SSB folks happy on 20 meters between 14190 and 14200 kHz after

0230z. Albert, 5R8O, was also active on 20 meters but on CW around 14014 kHz after 0300z. QSL via 5R8FL. 5R8FU was busy on 10 meters around 28497 kHz between 1530 and 1830z. QSL via SM0DJZ. Lastly, 5R8GT was active on both 10 and 15 meters CW/SSB. Check 28008, 21003 and 28442 kHz around 1300z and 1800z.

5T, MAURITANIA. The "Les Nouvelles DX" reports that Yannick, F6FYD, has received the callsign 5T5YD. He will be active on all bands on SSB with a FT-847. He will also try to activate some islands for the IOTA. Look for him to sign 5T5YD/P on November 22nd, from Banc d'Arguins (AF-050). QSL via F6FYD.

5X, UGANDA. Tapani, OH5BM, plans to activate the 5X1Z station in Uganda in the CQWW DX CW Contest as a Single Op/Single Band (15m or 10m) entry on November 24-26th. Before the contest he will operate on 10 and 15 meters SSB/CW. He thanks Mats, SM7PKK, for this nice opportunity. QSL to SM6CAS.

9H3, MALTA. Con (Cornelius), DF4SA, will be active from here in the CQWW CW Contest as a Single Op/All Band/Low Power entry. His callsign is not known as this was being prepared. All QSOs will be confirmed via bureau (via DF4SA).

9M6, EAST MALAYSIA. Hide/JH8KYU and Sei/JF1SQC will be active from here during the period of November 23-27th. They will take part in the upcoming CQWW CW Contest as a Multi-Operators/Single Transmitter entry. Their QTH will be the newest YAESU rental shack at Tang Dynasty Hotel in Kota Kinabalu. Sunrise/sunset times there are at 2208/0957z. The callsign used in this contest will be 9M6SMT. Another callsign, 9M6HTT, will also be used outside the contest. QSL route for both 9M6SMT and 9M6HTT via JF1SQC.

AH2, GUAM. Aki, JI3ERV/NH2C, Chairman of Guam Contest Club (GCC), informs OPDX that GCC members/operators Toshi/JR7OMD/WI3O, Noz/JE8KKX, Aki/JP1OGL and himself will be active again during CQWW CW Contest as AH2R at the end of this month. This time, they set a target as the Oceanic leader in the Multi-Single category that will be very competitive due to the fact that there are many planned to be active. Also, they are trying to build an Oceanic record in Muliti-Single category. Guam Island's (KH2, Zone 27, IOTA OC-26) sunrise/sunset is 2026/0751z. QSL via JH7QXJ direct or the JA bureau, NOT the KH2 bureau (Please Note: QSL Manager is changed!) Lastly, Aki, JI3ERV/NH2C, states, "Thanks for stopping your radio's VFO and gave us a precious point during CQWW SSB."

ASIAN DX WINDOW. Eugene, RA0FF, reports that the "Asia (((DX))) Window" (ADXW) InterNet Web Cluster (http://dx.bgtelecom.ru) now has an open special notice board for the purpose of a meeting times for on the air (SKEDs) for the 160/80 meters bands. "ADXW" hopes that this idea gets the support of radio amateurs and will render an aid in getting new entites for DXCC.

CQ9, MADEIRA ISLAND. Frank, DL2CC, will be active from here as CT3/DL2CC from November 23-28th. He will sign as CQ9K in the CQ Worldwide DX CW

Contest as a Single Op/All Bands entry.

D6, COMOROS. Josep/EA3BT and Nuria/EA3WL are pleased to announce their annual DXpedition. This year's destiny will be to Comoros, and their operation will be between January 13-28th (2001). The callsigns that will be used are: D68BT, issued to Josep, EA3BT; D68WL, issued to Nuria, EA3WL. They will operate on 80-10 meters, included WARC bands, using SSB, RTTY and some CW. They will have two stations on the air, one on 10/15/20 meters, and the another on the WARC bands or 40/80 meters. The QSL information is via EA3BT at: Josep Gibert, Col-legi, 1, 08800 Vilanova i la Geltru, SPAIN. You can find more information at their Web page at: http://www.qsl.net/ea3bt
They will try to have daily logs online.

DIFO WEB SITE. Gil, F5NOD, reports that information on the DIFO Award and DIFO Award scores can be found at: http://f5nod.waika9.com/difo.html
The DIFO Award is the "French Overseas Island Award".

EA6, BALEARIC ISLANDS. Operators EA3AIR/Julio, EA3AJW/Jaume, EA3ALV/Xavier (the grandfather of the crew - near 69 years old), EA3KU/Fernando, EA5BM/ Juan, EA6ACC/Josep and EA6FB/Pepe will activate the station EA6IB in CQWW CW Contest from Ibiza Island as a Multi-single operation. Technical support will be provided by EA5ZF/Javier, EB6AOK/Enric, EA6FO/Vicent and his family, and the cooking by EA3AIR's XYL Patro. Look for them during the contest as EA6IB, before and after the contest as EA6/homecalls.

EP, IRAN. Ali, EP2MKO, was heard this past week on 10 meters CW on 28006 kHz around 1330z. He was also heard on 12 meters around 24890 kHz after 1230z. QSL via UA6HCW.

FO, FRENCH POLYNESIA. Look for Bruno, TK5PB, to be active as FO/TK5PB now through November 27th. He will concentrate mainly on the WARC bands. Activity will be on Hao Atoll (OC-066). QSL via TK5PB.

FO & FO/A, FRENCH POLYNESIA AND AUSTRAL ISLANDS. Alain, F2HE, will once again head back to French Polynesia in early December and be active as FO0CLA from Rangiroa, Tuamotu Island (OC-066). There is a possibility for him to be active from Rurutu Island (OC-050) in the Austral Island group. He plans to be in the area for at least 8 months and he will be active on SSB and CW.

FRENCH ACTIVITIES.....
The "Les Nouvelles DX" reports that F6BFH, F5TYY, F5JY, F6AOI, F5LGQ are currently (or were currently) signing TG4/homecall from Guatemala. But look for F6BFH, F5TYY and F5JY to become active as V31FH, V31WY and V31BI. Also, look for F6AOI and F5LGQ from Honduras (no callsigns mentioned) until November 24th.

Andre, F6GQO, will be in Australes Sea between December 2-30th. He will sign F6GQO/MM from the "Marion Dufresnes" vessel. Andre will be active as FR/F6GQO from Reunion Island, however, if he can land he will also be active as FT/F6GQO/X from Kerguelen, FT/F6GQO/W from Crozet and may be FT/F6GQO/Z from Amsterdam. Look for him on 10135, 14035, 18075, 21035,

24900 and 28035 kHz CW only with an IC-706MKII and vertical antenna.

GJ, JERSEY. Look for GJ2A to operate as a Multi-Single from the Jersey Amateur Radio Society club station by K2WR, OH2BC, OH2BH, and OH2TA. QSL to MJ0BJU.

HR1, HONDURAS. Ernesto, HR1ERL, will be active in the CQWW CW Contest and will operate on 10/15/20/40 meters. Please send QSLs direct for any contact with this station via P.O. BOX 1734, Tegucigalpa Honduras, Central America, Zip Code 11101.

IOTA NEWS.....
AS-117. Kazu, JH4TEW/4, was heard to be very active from Tashima Island on 21260 kHz this past week. Begin looking for him after 2330z.

OC-201. Dr. Barry Kirkwood, ZL1DD, informs OPDX that he is temporarily QRT while his rig is being serviced. He states that he intends to be active for most of the CQWW CW Contest. Please note that Barry is a permanent resident on Waiheke Island and will be active mainly on HF CW as time permits. He will do his best to help anyone needing OC-201. SM0TLG is expected to be active from Barry's QTH during the first week in December. Barry states that he runs a small guest house there and will allow any visiting hams to use his radio. QSL via the Bureau or direct to: Barry Kirkwood PhD, Signal Hill, 66 Cory Road, Palm Beach, Waiheke Island 1240, NEW ZEALAND. Check the Web page at: http://www.waiheke.co.nz/signal.htm

OC-239. NEW IOTA! YC9WZJ/P was active from Batanta Island on all IOTA frequencies. Activity is expected to end before you read this. QSL via YC9BU.

JW0, SVALBARD. Vlad, JW0HR, was very active this past week on 20/15/10 meters SSB. Most of the activity begins after 1630z or 0000z. QSL direct to: Box 224, Barentsburg 9178, Svalbard Island, Norway. Also, active was Joe, JW5DW, mainly on 10 meters CW around 28018 kHz +/- 5 kHz after 1930z. QSL via LA5DW.

KH4, MIDWAY ISLAND. Bill, KH4/NH6D, is now QRT from Midway and reports that he hasn't any plans to return in the foreseeable future. He wants to thank everyone for the fun he had while he was on KH4 the past 6 1/2 months. QSL requests go to N6FF/Dick.

KH6ND/KH5 NOW QRT. A press release by Garry, NI6T, reports that Mike, KH6ND, has left Palmyra Atoll and has returned to Honolulu. The Nature Conservancy's (TNC) acitivities on Palmyra have ceased for the winter. Given the imminent change in ownership, they do not know what operating opportunities will be available in the future. However, Mike and the Kingman Reef/Palmyra DX Group (KRPDXG) hope to be involved in future amateur activity from Palmyra. A complete press release will be sent to all OPDX InterNet Subscribers as an additional bulletin.

LION'S CONTEST. The 30th annual "Hunting Lions on the Air Contest" will take place on January 13-14th. This year's contest will commemorate the birth of Melvin Jones, the founder of Lionism, who was born on January 13, 1879. The rules were sent to OPDX by Edwin, ZS5BBO, but because of their length, we could not put them in the additional bulletins section this week for subscribers. We will try to send them to all OPDX InterNet Subscribers next week or before the contest takes place. If you want the rules now, you can download them from the Web at: http://www.sarl.org.za/contests/lionita.htm

MU, GUERNSEY. Look for MU2K to operate in the CQWW CW Contest as a Multi-Single from the Guernsey Amateur Radio Society club station by GU3HFN, GU0SUP, OH1RX, OH3RB, OH8SR,and OH9MM. QSL (this contest only) to OH3LQK.

NH0, MARIANA ISLANDS. Just a reminder to look for JQ1UKK, JF2SKV, JG3VEI and JH5OXF to participate in the CQWW DX CW Contest as NH0S (Multi-Single High Power entry) from the Northern Marianas (OC-086). QSL via JF2SKV, either direct (Hisashi Matsushita, 14-1 Ugasemae Iwakura, Toyota, 444-2225 Japan) or through the JARL bureau. Look for them to be active before and after the contest, between November 23-27th. They will operate on all bands (160-6 meters) and modes (SSB, CW, RTTY, PSK31 and FM) as NH0S (QSL via JF2SKV), NH0V (QSL via JG3VEI), KH0/KD6CJF (QSL via JH5OXF) and KH0/JQ1UKK (QSL via JQ1UKK).

OH2BH PRESS RELEASE! OPDX InterNet Subscribers will receive a press release by Martti, OH2BH (provided by Tim, N4GN) on the following stations to be active in the upcoming CQWW CW Contest:
1) EA8BH, CANARY ISLANDS, ZONE 33 - New engines supplied to Finnish Formula Team. A new Yaesu FT1000MP Mark V radio at EA8BH.
2) OH0R, ALAND ISLANDS, ZONE 15.
3) JERSEY (GJ2A) AND GUERNSEY (MU2K), ZONE 14.

P4, ARUBA. Alan, K4AVQ, will be active as P40AV from here January 13-21st (2001). Activity will be on all bands from AI6V DX QTH. QSL via K4AVQ (SASE) to: Alan B Caplan, 14020 140th Court, Apple Valley, MN 55124-9422.

PJ4, NETHERLANDS ANTILLES. Dennis/NX7D, Karen/KA7EJO and Paul/WN7T will be on the Island of Bonaire in the Netherlands Antilles now through November 28th. They plan to operate as a Single Operator/All Band/Low Power entry in the CQWW CW Contest. They will operate under the CEPT rules as PJ4/WN7T. Please QSL to Paul's CURRENT address in the FCC database (his home address in Bellingham - not his old PO Box in Seattle).

QSL INFO AND NEWS.....
John, N1OLO, GNARC Special Event Co-ordinator, informs OPDX that "Hams waiting for the K1V Special Event certificates and QSL are asked to please be patient. The certificate design is finished and awaits approval of an outside committee. We had to wait until after the the event to design the certificate as we wanted to include photos taken on site. We anticipate a mailing to take place by 11-25-2000. Thanks again for your patience."

CORRECTION: Garry, NI6T, reports that in his earlier release, he mentioned that the Kingman Reef DXpedition logged almost 82,000 QSOs. He states that he should have said "almost 81,000." The total is around 80,800.

Jean Michel, F6AJA, reports that he has received the first part of the FM/F2JD logs. He will prepare a QSL and will try to print them as soon as possible. Please be patient.

HC8N Bureau Cards. Anyone who has sent cards via the bureau for any of N5KO's operations from HC8N and is still waiting, help is on the way. Trey's manager for HC8N, AA5BT, had fallen behind with answering bureau cards due to the high volume, and Randy, W5UE, has agreed to help get them out. Any cards sent via the bureau will be returned via the bureau system. Randy has begun processing the almost 8,000 card backlog, and they will begin going out soon. It will take a while to get caught up, since the W5 Incoming Bureau is receiving 400-500 new cards per month for HC8N. Cards sent direct to AA5BT with SASE will be returned direct as normal. "So, as with any bureau QSL request, patience is required.... 73 es DX", Randy/W5UE

NOT THE QSL MANAGER. Jari, OH1EB, reports that he was NOT the QSL Manager for the XZ1A operation in 1995. The manager is (and has been) Kan, JA1BK. He states that he has received many cards especially this year for this operation.

NOT THE QSL MANAGER. It was brought to your editor's (KB8NW) attention that I was listed on the Buckmaster Web page as 5R8O's QSL Manager. This is NOT correct, and I hope I corrected it on the Web page. I have not received any QSL cards yet, but I hope I caught the mistake early enough to correct it. The correct QSL Manager for 5R8O is 5R8FL.

S2, BANGLADESH. Two stations were active this past week. S21YH was heard on 15 meters CW/SSB. Check 21005 kHz around 0200z and 21241 kHz around 1230z. QSL via 7M4PTE. Also look for Stig, S21YJ, on 20 meters SSB around 14178 kHz after 0215z. QSL via SM4AIO.

SILENT KEY. News from "The Daily DX" reports that Mario, 5X1C, became a Silent Key "SK" this week. Mario and his Betty joined UNWFP in Kampala as radio operators four years ago. Mario joined the UNWFP team as telecom-munications technician in the fast intervention team earlier this year. He was one of the first licensed 5X hams who was active mostly on phone, the satellites and digital modes. He was also the chairman for the "Uganda Radio Amateur Society" for a year. He was also a very good friend of Mats/SM7PKK/5X1Z, Joe/G3MRC/5X1P and Peter/ON6TT/5X1T. OPDX (along with its readers) would like to send out to his family and friends our deepest sympathy.

TS7, TUNISIA (Rare IOTA and New Prefix operation). The Kerkennah Island DXpedition (please refer to OPDX.453) is now active as TS7N through November 28th. This group is the first to obtain operating permission for the prefix TS7 and to be active on 6 meters and the WARC bands. The team has been very active on all bands CW/SSB. QSL via DL6BCF. Check out their Web

page at: http://www.qsl.net/ts7n

V8, BRUNEI. Paul, N4PN, is now active as V8PNA. He has been very active on CW on all bands including the WARC bands. Most activity begins after 0000z. QSL via N4PN.

ZF, CAYMAN ISLANDS. Look for Jim, K4BI, to continue to be active as ZF2MU until November 23rd. Most of his activity so far has been on 10 meters CW. QSL via homecall.

ZK1, SOUTH COOK ISLANDS. Roger, W7VV, will be active for two weeks and be an entry in the CQWW CW Contest as ZK1VVV. Activity will last until December 3rd with operations on the WARC bands outside the contest.

From: Phil (ON4BAW) <on4baw@pandora.be>
> Could you email me the exact pin layout and how to connect my computers PS
> to the 5-din socket of the Motorola.
> It would be very appriciated !!
>
> ON4BAW, Phil

Hello Phil & others,

You will need to find a suitable DIN connector unless you want
to chop the old one off and later explain that to the cable company.

You will need to connect 3 wires.
Each computer is different but you should have some white four con-
ducter plugs not connected inside your computer that are intended for
connection to optional later added units such as floppy drives, tape drives
etc. Determine the pins that have the voltage you need.

Holding the DIN plug (one you need to buy or chop off) which is male so
the pins are oriented up and the indent is down (6 o'clock position)

The following pinout applies.(I reverified prior to writing)

9 o'clock pin is + 5 Vdc
next 10' o'clock pin is +12 Vdc
and the 3 o'clock pin is GND
(12 and 1 o'clock not used)
Also found the shell shield is not connected (did not connect mine)

Solder the pins up and find a way to route the cable out of your computer.
Another person responding to an earlier post of mine simply went to
an available serial plug on the rear of the computer and made the
connections there. Can't give details on this.

BTW my interference (80 mtrs) was intermittent data bursts that coincided
with the data going through my modem. Even when the computer was
unnattended and even turned off . I pulled the modem out prior to writing
this and listened on 75/80 mtrs. The hash was still evident with nothing
even connected to it except of course the wall receptacle. TOTAL JUNK !

Hope this helps you and 73's
Eddie Bryant

This one was the same one as is used to punch the ballots. It's just
a small shaft with a plastic handle.

> votes.

The machine recounts are automatic. Bush knows that hand counts of
IBM punch cards are unreliable. That's why he did not request any.
Gore knows that hand counts are unreliable. That's why he requested them.
Unreliability and mischief is the only way for Gore to win. How can
someone who spouts the "will of the people" want to disqualify thousands
of military votes?

> What about the thousands of disenfranchised Demo. citizens who decided not
> to vote after the networks declared that Bush had won Florida before the
> Florida polls closed?

That didn't happen in 2000. When Bush was declared the winner, the polls
had been closed for a long time.

> Could be (but I think it would be easier to change within various states
> than nation wide), but what do you think of the idea of splitting the
> electorial votes?

They cannot be split fairly. There is no way to split 25 votes 50/50.
What is much worse, however, is that there is no way to split 3 votes
50/50.

When I grow up, I wanna move to Hiram. I wanna live in a shack, stuff rags in the walls to keep the bugs out, and put a rag in my gas tank.
I wanna have a charge account at the local booze store.
I wanna play hide and seek with bill collectors. I hide, they seek me.
I wanna have a stove that works.
I wanna have a wife that works more....

I wanna blame everybody for everything.
I wanna be a bum (oops! done that!)

Little Richie

Power Supply that came with my modem put out all
sorts of HF trash.
Manu: APS - advanced power solutions.
Model # is: AD-715U-2205
P/N is: 62479-03
Output is +5 Vdc @ 1 A
+12 Vdc @ 0.75 A

Tried the aluminum foil trick- no help
My solution:
Connect the Motorola Modem directly to my Computers
internal power supply.
Chunk the old power supply back into its box.

My Motorola modem was not the problem.
The cheap made in Taiwan switching power supply was.

Dwight Stewart (stewartx@sccoast.net) wrote:

: There has been much discussion about the integrity of the ballot
: recounts in Florida.

Supposed integrity.

; The concern centers around the fact that it is
: Democrats doing the recounts in districts which voted heavily for Gore
: (a Democrat).

Please turn on your TV. There must be some reports even where you live
that explains that there is a person from -EACH- party that looks at the
ballot, there are other people that are watching those two people. If
they find a questionable ballot they pass it to -other- people (probably
the actual election officials)..... And all the while there is a glass
wall separating all these people with many-many reporters, photographers
watching everyone.

; Many have wondered whether Democrats can honestly count
: the ballots, based on their own vague interpretations of the voter's
: intent, without introducing bias into that recount.

They have Rebublicans helping them on a 1:1 ratio. They are NOT checking
for intent. If a piece of chad is hanging on by two or less corners it is
a valid vote, if not it is put in a separate envelope and NOT counted!

: In addition to the actual workers doing the recount of the actual
: ballots, the Canvassing Boards in those districts are also controlled by
: Democrats.

Again please, give us the make up of these boards that you have so much
knowlege about.

; Members of the Canvassing Board make the final decision when
: it comes to disputed ballots. Many have wondered whether members of
: those Canvassing Boards can make decisions about disputed ballots
: without allowing their obvious pro-Democrat bias to effect that decision.

Or even their bivious pro-Republican bias.......

: To resolve the concerns, reports are now coming out of a proposed
: compromise that would eliminate potential bias in the recount process.
: The compromise would remove all Democrats from the recount process and
: replace them with Republicans instead.

The ratio is 1:1 right now. Why don't we just remove *ALL* the people and
let the reporters and observers count the votes instead of the people
that are supposed to do it?

>license? Is any portion grandfathered?

All you need to do is show up at a VE session with your Advanced license, pay
the fee, and pass the new 50 question Extra written. The question pool is
available online at a number of sites - in fact, some will generate a sample
test so you can try out your knowledge.

The last time I looked, the VE fee was $6.30. The newapplication form is Form
605, downloadable from the FCC website.

Good luck!

The Motorola AC power adapter caused problems in the very early
products. As long as the modem is at least 2 years or newer, the problem
should be gone!

B.S. (Barbara Streisand) ! One board is counting any impression even remotely resembling a dimple as a vote as long as it's a vote for ALgore, but have explicit orders from the Union Bosses to keep their mouths shut if it's a vote for President Elect Bush.

Another board member was caught taping chad back onto a vote for Bush, another was observed to remove a pile of Bush ballots and place them in with a pile to be counted as ALgore ballots, and yet another board member was caught counting a pile of ALgore ballots twice!

Additionally, the ALgore legions are trying to exclude the vast majority of absentee ballots from our folks in the Military because of post marks- which many times do not happen with military mail. If anybody has a right for their votes to be counted, it's the military people serving their country in foreign lands. As far as I'm concerned, one of their votes is worth 10 of ALgores' welfare votes...

This is not even remotely a count of the ballots, it is a gross and obvious manipulation of the vote by those who wish to retain their power at any cost.

Speaking of Force 12, I just received their catalog today! I was
blown away! Its not a standard item/price book. It is actually
educational!

Anyway, people have been talking about verticles in this thread. I
Highly and inthusiastically suggest you check out Force 12's V-3 or ZR-3!

I have no opinions as I have not operated this antenna. BUT, I'm
impressed with what I've read and the opinion of AA6PW who has run
Force 12 antennas.

They deserve a look!

I'm thankful for my Jewish wife, her Jewish family and for my puppy dogs.
I'm thankful that I have money that I can blow on insanely expensive stuff.
I'm thankful to have a very good job with good people to work with.
I'm thankful to have good, extremely loving parents who are living and not divorced.
I'm thankful that I don't have any detectable cancer.
I'm thankful to have a car that's dependable.
I'm thankful to have secondary skills so I will always be able to work.
I'm thankful that I'm not homeless.
I'm thankful that I'm not always alone.
I'm thankful for birds and all the other animals (except insects and poisonous reptiles)
I'm thankful for green trees, open fields, the ocean and the stars on crisp cold nights.
I'm thankful for all the special friends and opportunities I've had.
I'm thankful to have you as my friends in here, even though we disagree alot.

Dwight Stewart (stewartx@sccoast.net) wrote:
: James Rosenthal wrote:
: >
: > Gore's people are concerened with votes for Gore, Bush decided (or
: > couldn't figure out how) to not have "his" counties votes recounted
: > within the 72 hr time period allowed for such requests. The whole state was
: > automatically machine recounted due to the small percentage difference in
: > votes.

: Bush decided not to have a recount because a recount had already been
: done.

You have an inside line to Bush? Bush's guys didn't seem to know what was
going on as far as Fla election procedures go. Gores guys did.

; There was the initial count Tuesday, which Bush won.

By ~<.02% or so.

; There was a
: recount of all ballots state-wide on Wednesday, which Bush also won. At
: that point, this recount nonsense should have been over (which is why
: Bush didn't ask for more).

Actually Jeb told him he had it in the bag.

: But Gore, on the other hand, continued to ask for more recounts.

As is his right. One candidate down here won by -1- (ONE) vote after a
hand recount.

; He asked for another recount of 19,000 disputed ballots in the Palm Beach
: area (the butterfly ballot nonsense),

I believe the -voters- filed those suits, not Gore. And they did NOT get
a recount! In fact all their double punched votes got thrown out in the end!

; and Bush was still the winner.

I never saw any numbers released specifically on those ~19000 votes. And
any recounts would have been done using the machines since Palm Beach has
not done a hand count in the time frame you are using. (They were still
tied up by various legal opinions on whether they could or could NOT do
one [even though Broward county was/is doing a hand count].)

; He then asked for a hand recount of those 19,000 ballots, and Bush was
; still the winner.

(See above) Palm Beach County has not completed their -hand- recount.

: Then Gore asked for a hand recount of 4,000 ballots
: in still another county, and Bush was still the winner.

I reported this incorectly in another post----
Volusia County, had a -16000 (as in MINUS 16,000) votes cast for Gore out
of 184,000 votes cast. (The newspaper originally said 600 votes cast). So
guess what? Gore asked for a recount. Volusia went for gore ~97k to ~82K.

Broward and Dade county did a ->test<- (hand) recount of ~1% of the
precincts (one or two ONLY) to see if a complete hand recount was
warantted. Broward had ~563,884 votes cast, so 4000 would be "about"
~1%. The vote was 386,6512 for Gore and 177,323 for Bush.

Dade decided (at first) to NOT do a complete -hand- recount, Broward
decided to DO a hand recount of all the precincts. Which STILL has NOT
been completed.

: And, now, in spite of all those other recounts, Gore is asking for
: still another recount - a hand recount of all ballots in Florida
: districts which tended to vote for the Democrats.

You expect him to ask for a recount in Bush counties? That was up to Bush
to do (if they could have figured out what <=72 hours meant.).

; And now, if that
: recount still shows that Bush is the winner, there are hints from some
: Democrats of even more recounts in still other districts, or possibly
: even in the whole state.

There are "hints" that people are eating/snorting chad. There are hints
that people are stealing voting machine days -after- the election is over
so they can hand out prepunched cards to old ladies w/o their glasses.

: This endless recount nonsence has to end.

You're right, get your facts straight and stop posting nonsence.

; At this point, there is no ligitimate reason to continue the recounts.

Which court do you preside over?

; In fact, the only reason to
: continue the recounts is to manipulate the election so Gore can steal
: the presidency.

Yawwwwwnnnnnnnn.

The "only" reason to NOT continue the recounts is so we don't find out the
true count of the ballots. And to stop your whining.

: Dwight Stewart (W5NET)

Dwight, calm down. It will all be over in a day or so. Then Bush will
start drilling in a Park near YOU.

I am a white Jew which might confuse Lloyd who doesn't understand the
difference between religion, race and nationality. Lloyd, don't you
understand that you are what you are BY CHANCE? That's right; all your
boasting about being white came about by chance. You had nothing to do
with it. NOTHING. The same for a man of color so is he less of a human
because of it? He too is non-white due to chance. Get it. And so what
right does anyone have in developing a superiority complex over
something he had no control over? But Lloyd, don't you go out in the
sun to get tanned like the man you ridicule? Or do you sit in a
basement all day and night to get whiter?
You are thankful for not being a Jew yet you dissasociate yourself
from Christmas because you question Christ's birth on Dec.25th and
then intimate that that date marked a pagan holiday. Now look into the
roots of Judaism and you'll see absolutely nothing that smacks of
paganism so why are you anti-Semitic? If anything we are the light and
truth as differentiated in your own terms from paganism.
You still hate homosexuals? You have a great sex life to brag about?
If so, tell us about it.
Wow, am I glad I'm not you or think like you but have a nice turkey
anyway.

Hans,

Sorry you had such a run of trouble, I beat you out. I blew up my amp
last week. hi hi. But thanks for the qso in the sweepstakes.

I was section hunting, got another clean sweep. Thats cw and phone
this year.

Take care.

Netscape does support kill filters.

Go up to Edit, and look for the selection that says "message filters"

Regards,

Mark

Additionally, this week's edition of "This Week in Amateur Radio" had a segment on this topic. I believe that they also included other URL's that you should check out. Go to their web site (www.qsl.net/twiar) and look for this week's program text.

If your decision is to get out of the hobby, that's your decision. Just a few comments before you go.

Have you ever considered that ham radio could be MORE than talking on a radio? Is that all you sought from the hobby? How about the <<Learning>> that ham radio has to offer? Do you *know* the satisfaction from building something and having it work--something you found in a magazine and tried? Something you, perhaps, didn't know how to do before, but because you did <<that>> project, you gained knowledge/experience you could use in a future project?

Do you know the thrill of working a rare DX station you never heard before on an antenna YOU constructed? How about making something that <<DIDN'T>> work, but taught you a lesson about how "not" to do it in the future?

You actually sound like one of the VHF only crowd who has only heard the morning drive-time on the local repeater, or the coffee clatch that motors out to Hardees. Have you REALLY given Amateur Radio a chance to show you ALL it has to offer? No flames intended, but I seriously doubt you have ever ventured beyond the local 2 meter repeater which may or may not be populated by a group of "snow-bird" retirees. Got news for you: I have NO patience for this kind of conversation nor time to listen either--and I am near my mid 50's. I am lucky to be quite robust and cannot sit still over a cup of coffee (Yech!) postulating about my surgerys, or aches and pains. There's too much of life still to experience to live like that--and too much Ham radio to explore.

All I am saying, Henry, is for you to look at ALL of ham radio, not just the 2 meter old-buzzard crowd sitting around criticizing them dadburn whippersnappers and telling how it was in 1950. Explore other bands, look at ALL the kinds of communications, as well as the educational opportunities offered. Then if you still don't like it, it wasn't for you in the first place.

I have a Yaesu FT-530 (early model) and I modified it to expanded receive
and it has worked great all these years.

My lithium battery recently apparently failed and its memory was messed up
(I've been meaning to change that battery :), so I was forced to reset the
radio by holding MR & VFO while turning on the radio. I wasn't getting
expanded receive anymore so I then held the Up & Down arrows while turning
on the radio to re-enable the mod (I believe that is how it was done) but I
cannot get expanded receive anymore!

Why isn't it working? What am I doing wrong?

Thomas Jefferson called our system of government a "representative
democracy". You are wrong about this being some modern and incorrect
use of the term.

... Erich

--
"I consider the war [of 1812]... as 'made on good advice,' that is, for
just causes, and its dispensation as providential, inasmuch as it has
exercised our patriotism and submission to order, has planted and
invigorated among us arts of urgent necessity, has manifested the
strong and the weak parts of our republican institutions, and the
excellence of a representative democracy compared with the misrule of
kings, has rallied the opinions of mankind to the natural rights of
expatriation, and of a common property in the ocean, and raised us to
that grade in the scale of nations which the bravery and liberality of
our citizen soldiers, by land and by sea, the wisdom of our
institutions and their observance of justice, entitled us to in the
eyes of the world."

I would be thankful for a kill filter if Netscape supported it.

I am thankful that my radio gets stations other than those that
carry Bo Gritz, Profit Stair, Alex Jones, Hans Turner, and
their repulsive ilk.

I am glad that I was NOT born "white" because that minimizes
the amount of genetic material I might have in common with Lloyd.

G'day guys. I have just made a new ham radio website. I need a bit of a hand from you guys.

If it is possible, could i trouble you to go visit my site (http://www.aussiehamradio.cjb.net) and email me your website and any other useful links you have and I will stick them on there. Also, if you want you can post your antenna designs or whatever and I will stick them up as well.

Also, I am offering subdomains off my address. Eg.
www.YOURCALL.aussiehamradio.cjb.net
all ya need to do is email me with your callsign and web url and I'll set up an automatic re-direction.

anyway, Ill leave you guys to it now.

'73's Lach.

Group, et al.;

I'm selling out of the 2 meter game.

FOR SALE;

*KENWOOD, TH28A, (small, 2 meter, transceiver), 5 watt.
*KENWOOD, Speaker/Mic. VOX, headset/headphones, etc.
*ASTRON, RS-7A, 13 VDC, 7 Amp., power supplies, 2 ea.
*MIRAGE, Mod. B-23, 30 watt, 2 meter, amplifiers, 2 ea.
*MICRONTA, VHF/UHF power and/or SWR meter, for 2 meters
*All Manuals, Schematics, cables, connectors, diagrams, etc......

All the equipment is in original containers, in good operating
condition and is practically as new.
If you are into Amateur Radio on 2 meters, I have a very good
offer for you. E-mail me if you're interested. We are located
in Maryland, near Baltimore and Wash., D.C.......

Have a GREAT THANKSGIVING !!

Daddy Dave, KE4JIO -- ex K5RHO, K3ZNJ, ET3USA, ET3USF, N3LPU

I think I am going to get out of the hobby Its just not what I thought. Most guys I speak with are way to geeky for me. I went to a couple of meetings and everyone wore hush puppy shoes that went out years ago and had pencils in their shirt pockets. I also found them to be very cheap. Is this a trade of ham radio operators. On the 2 meter repeaters I listen to all they do is talk about finding a cheap restaurant Come on fellas Ya only live once. I myself get tired of McDonalds and Burger King I like good quality restaurants. Also so many conversations have to do with their ailments and visits to Doctors offices Why do I have to have my ham license to listen to this. Time to go into another hobby Sorry to my elmer who spent so much time with me but I hope you understand

Call: K0HB
Class: SO HP
Section: MN
Operating Time (hrs): 10

Summary:
Band QSOs
--------------------------------
160: 0
80: 15
40: 95
20: 156
15: 335
10: 94
--------------------------------
Total: 695 x 79 = 109,810

Club: MWA

Comments:

Contest started great, nice run on 15, 20 was kinda
slow so went to 40. Forty was simply magic -- rate
meter immediate went to 140-150 and stuck there -- this
is gonna be fun!

Then Murphy found my QRG! Big time! Trusty NCL-2K went
down with a bang and a puff of (foul smelling) smoke.
Plate transformer fried! Spent 5 hours of prime
time pulling transformer out of "spare parts"
amp and installing it. Ugly -- old brittle wire --
undocumented mods -- you get the picture!

Soldered the last connection and fired it up --
WHAT THE HELL WAS THAT NOISE? Full scale Ip trips overloads --
Spare xfmer has bad screen supply windings! No more spares.

To h--- with it! Went to bed at 3:30AM with shack
full of assorted smelly parts, tools, hot soldering
irons, and two gutted amps.

Got back on air late morning limping around barefoot,
and heart no longer in it. Too old to count on a miracle
comeback. Quit early. Thanks for all the fish.

Looking for a late model full-legal-limit amp.
Make me some offers!
```

WTF! Thanksgiving has nothing to do with Tolerance!
It has to do with shoving lots of food down your throat and being thankful
for what you do and don't have. Tolerance!?! Where the hell did you get that from?!?

I'm thankful that hate mongers and paranoids like you usually can't spell
well enough to appear intelligent!
Maybe you had a Jewish English teacher and are still blaming her for your
own shortcomings. Maybe the bus driver was black and you've deduced that
THAT'S the reason you're still a functional illiterate.

Get a life!

You've really lost it this time, Jeffy. Would you please explain to me just exactly how it is that AOL can exert any sort of control over messages which reach you via telephone or postal mail?

I'm sure they're having as good a laugh as I am over this whole matter. They know as I do that I have engaged in no "stalking or threatening behavior."

You have two choices here: either admit that you have made a mistake or offer proof to back up your accusations.

In other words, show some proof that I am engaging in "threatening phone calls, threatening mail, stalking, or threatening behavior", or take this opportunity to recant your baseless accusations.

Really???? Hole punches come in all sizes and shapes, not that it
matters. If a dimple or a pregnat chgad can count any size or shape of
hole surely could be counted.

>

While not really necessary, it was initially used to avoid confusion with other callsigns that might be said during a conversation. In other words, it is short for "this is my callsign as opposed to any other callsign I might have said." Of course, for many people, it has just become a habit, said even when no other callsign is mentioned during the conversation.

A lot of things we do in this world are based on habit and tradition.

Dennis,

I am finding out that finding a FM board for that radio is like finding the mising link. (g)

I have a Yaesu VX5 that will do 6 meter FM amd will also drive a 6 meter linear I have so I can get by.

Thanks for your info!

Not only does (may) it create problems with our frequencies, more likely, it will create problems such as "bad picture" with THEIR frequencies and they will soon be out to check as THEIR customers will be the ones with the peeves.

Also, usually they use very well shielded cables for this type of run and you are very lucky if you get a "direct" optical fiber run into your home which would cause no bleed at all.

In my area, we are two blocks from where the optical "downloads" to RF.

You got that right! I like eggs for breakfast a lot better than on my
face......

>The fee is $6.65 for calendar year 2000.
> Furthermore, the form 605 that's on the FCC's web site is not the same one that
> is used for testing; it's for renewals, address changes, vanity applications,
> and such. Most VEC's use the NCVEC-605, but some don't.

Thanks for the updated info. The process is actually simpler than I described
- no need to get a Form 605 of any type, because the VEs have the right ones
at the session anyway.

1605. Phila PFF Notification Net

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-21 00:00:00 UTC
From: pff46@my-deja.com
Message-ID: <8vdmht$8lj$1@nnrp1.deja.com>
Source record: 99284

Hopefully by now everybody has the frequency
of Phila PFF Radio - if you don't, it's 452.725
PL 203.5. We are the Delaware Valley's only NEWS
& Fire Notification Network and we are sponsored
by a few Major News Networks. Any time of the
day,if something major/newsworthy happens in the
Delaware Valley, chances are great you will hear
it on PFF Radio!
We now have 35 dispatchers scattered
throughout the Phila., SEPA and SNJ area. If you
have any interest in public safety radio, & would
like to jump in on the fun, just email me at PF-
71@webtv.net .
We are a FREE service - all you need is a
UHF 2-way radio. Give us a listen, alot of our
members are responding to the scenes of incidents
(we usually have multiple people covering an
incident from all angles).

1607. Line noise

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-21 00:00:00 UTC
From: jefff_b@my-deja.com
Message-ID: <8vdq6k$ba0$1@nnrp1.deja.com>
Source record: 99286

I get a fairly chronic (much nore "on" than "off") level of a particular noise all up and down the bands (but moreso on HF) that doesn't show up during the summer months. It's the kind of noise that you'd get with a hot air furnace motor or other type of heating motor, and this is what I've tentatively concluded is causing it. However, I've "sniffed" the neighborhood several times to see if I can localize it, and failed utterly. I've worked with a Timewave ANC4 over the last few days to see if I can null this noise out, but found that no matter what I hook up for a sensing antenna, it doesn't pick it up. This has led me to wonder if I'm dealing with this noise coming into the radio via the power mains, rather than the antenna. I'm wondering if anyone has found similar situations with their station setups and locations, and if they've gone the route of power line conditioning/filtering, and whether anyone is doing it with balanced power (+60/-60, rather than what hits from the mains).

I've found that there's a preponderance of power conditioning equipment around for high end audio, pro audio, and broadcast, (most notably a company called Equi=Tech) but I haven't found anything that might be more applicable to ham radio. Perhaps someone out there has already "been there, done that" and has some info I could use?

My 2 cents on Butternut. Excellent antenna and great service from the manufacturer. Based, on what I read, I won't be buying any Cushcraft products. No support and no parts? Sounds like they did not learn from the Japanese very well.

Regards,

Duffy - WB8NUT

Good luck !!. The Alabama Power company engeerneer told me the problem
was in my antenna (1/2 wave coax fed dipole), it needed grounded and
the noise would go away.

And he was right....I grounded that thar center conductor on that thar
coax and it all went away. Amazing.

Go to the arrl.org site and search out Power Line racket. Read and
learn. Then copy it all and teach your 'engeerneer'.

Have fun.

hey jeff
i would suggest calling your electric company they have methods for checking there lines for noise and stuff more than likely thats what your problem is is a dirty insulator on a pole somewhere or a loose connection on a pole somewhere either would give you a nasty noise most electric companies are happy to check it out cause it alerts them to a problem before it actually blows up on them
good luck

1624. Simplex range question

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-21 00:00:00 UTC
From: rec_radio_amateur_id@my-deja.com
Message-ID: <8vecp1$rl0$1@nnrp1.deja.com>
Source record: 99303

Does anybody have any rough estimates on how far you can talk simplex mobile to mobile from one 50 watt 2m rig to another running full power over gently rolling heavily forested hills using 1/4 wave ground plane mag mount band 2.6db gain antennas? Will 10m mobile to mobile each running 25 watts (with appropriately tuned 10m antennas) provide better results since it is more likely to exhibit ground-wave propogation? Or will it be more likely to be absorbed by the thick vegetation due to lower RF energy? I am interested primarily in simplex communications with another amateur (General Class) who has an all-band hf/vhf/uhf mobile rig running 50 watts. I can't afford such a rig and am trying to decide to go either with an HF (I am currently studying for my General Ticket Upgrade) rig or a VHF/UHF dual-bander.

Thanks in advance

The discone has about the same gain as a ground plane antenna, is vertically polarized and has a broad frequency range. However, it may not have low SWR on all of it's frequency range, unless you use low loss coax. The Radio Shack performs pretty well, actually. Me, I'd go for the Diamond. Hope that this helps.

A friend has set up a web site for me to sell off a 29 year accumulation
of electronic components including:

RF power and other transistors, RF I.C.'s,
Minicircuits mixers, ceramic 455kHz and 460kHz filters,

Variable capacitors, both panel mount shaft type and trimmer
variable inductors and coil forms, RF feedthrough and standoff capacitors,

High voltage: VACUUM RELAYS, RECTIFIERS, resistors and capacitors,

Other capacitors including, Photoflash, polypropylenes, tantulums,

Switches, such as foot switches and industrial limit (micro) switches,

Ferrites cores, Transformers and inductors,

Transistors for power audio amplifiers and television deflection,
Super fast (35ns) 1 and 3 amp rectifiers, and lots, lots more.

In article <8vd4dc$mf1$1@news.hawaii.edu>, jeffreyh@Hawaii.Edu says...

>You've stated that I place laws above the people they're supposed to
>protect, and my response is always that I place laws above those who
>intentionally break them. Law-breakers are dirt. If that makes me a
>Tory, then so be it.

By your own definition, then, Rosa Parks, as well as others who practiced civil disobedience to achieve reform, are dirt. By that same definition, Congress is (or should be) dirt for their passing of legislation that has effectively made the Tenth Amendment null and void.

...or the twelve-year-old girl in Washington D. C. who was taken away in handcuffs last week. She was sentenced to counciling and perform community service. Her Crime? Eating french fries. It seems D.C. felt the need to pass a "zero tolerance" law for eating on its subways and subway stations. This is supposed to control litter and keep the subway clean. I compare this with trying to cure dandruff by decapitation.

Sergeant Myron Pryor felt the same way as you. He's the one believed by many (and later aquitted) who gave the order to fire on un-armed students at Kent State on May 4, 1970, killing four. All because of a peaceful anti-war rally that declared illegal on a spur of the moment.

A nation that represses its people by continually making laws that are unjust or unneeded, doesn't deserve to have any law abiding citizens. Roman statesman Marcus Cicero once said, "The more laws, the less justice."

>I'm off to L.A. tomorrow and will be QRT from the NG until Sunday
>(long Thanksgiving weekend). Don't talk about me behind my back
>while I'm gone!

That reminds me of a recent announcement at a packed football game in which the announcer said that booing is no longer permitted.

I have Cox cable. Bought the modem/install package at Comp-USA where I phoned Cox and they installed the next morning at 8am! I was very surprised and pleased.

I have the SURFboard by Motorola and no problems yet with RF noise.

BTW if you plan on networking your in house PC's I just bought a pair of Intel "AnyPoint" home networks which use existing single line phone wiring in house for LAN.....works great but had a little trouble installing software.

HARUMPH! The folks that go around mocking southerners (usually those who live in ivory northern towers) seem to forget something. I seem to remember the Fed having to bail out some of them thar yankee cities (Noo Yawk 2 times) and railroads that went busted (Penn Central became Conrail). Y'all just 'member this h'yar. We might talk funny, but I ain't never heerd tell of a Southern city goin' broke NOR a southern railroad. Kin ya show me one that ever did? Kin ya show me a bankrupt southern-based railroad that went on the Federal dole? No ya cain't. Not only that thar, when Conrail became a guvmint run corporation, them yankees got the thang so messed up, they had to recall a feller from re-TARmint to show 'em how to run a railroad. Know who hit wuz? His name was L. Stanley Crane, retired CEO of SOUTHERN railway! Under his lead-ership, Conrail was placed on a solvent footin' and eventually was able to go it alone, ultimately purchased by two private rail corporations---Norfolk Southern and CSX Corp.

So y'all set up 'ere a-mockin' us southerners while "youse guys" ponder this: In the State of North Carolina, and I believe, several other southern states, it is illegal, agin th' law, and whutever to deficit spend. If there occurs a deficit--and it has happened--the state MUST take measures to cure the shortfall. Now tell me, if we 'uns is so much dumber than you 'uns, how come we don't seem to have trouble keeping our govmints and railroads outta th' red? Hmmmmmm? LMAO!

73 to all,

Jerry

The main problem here is that Republicans operate in a principled manner, unfortunately they are in a contest with people that principals mean nothing.

These are the same folks that are quick to tell you there is no God and then use bible scripture against you.

It is my opinion that if Gore steals the election that he will not live through his term of office.

>
> ... Erich

"representative democracy" is a poor way of saying "republic" (and quite
obviously an oxymoron). It is used by those who refuse to accept the fact
that the US is not, never was, and never will be a democracy, whether
pure, social, or imagined. As defined a democracy is direct rule by the
people by way of majority. Some call it "mobocracy".
On the otherhand a republic is indirect rule by the people through a
representative government consisting of a Legislative and Executive
branch. Republics cannot have a monarch as a ruler, but does have an
elected offical with the title president.
Take, as an example, the current presidential election. One candidate
will have the popular vote, another the electoral. The candidate with the
most electoral votes, as we know, becomes president. This would NOT
happen in a democracy, as the people have direct influence, by majority,
on the outcome of an election.
The republican style of rule under which the US was founded is there to
attempt to take out the factors of bribery and emotion in the election
process which would most likely be considered factors in a democratic
style of rule
(Of course, we know this does not always work!).
Current dictionaries list "representative democracy" and even "democracy"
as "rule by the people indirectly". This is incorrect and only recently
has this become the norm.

You're right. Dictionaries do disagree with your definition. Our
democracy seems to be defined under number 1...

deï¿½mocï¿½raï¿½cy (dï¿½-mï¿½kï¿½rï¿½-sï¿½) n. pl. deï¿½mocï¿½raï¿½cies 1. Government by the people, exercised either directly or through elected representatives. 2. A political or social unit that has such a government. 3. The common people, considered as the primary source of political power. 4. Majority rule. 5. The principles of social equality and respect for the individual within a community. [French dï¿½mocratie from Late Latin dï¿½mocratia from Greek dï¿½mokratiadï¿½mos people; See d ï¿½- in Indo-European Roots. -kratia -cracy]
d ï¿½-. Important derivatives are: democracy epidemic demon tide 1 time To divide. Contracted from *da ï¿½-. I. Suffixed form *d ï¿½-mo-, perhaps ï¿½ division of society. ï¿½ DEME , DEMOS , DEMOTIC ; DEMAGOGUE , DEMIURGE , DEMOCRACY , DEMOGRAPHY , ENDEMIC , EPIDEMIC , PANDEMIC , from Greek d ï¿½mos, people, land. II. Variants *dai- , *d ï¿½-, from extended root *da ï¿½i-. 1. Root form *dai- . GEODESY , from Greek daiesthai , to divide. 2. Suffixed form *dai-mon- , divider, provider. DEMON , from Greek daim ï¿½n, divinity. 3. Suffixed variant form *d ï¿½-ti-. a. TIDE 1 ; EVENTIDE , from Old English t ï¿½d, time, season; b. TIDE 2 , from Old English denominative t ï¿½dan, to happen (< ï¿½ to occur in time ï¿½); c. TIDING , from Old Norse t ï¿½dhr, occurring; d. ZEITGEIST , from Old High German z ï¿½t, time. a, b, c, and d all from Germanic *t ï¿½diz, division of time. 4. Suffixed variant form *d ï¿½-mon-. TIME , from Old English t ï¿½ma, time, period, from Germanic *t ï¿½mï¿½n-.[Pokorny d ï¿½-175.]

>them. You're such a stickler for laws and regulations, I'm sure you'd agree
>with this.

Funding and manpower are the problems confronting the FCC. That agency
is spread out so thin now that enforcement is a very low priority. I'm
sure our resident former FCC official, Mr. Kane on .policy, will be the
first to agree. QRM to public safety and aircraft channels are surely
high-priority items; QRM on 10m probably ranks below the 80 and 20
meter messes.

>It's much more satisfying to expose him for the Tory he is, right here
>in public.

You've stated that I place laws above the people they're supposed to
protect, and my response is always that I place laws above those who
intentionally break them. Law-breakers are dirt. If that makes me a
Tory, then so be it.

I'm off to L.A. tomorrow and will be QRT from the NG until Sunday
(long Thanksgiving weekend). Don't talk about me behind my back
while I'm gone!

73 and Happy Thanksgiving,
KH6O

I am searching for CURRENT beacon frequencies for the 6 - 20 meter bands. I have found some 6 meter and a couple of 10 meter lists but they seem to be outdated.

Thanks!
Mike

> problem with those exams.

You have to be a complete idiot. First you promote the fact that there are 9
year old kids that have extra class licenses. Then in a latter posting you
basically say that all those 9 year olds did to get their licenses was to
memorize the content in order to get the license, which really doesnt mean a
thing about what they truly can comprehend because of the fact that they are
only 9 years old. ATTENTION; ATTENTION; Earth calling Leland: Memorization
is the key to understanding what one is trying to memorize.

How come you cant memorize the same stuff these 9 year old kids are
memorizing in order to get your extra ticket? You condemn CB and promote
Amateur radio yet you dont even have "the right stuff" to go out and excel
in the hobby you are promoting so vigorously. Are you going to stay at the
bottom of the amateur radio rung forever? Whats holding you back Mr.
Would-Be Extra?

Well,

I THOUGHT he was losing, but it seems as if they are going to keep
counting, counting, counting until the DemocRAT wins. Regardless of
my own party affiliation, I find the whole thing smelling of long-dead
fish. Never have I seen such a blatant effort to "fix" an election.
At this point, I think it has not dawned upon the "counters" in Fla that
when they get the thing to come out the way they <<want>> it, their
"plastic-faced" candidate will never quite get the support he would've
otherwise. There will always be that sneaky (pun intended) little ques-
tion: Did he REALLY win Fla?

Jerry

As can be seen on:

http://www.arrl.org/news/stories/2000/11/21/3/?nc=1

At the January, 2001 Board meeting, the ARRL Board of Directors is going to consider ARRL's policy position wrt Morse code. Those that would like to make their views on this subject known to their ARRL Division Director should do so before the January Board meeting.

See:

So I will ask you the same question I already asked two others. Would YOU
recommend a 9 or 10 year Extra Class ham to stick their hands inside of a
high power tube amplifier to work on it unsupervised? That is what passing
the Extra Class exam implies they are qualified to do. Do you really think
they would know what they where doing?

What about the fact that the discone is basically a compromise?

Why not make a jpole or something for whatever band you want?

With 50 feet of 10ga wire you could build a boatload of jpoles, and make em for any frequency you need. That sure is better than 39.95!

73 Doug

When truth is twisted, it becomes propoganda. Ask the survivors
of the Holocaust if propoganda hurts.

Have you no pride in yourself that you indulge in this gloating,
sneering, propoganda as the only way to make yourself feel better
about the criminal activity in Florida?

Al Gore is pushing this country into a civil war. I wish I could
say that such a war would be a struggle of good versus evil, and
that I would be happy to see you again over my gunsights. Anyone
with two brain cells to rub together would be appalled at this
continuing effort to sunder the nation. I am. No amount of
propoganda will change that. Perhaps it will obscure the truth,
though. I pray that the people of this nation, both Democrat and
Republican, liberal and conservative, gun owning or gun hating,
will use the mass of neurons they were gifted with at birth to
try to make wise decisions, and make this nation and this world a
better place.

With comments like those below, however, I'm expecting to be
disappointed.

To what end? Isn't the ARRL basically just a large club? They don't
actually have any say in the matter do they? I thought the FCC actually
made the rules.. Please show me what I am missing here because if I think
it will do any "good" I'll express my opinion. Otherwise, if I'm just
throwing my two cents into the pile, I'll keep it to myself.
Thanks.

It is still modern and incorrect in the way it is used. It is still an oxymoron.
Though I will stand corrected that it was never ever used before modern
times (is that what I said, really?). In notes written by Jefferson
before and after the one you quote, which is one of very few times I can
find that he used the term, especially compared to the pure terms
"republic" and "republican", he has
stated his distain for the way the governmental structure was shaping up.
This was the first time a "pure republic" as he called it was being
developed and there were flaws in the system. He also received letters
from foreign dignitaries (sp.) asking him how he could use the term
"republic" when refering to the US and was puzzled as to what he should
call it. Was this why he began using the bastardized term "representative
democracy"? Don't know.
You will also find times afterwards where his frustration was growing,
especially with the exhisting branches of the government, and specifically
with the senate and military where he felt their system of "election", or
more correctly "appointment" went against the republican thinking.
I guess we can sit here and site individual cases where one term or
another was used, but I assure you "representative democracy" will not
come out ahead. It is still an incorrect term and should die a horrible

death. Our founding fathers had no intention of the US being a democracy in any sence of the word. The US will always be a FEDERAL REPUBLIC and I will always be a STUBBORN BASTARD. Thanks for the discussion, it made me pull out the ole' books on T.J.!

:>
:> "It should say something to the American people that Bush prevailed in a
:> Texas town where a blackman was dragged to death, in Oklahoma City where a
:> federal building was bombed, and in Montana where a gay man was tortured
: and
:> killed".

What can you expect from someone who supports a candidate who got 90% of the vote in DC, the city with the highest crime rate in the nation, who was the VP of a president from Arkansas, the least literate state in the nation?

Did Gore win in Idaho, the place where FBI agents shot a boy, his mother, and even the family dog because their father sold a sawed-off shotgun to the Fed who payed him in advance for it?

How did Gore do in Colorado? The state where two teen students decided to see how many they could kill before committing suicide?

I'm pretty sure Gore took California. Remember California? Where some screwed up f*** shot a bunch of children because they were in a Jewish day camp, then killed a postman for looking foreign? Hey, maybe Gore had something to do with the San Ysidro mass murder in the McDonalds restaurant in the 80s. Gore won in my home state, New Mexico, where we had a drug-related robbery turn into a mass murder not too long ago.

My guess is, the CNN hack he was talking to just sighed and said, "Yeah. Can you believe it?"

CNN is based in Atlanta. Remember Atlanta? The Olympics? The bomb? The FBI trying to force some poor slob to confess?

Of course, Florida will be the key. Remember Florida? Where Elian was seized by ninja-suited, automatic weapons-armed Feds? Where Ted Bundy was fried? Where Janet Reno got her nazi training? Need I dredge up EPCOT????

Of course, the micronad noxious little cretin who said that about Bush won't read this. But do those of you who are on his side of the political aisle feel any pride for yourselves or your party?

The rest of us aren't picking up any pride. All we're getting is bitterness, hatred, and jealousy. Seriously, you've got to pull the weed out of your asses.

A mass grave was discovered in 1992 containing 49 deceased Disney characters, including 12 dalmations, the entire "Aristocat" family, and Charlie, the Lonesome Cougar. Right under the EPCOT dome!!

Michael Eisner disavowed any knowledge, but kept it real quiet. Belle, star of _Beauty and the Beast_ claims to have actually consumed part of Sebastian, of _Little Mermaid_ fame.

Timon and Pumbaa (_Lion King_) have been known to go on drunken rampages through Orlando gay bars, even taking Baloo (_Jungle Book_, _Tale Spins_) along.

And everyone knows that Mickey and Minnie got divorced because Donald says she was f***ing Goofy! It's Babylon in Florida!

I've heard that Bill Clinton once hit up on Daisy, requesting that she "keep the gloves on."

I recently moved, so I figured I better inform the FCC of my new address since the old one pops up on "call sign lookup". So, after 3 HOURS I finally completed a online Form 606, complete with TIN and password. (whew)
Anyway, I also have a "2nd class radiotelephone" license. How do I notify the FCC of my new address for that? Enter the 2 letter/7 digit license number as a call sign? Or is there a different form for that? Or do I have to notify them at all?
Also, how long before the new address is listed?

I just listened to Allen Durscherwitz state that the attention span of the American voter was 6 days, and everyone will forget about the chad once Gore is in office.

The area where I live is populated by "good ole boys", I am here to tell you that my observations show that Gore has set back civil rights by 20 years. He may be proud that he has succeeded in removing the term "Nigger" and replacing it with "God Damn Gore Voters". I am also picking up an animosity towards Jews that I have never heard expressed before. I suspect that the New York and Washington lawyers have under estimated the hatred they have stirred up in some of these folks. My comment about him living was based on the fact that once you stir up some of these folks the consequences can become disastrous. One can be sure the ranks of the KKK will swell. Mores the pity...

I had a laugh with it (even posted it to my collagues)

This was a very fine posting with a highly historic background.
Everyone that was offended by it somehow, should consider to
visit a shrink. In the light of the debate of your presedential
election, it was a good posting.

For that 1th and second amendment, I can't respond. Probably has
something to do with bows and arrows :)

Mark,

It appears that this is a "feature" of Linux Netscape. I
rebooted into Windows and found that indeed it does support filtering
for that operating system. In Linux the filters box only allows you to
apply filtering to your inbox. This is also propagated into the new
Netscape 6, which at least in its Linux incarnation, seems to be a huge
step backward from 4.7x.

>To what end? Isn't the ARRL basically just a large club?

It's a lot more than that. In the area of rules & regs, the League is a sort of
lobbying organization. That's a good thing for the ARS.

> They don't
>actually have any say in the matter do they? I thought the FCC actually
>made the rules..

The FCC makes the rules for civilian US radio. But they look to the ARRL and
other ham groups for input and information. As the largest and perhaps oldest
amateur radio organization, the ARRL's policy carries a lot of weight.

But the international treaties which govern radio are decided at World Radio
Conferences of the ITU. How the USA and other countries vote on the treaty is
influenced by the recommendations of the ARRL and other nations' amateur radio
societies.

As just one example, do you recall what the original FCC rules concerning RF
exposure were?

>Please show me what I am missing here because if I think
>it will do any "good" I'll express my opinion. Otherwise, if I'm just
>throwing my two cents into the pile, I'll keep it to myself.

Without strong representation at the national and international level, amateur radio would soon be legislated right out of existence.

The ARRL Board of Directors formulate policy based on input from members. If they get lots of input to change the treaty and eliminate the treaty requirement for code testing, their policy will be to recommend such a change.

It was an idea that the FCC could NOT implement and comply with treaty obligations which presently require Morse Code ability for access to frequencies below 30 MHz. As for it being a dumb idea, well, let's note that amateur radio doesn't seem to have decayed as all of the naysayers originally claimed if 20 wpm and 13 wpm went away.

Since midnight on election day, Bush has never been behind. Why should he concede? Although the Florida Supreme Court could have taken the high road, they obviously chose to violate the principle of separation of powers between the branches of government and made new laws. They didn't like the statutory deadline so they arbitrarily and capriciously set a new deadline which backfired on them. Their job is to *interpret* the law not *make* new laws.

Why does Gore like the hand count request deadline so much and dislike the vote reporting deadline so much?

Did you actually *read* the decision? [It's available all over the web.]

Somehow, I don't think so. The court only considered existing law and
said that the most recent statute applies. It did not legislate, as the
court's decision clearly proves to those who want to take the time out
to actually read it.

Stop parroting the party line. That way you won't be quite so surprised
when the U.S. Supreme Court rejects the Bush stance.

As big a fan as I am of Netscape, 6.0 is a major disappointment in
its Windows incarnation, too. Not only is it a HUGE program, but it
consumes so much of the systems resources just to contain, that it
runs slowly. Couple that with and endless array of graphics choices,
and visual clutter, and even AOL looks sleek by comparison.

If you're going to try to stir up conflict, you need to get your facts straight. First of all, Bush didn't "trash" anybody. Perhaps the Democrats are upset with what Bush is doing, but Republicans in Florida and around the country are strongly in favor of his actions.

Second, the election laws existed in Florida long before any of those Supreme Court Justices stepped foot into that Supreme Court building, yet those Justices abused their power to change those laws so that their desired candidate might win. Because of that, those Justices are beyond contempt in my opinion.

> [snip] Bush ignored his resounding loss
> and effectively declared that he considered
> the Florida Supreme Court's decision
> to be meaningless. [snip]

Nonsense. To appeal to a higher court is not a declaration that one considers the lower court's decision to be meaningless. Yes, it might mean that you consider the decision to be stupid and biased, but certainly not meaningless.

> [snip] If Bush pursues this reckless and
> lawless course, he will set off riots in
> the streets of Florida - and the United
> States. [snip]

So?

> It is time for all honest and law-abiding
> Americans to rise up and demand that Bush
> concede NOW.

Its not going to happen - most of the "honest" citizens are supporting Bush, and many of Gore's supporters are probably too busy planning the riots you mentioned above. :-)

More precisely it continued to decay at essentially the same rate. The number of Amateurs with any HF phone is declining, the number who have a code test at ANY speed is declining. Keeping the numbers up is the codeless Tech which have never expired yet but which have an average life to expiration below the 60 months that would indicate growth.

If you are implying that Restructuring was a wet firecracker, you are 100 percent correct. Pumping bullets into a dead horse doesn't make it any deader.

Bush's comment was not becoming a man who has any intent to govern. But we knew he was a little short in the brainbox to begin with, a not altogether bad feature in a Pres. We got two zeros in '00 for dead sure.

Thanks be that the Florida Supreme Court can issue advisory opinions and help sweep the suds toward the drain. Most states could not.

If Bush has any idea that any Federal court is going to be involved, he is an idiot. But then again that is hardly news.

With the major issue in the Senate being Strom Thurmond's pulse rate (closely followed by Jesse Helms') and the 2002 election already starting in the House, we will be lucky if the fiscal 2002 budget is done by 2004. Any idea of bi-partisan legislation will effectively mean that once again we find that the Democrats are capable of government while Republicans are not. All the Dems need to do is wait for 2002 and help the inept, corrupt Southern Republican leadership look like the horse's patoots that they are; as usual, the Dems will step in to keep the idiocy from becoming really dangerous.

In the meantime, I will dust off my Jesse Ventura sign -- he is a guaranteed landslide in 2004 --
and plan on getting my political news for the next four years from the History Channel.

Message-ID: <oKcT5.24217$n9.1747189@newsread2.prod.itd.earthlink.net>
Source record: 99201

I recently purchased an ICOM-251A at an estate sale. It's a great radio and a classic, but it does not have PL tone capability. I have a tone generation board that I can use, but I don't have a schematic of the radio to figure out where to insert and power the tone. I have contacted ICOM, but as yet haven't had much luck. Can someone help me?

If you have ever added PL tone capabilities to an 251A, I would like to hear from you. If you have suggestions on what to look for, I would also like to hear from you. If you have, or know where, I can get a copy of the technical manual or schematic for the radio, please let me know.

I would appreciate all input. Please e-mail at my regular addresses of: jjweinb@earthlink.net or w0qo@arrl.net.

Thanks and 73's.

1727. PL tone for ICOM-251A

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-23 00:00:00 UTC
From: Jeff Weinberg <jjweinb@earthlink.net>
Message-ID: <m%cT5.654$_N3.515527@den-news1.rmi.net>
Source record: 99202

I recently purchased an ICOM-251A at an estate sale. It's a great radio and a classic, but it does not have PL tone capability. I have a tone generation board that I can use, but I don't have a schematic of the radio to figure out where to insert and power the tone. I have contacted ICOM, but as yet haven't had much luck. Can someone help me?

If you have ever added PL tone capabilities to an 251A, I would like to hear from you. If you have suggestions on what to look for, I would also like to hear from you. If you have, or know where, I can get a copy of the technical manual or schematic for the radio, please let me know.

I would appreciate all input. Please e-mail at my regular addresses of: jjweinb@earthlink.net or w0qo@arrl.net.

Thanks and 73's.

1728. Alinco DX-70 Question

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-23 00:00:00 UTC
From: RGS <rgs72@hotmail.com>
Message-ID: <3mdT5.76846$a7.1216100@news1.rdc1.il.home.com>
Source record: 99203

Just got the DX-70T and so far am very pleased. Is there any way to jumper the aux. plug so the TUNE button will allow manual antenna tuning? I have seen one for the ICOM 706 series, just wondered if it could be done with the DX-70.

Thanks,
Ron

1729. Re: ARRL Board to Consider Morse Code Policy Review

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-23 00:00:00 UTC
From: Fred Hambrecht <Fred@w4jle.com>
Message-ID: <8vjomagqf1@iac5.navix.net>
Source record: 99204

Requiring Morse code today is akin to requiring one to saddle a horse to achieve a drivers license. While a neat past time for hobbyists, no other service is using it. Yep! I had to learn 20 per for my extra, but so what! I did not have to learn the principals of the sparkgap transmitter or the magnetic detector. I have studied both because I had an interest, it is time for CW to have the same status.

Picked this up on another newsgroup. I am donating packing boxes, what can you do? I suggest they relocate to the country of Chad.
****
Subject: It costs so little and means so much...
Importance: Low

As you are probably aware, if voting results in Florida stand as they are now, George W. Bush will be our next President. This will have catastrophic results in our vital--no, indispensable--entertainment industry. Barbara Streisand, Martin Sheen, Susan Sarandon, Whoopie Goldberg, Alec Baldwin--among many others--have sworn to leave the country if George W. Bush is elected President. And this is where YOU can help. We need volunteers to help pack and to load moving vans. We also need airfare for these irreplaceable national treasures so they can
relocate before they change their minds. For the cost of a small SUV, you can sponsor one of these celebrities and their unfortunate relocation. You will know that your efforts are helping when you receive
postcards, letters and pictures from your chosen "refugee" as they learn
to become a useful citizen in the Third World country of their choosing.
You will help, won't you? It costs so little but it means so much. Call 1-800-deport-a-lib. Operators are standing by. Major credit cards are accepted.

1735. Help on Collins VFO?

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-23 00:00:00 UTC
From: Walter Treftz <boomer1@hitter.net>
Message-ID: <3A1D75E5.FE3435AB@hitter.net>
Source record: 99210

Maybe some of you military collectors can help me!!!

Have an obviously oscillator subassembly that would
like to consider using for the VFO on the new WARC
ham bands with an old Viking II-CDC that I have
(could use conventional old ham VFO for the older
bands but need something for the 10/18/24 mhz bands.

This unit appears to have "maybe" come out of an
AN/ART-13, Navy TDH (big 5kw jobbie) transmitter
(as that is the only places I have seen these knobs)

All I know is;
1) Has "Colling Part Number 344E" embossed in
top of the subassy.
2) Uses an 837 tube
3) Knob on front (with small revolution counter)
like on ART-13 or TDH
4) Size: 12" deep x 4" wide x 4.5" high.

Does this ring any bells??? Can anyone supply data
(schematic, freq output, etc) or anything at all
on it??

Any/all help/info/input will be greatly appreciated.

> --

It was obvious which way the Florida supreme court would go, after all 4 of their seven members contributed over $15,000 to the Gore campaign, and it's no small coincidence that the next president will appoint several justices to the Supreme court (US).

Just watch, after the counts still favor Bush, the next step will be to bring in Jesse Jackson, Al Sharpton, Alan Derschowitz (SP), etc. and stir up the natives so that a little rioting and burning will give the appearance of credibility to ALgores' actions. It's absolutely incredible what lengths these liberals will go to to retain their power, and even more incredible how many of the unwashed masses believe their claims...

Breaking: Illinois Court Did NOT Accept Dimpled Ballots
NewsMax.com
Thursday, Nov. 23, 2000
The Chicago Tribune reports in today's Thanksgiving edition that a critical Illinois court ruling cited by the Fla. Supreme Court may not have set the precedent Al Gore's lawyers claimed.

During arguments before the Fla. Supreme Court, Al Gore's attorneys claimed that an Illinois Supreme Court ruling "was a sweeping directive to count controversial 'dimpled' ballots, in which ballots were indented but not punched through," the paper reported.

But the Tribune reported that the "Illinois case should not give Democrats any confidence that dented ballots will be counted in Gore's favor. That's because the Illinois court actually affirmed a trial judge's order to exclude dented ballots, since he had decided he could not reasonably determine the voters' will by examining the ballots."

The Illinois case was referenced in Tuesday night's opinion offered by the Supreme Court, and has been trumpeted by the Gore team as a model for Fla. counties engaged in the manual recount.

Attorney Burton Odelson, who represented one of the candidates in the 1990 Illinois case, told the Tribune, "The judge did not count ballots that were indented because he could not determine the voters' intent.

"From the beginning, I knew everybody [in Florida] was interpreting this case wrong and reading into it what they wanted to read into it."

The Gore team had a lawyer in the Illinois case present an affavadit to the Fla. Supreme Court stating that the Illinois court had agreed dented ballots should be included.

The Tribune said the attorney's affadavit "apparently was mistaken in its assertion that such ballots were counted."

NewsMax.com has run ads in the NY Times, USA Today and in major papers exposing Al Gore's election theft. Read NewsMax.com's urgent letter to its readers. If you have already contributed, you can do so again. Keep these ads running! Find out how you can help expose
voter fraud and the stealing of the election. Click here now.

With cable, it depends where you are. I was on a visit to London in the UK, and got on line via my bro-in-law's TV. Monday OK, tue ok. In fact ok til Friday. But Sat & Sun, when everybody gets on line, you get ZIP. The spectrum in cable is limited, and WILL get filled up. Use it while you can. I did. Now I'm on Hi speed Sympatico. Not as fast, but no crowding.

Boo Hoo, We gore folks thought that with the help of Buggsy from Chi-town we had it stolen, and now the mean spirited Republicans have beat us to the punch. Now the blacks will be re-enslaved, food will be snatched from school children, old people will have their social security checks reduced to $2.73 a month, and other things too unmentionable to speak of... Bring your bumper stickers and signs to the public square tomorrow, we intend to riot and give the Republicans a tounge lashing! Please exercise caution as the Republicans didn't trade in their guns for Nike's like we did. It is rumored they don't even have trigger locks on their guns and are using environmentally unfriendly lead bullets.

Besides, they don't care if we riot in the major cities, as that was the source of all the Al Gore votes...

Gay David goes into the doctor's office and has some tests run.
The doctor comes back and says "David, I am not going to beat
around the bush. You have AIDS."
David is devastated. "Doc, what can I do?"
The doctor says "I want you to go home and eat 5
pounds of spicy sausage, a head of cabbage, 20 un-peeled carrots
drenched in hot sauce, 10 Jalapeno peppers, 40 walnuts and 40
peanuts, box of Grape nuts cereal, and top it off with a gallon of
prune juice."
David asks, "Will that cure me, Doc?"
The doctor replied, "No, but it should leave you with a better
understanding
of what your ass is for."

blah, blah, blah,

This, from a Canadian newspaper, is worth sharing in view of the insulting "Revocation of Independence" joke circulating here and elsewhere.

America: The Good Neighbor.

Widespread but only partial news coverage was given recently to a remarkable editorial broadcast from Toronto by Gordon Sinclair, a Canadian television commentator. What follows is the full text of his trenchant remarks as printed in the Congressional Record:

"This Canadian thinks it is time to speak up for the Americans as the most generous and possibly the least appreciated people on all the earth. "Germany, Japan and, to a lesser extent, Britain and Italy were lifted out of the debris of war by the Americans who poured in billions of dollars and forgave other billions in debts. None of these countries is today paying even the interest on its remaining debts to the United States.

"When France was in danger of collapsing in 1956, it was the Americans who propped it up, and their reward was to be insulted and swindled on the streets of Paris. I was there. I saw it.

"When earthquakes hit distant cities, it is the United States that hurries in to help. This spring, 59 American communities were flattened by tornadoes. Nobody helped.

"The Marshall Plan and the Truman Policy pumped billions of dollars into discouraged countries. Now newspapers in those countries are writing about the decadent,

warmongering Americans. "I'd like to see just one of those countries that is gloating over the erosion of the United States dollar build its own airplane. Does any other country in the world have a plane to equal the Boeing Jumbo Jet, the Lockheed Tri-Star, or the Douglas DC10? If so, why don't they fly them? Why do all International lines except Russia fly American Planes? Why does no other land on earth even consider putting a man or woman on the moon? You talk about Japanese technocracy, and you get radios. You talk about German technocracy, and you get automobiles.

"You talk about American technocracy, and you find men on the moon - not once, but several times [illegible] and safely home again. "You talk about scandals, and the Americans put theirs right in the store window for everybody to look at. Even their draft-dodgers are not pursued and hounded. They are here on our streets, and most of them, unless they are breaking Canadian laws, are getting American dollars from ma and pa at home to spend here.

"When the railways of France, Germany and India were breaking down through age, it was the Americans who rebuilt them. When the Pennsylvania Railroad and the New York Central went broke, nobody loaned them an old caboose. Both are still broke.

"I can name you 5000 times when the Americans raced to the help of other people in trouble. Can you name me even one time when someone else raced to the Americans in trouble? I don't think there was outside help even during the San Francisco earthquake.

"Our neighbors have faced it alone, and I'm one Canadian who is damned tired of hearing them get kicked around. They will come out of this thing with their flag high. And when they do, they are entitled to thumb their nose at the lands that are gloating over their present troubles. I hope Canada is not one of those."

FINALLY!! Someone who realizes the TRUE nature of the CC&R regarding
antennas. The FCC in so much has confirmed the same thing when they made
it illegal for Associations to restrict TV antennas because it made you
subscribe
or pay for a service that would otherwise be free.

Anyone who uses the line "if you signed into it then don't whine" is not
living in
reality. I agree that if you don't want CC&Rs then don't buy a house in an
area
where they have them. But here in San Diego EVERY new delvelopment built
today has CC&Rs restricting antennas and a good 80% built within the last 10
to 15 years has them as well. Why should I be forced to buy a house that's
over
30 years old just so I can enjoy my hobby? I don't know what we amateurs,
as a
community, need to do to get the FCC to pull their head out of that dark
recess
that they apparently have it shoved in and re-examine this issue seriously.

Oh, come on, Dick. Your bias in this is really starting to show. Why are you being so hard on one speech by Bush, but ignoring all the speeches by Gore?

For example, Bush sat there for an entire week and didn't respond to Gore's suggestion in press conference after press conference that Bush's opposition to the recounts was because Bush didn't want a "fair and accurate" count of the votes, or that Bush didn't care about the "will of the people."

Where was your outrage to that obvious attempt to demonize Bush? I didn't see you complaining about that in these newsgroups.

> In the meantime, I will dust off my Jesse
> Ventura sign -- he is a guaranteed landslide

writes:

>Requiring Morse code today is akin to requiring one to saddle a horse to
>achieve a drivers license.

Not a valid analogy at all, Fred.

Horses aren't motor vehicles. Neither are they in common use on the nation's
roads, except in some large cities and in Amish areas.

How about this:

"It's like requiring all drivers to pass their driving test using manual
transmission cars, even though practically all cars made today are available
with automatic transmissions."

> While a neat past time for hobbyists, no other
>service is using it.

Not true. Other services still use Morse, but only in minor roles. But that's
irrelevant, anyway.

Even if all other services completely abandon Morse, it's still in wide use on
the amateur bands. Particularly the HF/MF amateur bands. Coupla' weekends ago I
worked over 400 other CW stations without half trying - and that wasn't
anyhting like a record, even for my modest station.

An amateur license conveys the privileges of operation in the amateur bands.
Logically, the tests for such a license should include the things that hams use
on those bands - not what other services do. There are no questions on radar or
FM stereo multiplex in the ham tests because hams don't use those things. But
hams do use Morse - extensively.

>Yep! I had to learn 20 per for my extra, but so what!

So did I. That was 30 years ago. Big deal. ;-)

> I
>did not have to learn the principals of the sparkgap transmitter or the
>magnetic detector.

Another invalid analogy.

Both the magnetic detector and spark transmission of all types were gone a
dozen years before you were even born, Fred. Spark was outlawed for hams in
1927. It had all but disappeared from the amateur service by 1925. The magnetic
detector was abandoned even earlier - 1920 or so. They were dropped from the
ham tests because hams didn't use them anymore. The same cannot be said for

Morse - hams all over the world use it every day. Some use nothing else.

>I have studied both because I had an interest, it is time
>for CW to have the same status.

I learned both, too - but Morse can be used on the hambands, now, today. The same can't be said of spark.

But the point of this thread is to let your views and opinions, whatever they may are, be known by the ARRL BOD. Doing so will have more import than any posting to a newsgroup.

>FINALLY!! Someone who realizes the TRUE nature of the CC&R regarding
>antennas.

This info has been posted by a number of independent sources. Obviously neither the developers nor cable TV companies nor the FCC wants folks to know about it.

It is interesting to note the existence of antenna restrictions in areas where the electric, telephone and cable utilities are not required to be underground. Note that in many cases a simple wire antenna in the back yard is "unacceptable", but utility poles with a maze of wires and multiple drops to each house are perfectly fine. That pretty much demolishes the "aesthetics" argument in those cases.

>The FCC in so much has confirmed the same thing when they made
>it illegal for Associations to restrict TV antennas because it made you
>subscribe
>or pay for a service that would otherwise be free.

Yup. Plus there werel other issues, such as restriction of free trade (why do the cable companies get exclusion from the competition of the satellite TV folks?) and free speech (what if the cable doesn't carry every station that's receivable off-air or via satellite?).

The really damaging nature of deed restrictions and covenants is that many of them are specifically designed to be all but impossible to change. Who knows what technological and social changes will come in the future? For example, imagine a development with a "no antennas" clause that is so far from the TV stations that reception is impossible with indoor antennas. So everybody there

who wants TV becomes a cable subscriber. Then the cable company goes bust. Those folks will be effectively denied TV unless they violate the restrictions.

And because of their permanence, the percentage of available housing that is restriction-free keeps dropping as time passes. The choice of houses

> Why should I be forced to buy a house that's
>over
>30 years old just so I can enjoy my hobby?

You shouldn't have to.

It's one thing when an antenna represents a safety concern (that's why we have building codes) or a serious visual/aesthetic impact (like a 90 foot tower with multiple HF beams on a tiny townhouse lot). It's a completely different thing when we're talking about wire antennas that are less obvious than a cable TV drop...

> I don't know what we amateurs,
>as a
>community, need to do to get the FCC to pull their head out of that dark
>recess
>that they apparently have it shoved in and re-examine this issue seriously.

One thing is to gather information. The ARRL has set up an information-gathering project to demonstrate the overly restrictive, arbitrary and discriminatory nature of many CC&Rs. They need hard info, however, however, not anecdotes and apocryphal stories.

For example, the FCC seems to be under the impression that all ham antennas are large and ugly, while all TV antennas are small and unobtrusive. Pictures of large TV antenna setups that got federal exemptions are one form of evidence to the contrary. The utility-pole scenarios described above are another.

see

http://www.arrl.org

for more info on this project.

Those areas are already "war zones." In fact, with the amount of violence in some intercity neighborhoods, I doubt that most people in those areas will even notice that a riot is going on.

I can pick up a few boxes from behind the local grocery store, and I might be willing to pop for a few rolls of tape. And, of course, I'm more than willing to give them a good kick in the butt as they board whatever means of transportation they're leaving on.

Jesse Jackson and his thugs did the same thing days before. For them,
it was not newsworthy. It was just their normal behavior. The thing
that makes the above newsworthy is that Republicans started acting
like Democrats, heaven forbid.

Okay, I'll bite. I only count two branches of government also - the legislative branch (Congress - made up of the House and Senate) and the executive branch (the President). Where is the third branch of government?

Have you noticed that the high-crime areas of the country voted for
Gore who wants to take away their Constitutional rights to own a
weapon for their own law-abiding self defense? Go figure. (Or maybe
only the criminals voted. :-)

One has to wonder just why amateurs can't attract lots of users to HF. One of the major problems is the inability to put up even a mediocre antenna for many hams. CC&Rs have a major effect in this. When you add in the cost of HF gear, the incentive to upgrade is even less. However, I was noting that there were claims that the HF bands would decline and die under the weight of all of the folks who could now get on with 5 wpm. They didn't happen, and HF doesn't sound like CB normally either.

Finally, a ham, even a technician class ham, who builds antennas and/or gear for VHF, UHF, or SHF is just as much a ham as one who gets on HF, and tries to find traffic to pick up on one of the traffic nets. I also note that a ham interested in VHF or UHF is more likely to be recruitable for HF than a newcomer. Hams instead have to learn to keep the hams they find, and encourage said hams to continue being hams instead of attacking them.

Looks like there be yet another ham radio comedy show goin on.
This time it's on 75 Meters. Check out 3.860 anytime after 11:00 PM Eastern.
Their a splinter faction from the rusty pickup-truck driving
patriots bunch on 3.950. They even have
a Bulletin Board that's *filled* with juicy tidbits and raccoon
rantings.

This BBS is at http://www.nationlink.com/liberty/wwwboard.html

It's not quite up to the spontaneous fur-flying and feces-flinging
proceedings we all fondly remember from the "original" 14.313
of a couple Years ago, but it's still a welcome break from all the
dry, boring, traffic and weather nets on ham radio of late.
If your looking for an eclectic mix of right-wing politics and "old
tyme revival-tent" type religious fervor, with good dose of boozing
belching, farting and (yes..) even pot-smoking tossed in for good
measure...then by all means point your radio dial to 3.860

Think of it as ham radio's answer to Comedy Central's: "Man Show".

Note there are several other *normal* groups which occupy this and
other adjacent frequencies earlier in the evening who *should not* be
cornfused with the 11:00 late-nite show

Yup - that's happened before, too.

The number of Novices has actually increased very slightly in some months since
the restructuring, too - the result of folks renewing in the grace period.
>
> Keeping the numbers up is the codeless
>Tech which have never expired yet but which have an average life to
>expiration below the 60 months that would indicate growth.

It will be really interesting to see what happens to the numbers after February
2001, when the oldest of those licenses begin to expire. The numbers game is
further complicated by the change to 10 year licenses in 1984 and the change to
ULS a year or so ago.
>
>If you are implying that Restructuring was a wet firecracker, you are 100
>percent correct. Pumping bullets into a dead horse doesn't make it any

I don't think the number of licenses is a good indication of the health of the
ARS. What really matters is what the folks who hold those licenses do with
them. Whcih is better - a million US ham licenses but only 100,000 active US
hams, or a half million licenses and 250,000 active US hams?

Negative....at this time. The issue before the ARRL Board is whether or not to continue to support S25.5 internationally in the ITU rules, or whether to vote in the upcoming IARU Region 2 conference to allow each nation's own regulatory agency to decide for itself whether or not they need to continue testing Morse cw as part of operator qualifications. There will be NO domestic changes to this until after the WRC2003 conference results are in.

Support home rule! Encourage the Board to support deletion of S25.5 at IARU Region 2, and WRC2003.

Oh, I've heard it said that way many times before also, but I've never really considered the judiciary as government, again because it doesn't govern. The judiciary might interpret the laws, occasionally to the point of almost redefining the law, but it doesn't make laws (though some of its recent decisions certainly verge on that).

But, if we go with a loose definition of government, or use the common definition of government, then I guess the judiciary could be a branch.

Of course, this is not to say that was the way Bush was thinking when he made that statement. For all I know, perhaps he doesn't consider the presidency to be government unless a Republican is in office. Who knows, in other words.

Just one thing I wanted to point out. I took the option of avoidance. While I can see that some might object to a 30 year old house, I offer the likelihood that that 30 year old house would be better built than the "modern" ones. For example, in 1986 I purchased a home built in 1956. It is particularly well constructed--I even got REAL plaster walls instead of drywall. The timbers are heavier than many I have seen in new construction. I LOVE this house. Crime in this neighborhood is almost non-existent. There are woods at the rear and at the end of the dead-end street giving a rural atmosphere with city convenience. The house is spacious with a basement (great place for my shack), garage AND a double carport. No CC&Rs. Between having a 30 year old house (almost 40 now) and having some blue-haired old lady telling me I can't have those "horrid" antennas or what kind of door I can put on, I think I got the better deal. Just MHO.

>It was an idea that the FCC could NOT implement and comply with treaty
>obligations which presently require Morse Code ability for access to
>frequencies below 30 MHz.

Yup. In fact the exact wording specifies that the ability must be demonstrated before the license is granted.

The ARRL BOD idea was based on the fallacy that a person using Morse on the air demonstrates that ability by doing so. Yet the person using Morse could be using machine encoding/decoding, or be able to send but not receive.

>As for it being a dumb idea,

Sorry if I wasn't clear about why it's a dumb idea. There are at least three reasons:

1) Anyone who wants to use Morse on the air is not going to be stopped or even slowed down by a 5 wpm code test.

2) The idea can't be implemented under the treaty, as noted above.

3) (This is the biggie) Suggesting things to the FCC that cannot be implemented simply tells them that the suggester doesn't understand the issues, or hasn't thought the whole thing out very thoroughly. Such suggestions don't increase the suggester's credibility with the FCC.

>well, let's note that
>amateur radio doesn't seem to have decayed as all of the naysayers originally
>claimed if 20 wpm and 13 wpm went away.

How do you defined "decayed"? In terms of numbers, the restructuring has not had any real impact on the number of hams (see N0BK's post on this subject). There have been a lot of upgrades, sure - but most of them are hams who have already passed 5 wpm. It has NOT resulted in any significant increase in

numbers, as was predicted by many.

And it should be noted that the WRITTEN tests were also reduced. Here's a comparison (written test requirements only):

The Technician used to require passing two written elements totalling 65 questions. Now the same license requires passing one written element totalling 35 questions. 50% reduction in tests, 46% reduction in questions.

The General used to require passing three written elements totalling 100 questions. Now the same license requires passing two written elements totalling 70 questions. 33% reduction in tests, 30% reduction in questions.

The Extra used to require passing five written elements totalling 190 questions. Now the same license requires passing three written elements totalling 120 questions. 40% reduction in tests, 37% reduction in questions.

Remember also that for the past 10 years the 13 and 20 wpm code tests could be waived by simply getting a doctor's letter. I don't know how many upgrades were gotten this way, but the VE's I've talked to reported between 10 and 20% of upgrades had medical waivers. So the "5 wpm Extra" is not a new thing at all.

Speculation as to the long term effects of the restructuring are premature at best. It's only been in effect about six months. But the trend is no different than it was before April 2000

See

http://www.ah0a.org

for numbers dating back to 1997.

However, the point of this thread is simple: Let the ARRL Directors know your opinions and views - whatever they may be.

Hello Gary,
I took the W5YI Amateur renewal route and let them file
for the change.
They had a way of simplifying the application and it took
only minutes.
ARRL sent me a package and it was real confusing.
I read it twice and then threw it in the garbage after I re-
ceived the W5YI renewal package.
Not too sure what to tell you on your second class.
W5YI might be able to advise you on this.

1782. Clinton suffers Flashback during Nam visit....

During the next few weeks, BSNN.net will be reliving some of our favorite moments of campaign 2000. We begin with those wacky primaries. From Bradley Dangles From Airplane to Prove his Heart Won't Quit, to McCain Calls Bush a "Gook" During Phone Call, click here and remember the way it was.

President Clinton has Flashback in Viet Nam

HANOI, Vietnam - It takes more than a fully-blown American president visiting to faze this place, but Bill Clinton's dramatic flashback during welcoming ceremonies created a wild commotion. Clinton arrived in Hanoi to a low-key official welcome on Thursday.

As he greeted President Tran Duc Luong Clinton said, "Well, this is one place in the world I never expected to see. You know, Hanoi and I have a lot in common. We both were getting bombed a lot in the late sixties and early seventies," Clinton continued, referring to his days at Oxford University.

It was apparently those Oxford memories, and the sight of the Viet Nam flag, which caused Mr. Clinton to suffer a severe flashback experience. While making his remarks, Clinton grimaced and seemed to lose consciousness. "Hey," he shouted. "Don't bogart that thing, man. Man, I'm jonesin'."

Everyone present looked on in stunned silence. Then the President began chanting, "Hell No, I won't go." The Secret Service quickly moved in to remove the President from the situation so they could snap him back to reality.

I realise it is hopeless to argue, but,

The Mashall plan never included the allies. England lived
witht the debt to the US for manyyears while the Axis rebuilt.

Makes a lot of sense, doesn't it? I just don't understand these people.

I just move here temporily from Seattle, where I had to walk each day with several co-workers through a heavy crime infested area to catch the ferry across Puget Sound. While I was there, two people were robbed and beaten by gangs on the very street we walked on.

The woman, who worked where I did, was in the hospital for seven weeks with her jaw wired shut, broken ribs, a broken hip, two stab wounds, and several cracks in her skull (we'll ignore the ugly bruises and abrasions). I only heard rumors about what happened to the guy (didn't know him - he worked in the next building).

Yet, in spite of this, three of the four co-workers I traveled on the ferry with each day were opposed to private gun ownership. And I never did understand the logic behind their opposition.

In my opinion, it takes a truly insane person to face the immediate risk of personal injury each day and then turn around to want to deprive others of anything they could use to protect themselves in a similar situation.

But, actually, I think you may be right. Many of Gore's supporters are possibly criminals who want to see Americans disarmed. It certainly would make things much easier for criminals if they didn't have to worry about being shot while they attacked their victims.

I don't know if you saw the Wet Firecracker Report or not. I mention that
Techs are excluded simply because they had nothing to do with restructuring.
Your final point is a good one and one I have seen teenage football players
screw up in the weight room; they play mind games with the second-level
players and find as seniors there is no bench when they are bone-tired in
the fourth quarter.

I am aware that you were observing the lack of new, uncultured knuckle-draggers on HF. I merely pointed out that there isn't just a lot of change of any kind on HF.

Dick

Has anyone tried wiring up a small headset for the FT-100? I see that Heil has some, but i'm looking for something I can use in the car. Something like the MFJ-293 would be ideal. I have a computer headset here, but i understand the pin out for the FT-100 is a bit odd. Any suggestions?

Were that the choice we could debate it. But the activity to licensing ratio is a demographic thing. A man's (and like it or not is a male hobby) responsibilities, free time, and free money change over his life. A certain number of inactive licenses is inevitable and healthy; it was a hobby for 15 and over 50 when I got in 46 years ago. The current state of our economy is as much a function of having -- temporarily -- a relatively low number of dependents versus working age population; the 10k Dow was projected as early as 1991 that I know of. Our immigration 'policy' is essentially to add a trip thru the desert so we get the workers and not their kids or grandmas. Demographics is real.

It would seem, however, that the large number of 'boomers' going thru the demographic snake would be replacing the WW2 types dying off. I see zero evidence of it but then I tend to hang with over 50s at least with radio. My point here is that a priori one would expect a higher license-to-activity ratio than we appear to be seeing.

You are entitled to be a bull to my bear but don't hold your breath.

At about 1800 hrs UT, Dick Cheny came on TV to urge a lowering of the rhetoric associated with the Florida debacle. He then went on to blame Republicans entirely for the problems, suggested no steps his own side could take, and even blamed the GOP for Dade County's decision not to do a recount.

This is reconciliatory?

Not by any means. It merely means that the turncoat Cheny has completed his trip to the dark side of the force.

>actually govern anything, Jim?
>
Certainly - for several reasons:

1) That's how our government is defined - three branches. That's grade-school civics around here.

2) The judiciary is a part of government. Therefore it must belong to some branch or other, by definition. If it's not a branch of its own, what is it a part of?

3) The courts and judges do, in fact, govern. They have two major roles:

A - Trials, which determine whether a law has been broken, if so which law and who is responsible, and what the penalty is. (civil and criminal cases)

B - determine if laws enacted by the legislature are in accord with the state and federal Constitutions. If not, those laws are overturned. (That's how abortion was legalized in 1973)

Sure seems like a branch of government to me. Of course court decisions are enforced by the executive branch, but the decision-making process is in the hands of the judiciary.

--

Of course it's obvious that Mr. Bush simply had a slip of the tongue - he clearly meant to say "three" but "two" came out. He does this sort of thing all of the time - nothing new or surprising. Anybody who has followed his campaign speeches has heard lots of similar stuff.

Source record: 98986

It's about time the USA got its priorities in order. Tying things up for a while over correctly counted / cast VOTES is a trivial issue, if the wrong man is given the highest office in the land, so what ? However, for sex-starved (and jealous) Republicans, if someone (read Clinton) has an extramarital BJ in the Oval Office, now THAT, THAT'S an ISSUE worth grid locking all of Washington for (just ask Ken Starr !) In a similar vein, if Newt Gingrinch has to ride home in the back of the Air Force One (couldn't set up front with the Prez) There is yet ANOTHER issue worth shutting down the government for !! Glad to see someone has their priorities right !

1804. the lizaerd people will be shown 4 what they are

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-25 00:00:00 UTC
From: graham dyer <grahmd@sympatico.ca>
Message-ID: <JcQT5.15902$xK.526109@news20.bellglobal.com>
Source record: 98987

the lizard people will be shown for what they , thieves in the light of day . The attempt to overturn a duly run election is just another example of what these democrats will lower themselves to in an effort to keep the power in the hands of the corrupt .

the rule of law the constitution and the american peoplw mean nothing to these people , nothing more than an obstacle that is in there way to control the body and minds of the american people with media spin and the spinning down effect of the education system to generate a group of uneducated ill informed citizens to be treated like mushrooms "kept in the dark and fed shit" The height of which is the denial of the military to vote on base on election day.....a executive order by clinton earlier this year and the power of the military in the event of disaster or emergency turned over to janet reno
rather than the joint chief of staff in the military and the rejection of over 70% of the out of country votes by the armed service personel ...this is a shame

For a Canadian, you are awfully opinionated (to say the very least) about US politics. Seems much more productive to listen to the good Mr Day, not to mention Joe Clark, attempt to debate in French. Or build a master chart of who is in what provincial vs Federal party at the same time.

By the by, I lost track: Can a Mountie wear a turban??

1807. Ham Trip to Moscow and St. Pete

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-25 00:00:00 UTC
From: Guy Shields <w4gbu@mindspring.com>
Message-ID: <3A1FE0F7.BE310F71@mindspring.com>
Source record: 98990

For the Ham experience of a lifetime..

The Friendship Force International is sponsoring a trip
to Russia for U.S. Radio Amateurs. The trip will leave from
Atlanta and be in May 2001. Many going will take their
spouses. So far we have about 20 going on the trip. We
have a goal of 30. If you're interested go to the web page
for details and schedule..
http://www.mindspring.com/~w4gbu/russia.htm

The cut-off date is January 15 since we have to get
Russian ham licenses, visas and reservations.
Everyone going will be staying with a Russian ham
family in Moscow and a hotel in St. Petersburg.

Guy Shields, W4GBU

1808. True "slashed-zero" font available - FREE

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-25 00:00:00 UTC
From: Charles Johnston <ctj92@earthlink.net>
Message-ID: <qtRT5.2270$nh5.218077@newsread1.prod.itd.earthlink.net>
Source record: 98991
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

About once a month I post the availability of this font that I had
modified by a commercial font designer. It is a true slashed-zero Andale
Mono fixed-width font extremely suitable for DXBase 2000 / 2001 and really
any logging software. It's advantages are two-fold

1. It allows for easy discernment between O's and 0's with the slashed zero

2. Because it is a fixed width font it provides perfectly aligned columns in
the DX cluster windows.

Available as a 47K zip file download with installation instructions.
Last month there were over 230 downloads of this font.
It is on the Software Download Page of my site directly beneath the text
that describes DXBase 2001. Enjoy.....it's FREE.

SB DX @ WW < KB8NW $OPDX.487
Ohio/Penn DX Bulletin No. 487

The Ohio/Penn DX PacketCluster
DX Bulletin No. 487
BID: $OPDX.487
November 24, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AI2Q, KF2TI, WB2YQH/WB2RAJ & The 59(9) DX Report, W3UR & The Daily DX, KN4UG, N6RT, WC7N, K8YSE, NE8Z/HC1MD, W9RB, CO8TW, DJ5AV & DX News Letter, JF6OJX, LA4KQ, LA9GY, LU7EE, SM3TLG, UZ8RR and VK2GJH for the following DX information. Also a special thanks to Bill, NG3K, for the "CQWW Announced Operations" chart.

EARLY EDITION!!
FOR LAST MINUTE ANNOUNCEMENTS FOR THE CQ WORLD-WIDE DX CW CONTEST!!
THERE WERE PLENTY OF STATIONS WARMING UP FOR THE CONTEST THIS PAST WEEK!!!!!

5A, LIBYA. 5A1A was heard a few times this past week on 12 meters. Check around on 24915 or 24950 kHz. The station was also heard on 10 meters CW and 15 meters SSB (DX net 21355). All operations took place between 1500 and 1800z.

5C, MOROCCO. The Bavarian Contest Club has been on the air as 5C8M preparing to enter the CQWW CW Contest as CN8WW. Activity will last until November 27th. QSL via bureau to DL6FBL or direct to DL6FBL: Bernd Och, Chr.-Wirth-Str. 18, D-36043 Fulda, Germany.

8P9, BARBADOS. Look for John, K4BAI, to sign 8P9Z in the CQWW CW Contest and 8P9HT after the contest. He will be there until November 29th.

A3, TONGA. "The 59(9) DX Report" states that Paul, A35RK, will be active in the CQWW CW Contest as a Single Op/All Bands/Low Power entry. QSL via W7TSQ.

A6, U.A.E. Station A61AJ was quite active during the past week on the lower frequencies probably warming up for their Multi/Multi effort in the contest this weekend. QSL via W3UR.

AP, PAKISTAN. Bob, AP2JZB, was heard active on 12 and 10 meters. Some reports state he was begging for a QSO. Check 24955 and around 28527 kHz between 1330 and 1430z.

C2, NAURU. Jack Haden, VK2GJH, has announced that the final details concerning his December 10-22nd C21JH operation has been put in place. Emphasis will be placed on 50 MHz with limited activity on 80-10 meters and 29 MHz FM as time permits. If you want to learn more about this operation and Nauru in general, go to the following Web page, click on the "C21JH" box in the left hand column, at: http://web.one.net.au/~vk4cp QSLing is via VK2GJH direct only.

CO8, CUBA. Juan, CO8TW, reports that he will be in the CQWW DX CW Contest as a Single Operator/Low Power/Single Band (15 or 10 meters) entry. QSL via: Juan Carlos Veranes, CO8TW, Po Box 8, Santiago de Cuba, CP 90100, CUBA. He will have his contest log available online at: http://www.qsl.net/co8tw/

EA8, CANARY ISLAND. Look for Heijo, DJ1OJ, to be active as EA8/DJ1OJ. Heijo arrived there last week and will be active until he leaves Tenerife in March 2001. He said to QSL via his home callsign via the bureau.

EP, IRAN. Club station EP4PTT was heard active this past week on 28331 and 28341 kHz around 1400 to 1430z. According to "QRZ DX", the station is in Shiraz and operated by Hamid/EP3HR and Yar/EP3SP. QSL via: c/o Directorate of Telecommunications, Box 11365-931, Tehran, Iran. Also, Ali, EP2MKO, continues to be very active on 30/12/10 meters between 1300 and 1500z, but has been heard on 30 meters as late as 2330z. QSL via UA6HCW.

FO0/A/M, AUSTRALS AND MARQUSAS ISLAND OPERATION WRAP-UP. FO0WEG and FO0POM operated by SP9FIH and SQ9LR have returned home. During their 11 day operation from Tubuai (Australs OC-152) they made over 15000 QSOs. Their 4 days operation from Nuku Hiva (Marquesas OC-027) added 5300 QSOs to make their total 20300 QSOs for the whole DXpedition. Operations were on 80-6m only barefoot, using a 3 element tribander Cushcraft A3S, Butternut HF9V vertical and 5 element beam for 6m. QSL cards will be sent at the end of December. QSL route is via SP9FIH: Box 480, 44-100 Gliwice, Poland (other address with street name given by some DX services is OK, but not preferable).

HC, ECUADOR. Dr. Rick, NE8Z, will be operating from Tumbaco, Ecuador as HC1MD from November 25th through December 11th. Activity will be on 80-10 meters CW/SSB using a Kenwood TS680s/Collins 30L-1 amp (600 watts)/Carolina Windom antenna. He will also be on 6 meters CW/SSB (150 watts + 3 element yagi). Rick will travel to different areas in HC-land and will sign HC1MD/HC(?). He will be portable, operating from remote locations, including "INSIDE" the cones of different volcanos at very high altitudes. These operations will be mainly on 20 meters CW with 100w + 20m Inverted Vee. He states, "Working SSB pileups are very difficult to do at high altitudes and the lack of oxygen." He will also be looking for the following new DXCC entities for his HC1MD DXCC: East Timor (4W6MM, 4W6GH, 4W6UN), Austral Islands & Laos (any assistance/ideas will be appreciated -- Send E-mail at " ne8z@yahoo.com " while he is in HC-land.) QSL via K8LJG: John Kroll, 3528 Craig Drive, Flint, MI 48506 USA. Also, please view the HC-DX AWARDS at: http://www.octavia.com/qsl/awards.htm

HS, THAILAND. Fred, K3ZO, was heard this past week operating from HS0ZAR on 40 and 20 meters SSB. Look for him to join the crew at HS0AC during the CQWW CW Contest as a Multi/Multi entry this weekend. Ray, HS0/G3NOM, states to look for HS station during the contest between 1834-1836 kHz and 3534-3536 kHz.

IOTA NEWS.....
OC-201. Hans, SM3TLG, will be active as ZL/SM3TLG from Waiheke Island, December 3-9th. Activity will be on CW/SSB. QSL to homecall direct or via the bureau.

JD1, MINAMI TORISHIMA. Katsumi, JD1BCK, has been active on 15 meters SSB. Check 21325 kHz after 2300z. He is expected to be here until August 2001. QSL direct only via JM1TUK.

JW, SVALBARD. Borge Holte, LA4KQ, informs OPDX that he will be active as JW5E, Zone 40, during the CQWW contest. Activity will be on all bands.

JW, SVALBARD. Morten, LA9GY, informs OPDX that he will be active as JW9GY (Longyearbyen) from December 1-4th. He hopes to take part in the ARRL 160-meter Contest with the call JW8G. For more information check the Web page at: http://home.online.no/~antonsen

LU, ARGENTINA. Arnoldo Jorge Corda (Tito), LU7EE, will be active in the CQ Contest as LU7EE/QRP as a Single Band entry on 15 meters. QSL via his QSL Manager EA5RD.

NEW OFFICERS. At the November 2000 meeting of the North Jersey DX Association, the following members were elected to the 2000-2001 Executive Committee: Ron Levy/K2CO President, Stefan Kurylko/N2TN Vice-President, Steven Adell/KF2TI Secretary and Gene Ingrahan/N2BIM Treasurer. Visit the North Jersey DX Association's Web page at: http://www.njdxa.org

NOT THE QSL MANAGER. Your editor (KB8NW) still continues to receive inquires about being QSL Manager for 5R8O because some databases list me as manager. I repeat, I AM NOT THE QSL MANAGER. Please pass the word and correct your QSL databases. The correct QSL Manager for 5R8O is 5R8FL.

P4, ARUBA. Rob, W9RB, told OPDX that he will be doing a little DXpeditioning soon as P40RB operating from the QTH of AI6V/P49V in Aruba, November 26th through December 3rd. Activity will be including the ARRL 160M Contest. His operations will be mainly CW, and probably mainly evenings except during the contest. QSL to W9RB CBA.

QSL INFO AND NEWS.....
Doug, N6RT, reports that the logs for the recent ZM8CW operation by Jacky, ZL3CW/F2CW, are now available at: http://dx.qsl.net/logs

Several have asked what the address for 7M4PTE, QSL Manager for S21YH is. If you have it, send it to the OPDX so we can publish it.

S07U/S07CRS AND 5T5U PIXS. Tad, JF6OJX, reports that he has uploaded pictures of S07U/S07CRS and 5T5U operations to his homepage. If you are interested in their operations, check the Web page at: http://www.qsl.net/ndxa/pedi/pedi.html

Be looking for a log search page coming soon.

SPECIAL EVENT. In connection with the closing of the Chernobyl Atomic Power Plant, a group of Ukraine operators UX1RY, UX2RV, UY2RA, UY2RO, UR0RR, US5RR, UT0RW and UZ8RR will be active from December 14-16th, using the special callsign EN23RW. QSL via direct to UX2RY: Andre Arsiyanz, P.O. Box 14, Slavutich-3, 07100 Kiev oblast UKRAINE.

VP5, TURKS AND CAICOS ISLANDS. Donald, KN4UG, will operate as VP5AZ from January 19-30th (2001), from Providenciales Island. He plans to be in the 160 Meter CW Contest and the NA QSO party. All QSLs go to KN4UG: Donald Namm, 103 Birkhaven Drive, Cary, NC 27511.

XT, BURKINA FASO. Harold, XT2AW, was very active on CW on the WARC bands (as well as 10 meters) this past week. He was heard on 7007, 10106, 14035, 18070, 24902 and 28028 kHz. Most of his activity was between 0030 and 0630z. QSL via DF2WO.

YI, IRAQ. A couple of stations were active this past week on 12 and 10 meters. YI9KU was heard on CW on 28026 kHz at 1530z. QSL via DL9KU. Peter, YI9OM, was active on 24894 kHz between 1330 and 1430z. QSL via OM6TX.

YJ, VANUATU (Update, refer to OPDX.483). "The Prairie DX Group" is now active as YJ0PD on all bands CW/SSB (especially the WARC bands). Look for them to be active in the CQWW CW Contest. They are expected to use the callsigns YJ0V. A press release by Rod, WC7N, reports their following planned schedule for YJ0PD:
0000z 20 meters RTTY
0300-0600z 50.110 MHz
0645-0715z 3789 kHz
0700z 40 Meters - either SSB or CW depending on activity
1000z 1830-1833 kHz
1330-1500z 3519 kHz
Their schedule depends on how long they stay on each one of the above bands. QSL route for YJ0PD and YJ0V is via N9PD. DO NOT send QSLs via the YJ bureau! For more information, check the Web page at: http://www.n9pd.com

ZA, ALBANIA. ZA1M was active on 17 and 12 meters this past week. Check around 18072, 24897 and 24908 kHz between 1230 and 1730z. QSL via IK2HTW. Also heard was Ben, ZA1K, on 28040 kHz at 1600z. QSL to: Box 7464, Tirana, Albania.

ZD8, ASCENSION ISLAND. Jim, N6TJ, is once again active as ZD8Z now through December 9th. Look for him to be a 10 meter Single Band entry in the CQWW DX CW Contest. QSL via VE3HO.

ZK2, NIUE (Update, refer to OPDX.479). Bill, W7TVF, is now active here as ZK2VF until December 10th. He has been very active on 40 and 30 meters between 0400 and 0630z, but is expected to be on 160-6 meters. He will listen especially for Europe, Africa or South America. QSL via W7TVF: Bill Dawson, P.O. Box 4049, Pahrump, NV 89061, USA.

The following list of announced operations for the CQWW CW 2000 Contest
as of 1411z, November 24th, 2000, was derived from the NG3K "CQWW CW
Announced Operations" Web page. For updates and fuller details (including
many QSL addresses, operational specifics, E-mail & Web page links)
refer to: http://www.ng3k.com/Misc/cqc2000.html

True. Large population growth in cities checked by social actions.
Also at work is the added social fantasy that violence will decrease
with the elimination of guns (like massive violence didn't exist before guns).

Doesn't almost every font have a slashed zero (ï¿½) as one of the characters? I just checked a few of my fonts and all of the ones I checked did.

Yep, but an Apple computer, for instance, won't display that zero
correctly if it was typed on an IBM/Microsoft machine.

1816. Re: 10 - 10 Question

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-25 00:00:00 UTC
From: Lou <tech@dp.net>
Message-ID: <8vp4qt$q0$1@news.dp.net>
Source record: 98999

The 10-10 number he was referring to, is/was a number issued by a "club" that talks on 10 meters, not the 10 code for any public service. To the best of my knowledge, this "club", named (I believe) "10 -10 International" collects numbers for whatever awards much like most of us collect QSL cards and such for awards.

I'm not sure how to contact anyone to get a number, but I've seen the info listed in past in magazines. Hopefully someone else can guide the original poster of the place to go to accomplish his desires. However, shy of waiting for a reply here, maybe the next time you hear such a station, ask them!

As for the "10 code", it is so varied and in lots of cases, at least locally, not used much. Most of our services use plain English for a good 90% + of communications. To prove a point as to the variables of 10 codes, 10-10 referred to here in the initial reply as meaning going off duty, around here (my area), means enroute! Go figure! The most you hear of 10 codes here is "mostly" for operators and license checks. Out of all numbers, maybe a total of 6 used.

Happy Holidays to all!

American folkore will have you believe that the Pilgrims and Indians sat down together back in the 1600's and shared a dinner of Turkey, corn, etc., etc., in love and harmony, and as such, it has become a holiday for us here in the US to give "Thanks" for the food and good fortune we have experienced all year long.

Reality :

It is the official beginning of the annual Xmas retail scourge which has totally engulfed the US, and I am sure the UK as well. We now see Xmas decorations, etc., here in late OCTOBER!!!!

None of this has ANYTHING at all to do with giving "thanks" or for what Xmas is all about either.

It is simply a month long excuse for people to spend money and go into serious debt for the sake of a holiday which no one really gives a rat's ass about.

Hope that helps...

Dan

Ya, but...

Just because _you_ can type a slashed zero with your font, and just
because _you_ can see it's rendering on _your_ screen, means *nothing*
for the hundreds of thousands of usenet users out here.

I suppose your font is proprietary to the operating system from
from the convicted monopolist from Redmond, Washington -- nicht wahr?

Saturday, November 25 2:05 PM SGT

Strong solar storms could wreak havoc in Northern Latitudes
WASHINGTON, Nov 25 (AFP) -

Across the United States this weekend, fire alarms and anti-theft devices may be triggered for no reason, pictures on television screens may flicker and fade to black, and entire communities could be plunged into sudden darkness.
Such unusual goings-on things could result from what scientists describe as a wave of major geomagnetic storms expected to strike beginning late Saturday and last for several days.

In an alert issued Friday, the US government's Space Environment Center said "a major solar flare from a large, active sunspot group" was observed on the Sun from Boulder, Colorado, last Thursday, at 8:13 am local time (1513 GMT), likely producing "additional major events."

The solar radiation storms and strong geomagnetic storms categorized by the center as a "G3 Event", officials said.
Under such storms "power system voltage corrections may be required, false alarms triggered on some protection devices, surface charging may occur on satellite components, drag may increase on low-Earth-orbit satellites, and corrections may be needed for orientation problems," the center pointed out.

The list of possible calamities doesn't end there, however. The storm wave could cause interruptions in navigation satellite communications and become a real headache for high-frequency ham radio operators, according to the center.
"In the worst case scenario, power can be lost," Norman Cohen, a space environment forecaster with the National Oceanic and Atmospheric Administration, told AFP. He said failures of power grids were more likely to occur "at higher latitudes in both hemispheres," but the geomagnetic storms -- to continue for at least several days -- would affect the whole planet.

"It will be global event. And we won't know the magnitude until it actually starts," Cohen stressed.
He said the flare observed on the surface of the Sun on Thursday has spawned a large cloud of plasma, which is heading towards the Earth. "From its appearance, we have been able to determine that it was Earth-directed," Cohen explained. "It will be a major event." The magnitude of the storms was expected to reach six or seven on a scale of nine, according to the forecaster.

As a result, orbiting satellites may experience "some orientation problems" and "will need correction from ground control," Cohen said. That may affect some communications, but television networks and cellular phones should be working normally, said the forecaster. If interruptions were to occur, they should be brief. Power grids, however, may be worst-equipped to withstand the geomagnetic onslaught from space. In 1989, most of the power grid in the Canadian province of Quebec went down for an expended period of time due to such a storm, Cohen reminded.

On the bright side, night-time skywatchers in areas far beyond the Arctic could be treated to a spectacle they have never seen before. Aurora Borealis, otherwise known as Northern Lights, could be seen in North America as far south as the US states of Oregon and Illinois, the center said. "Most of Europe will be able to see it too," added Cohen.

He said in Illinois and Oregon, the aurora will probably be visible starting at around midnight Saturday. In Europe, it is most likely to be detected on Sunday and following days after dark.

Since the poster's last paragraph degenerated into a rant that was totally divorced from the original question (which, I believe, was about *Thanksgiving*), it's a little hard for me to tell what the "reality" actually is.

If the intent was to depict Christmas as the "holiday" that "no one really gives a rat's ass about," I'd suggest a trip or two to some churches on December 25th. Deploring the commercialization of "the holiday" may be a worthy goal; mischaracterizing it's meaning and significance for millions of people worldwide is simple ignorance.

1826. How do to a contest CQ on morse code

Newsgroup: rec.radio.amateur.misc

> Please could you explain to a Brit what Thanksgiving is (apart from a
> holiday), Its something to do with 1621 I think.

Probably time to actually answer the man's question. A group we call the Pilgrims landed somewhere near Plymouth Rock Massachusetts in 1620 and supposedly celebrated their first harvest in America in 1621 inviting the local Indians who had shown them how to farm the rather poor soil of the area. They were English Calvinists probably more extreme than the Puritans who backed Cromwell and had spent a few years in Leyden hiding out before deciding that a sea trip beat learning Dutch. They were actually heading for Virginia but had a minor navigation error.

Several states had already adopted days of Thanksgiving when it became a Federal holiday in 1863 via a declaration by President Lincoln. As you may know, 1863 while it marked the hi-water mark of the Confederacy was one bloody bitch (Gettysburg and Vicksburg among others) so invoking the Almighty might well have seemed to a non-churched Lincoln a reasonable thing to do -- or it may have been frankly political which Abe was not at all above doing.

The US Virgin Islands celebrate it a month early to mark the end of the hurricane season. It has become something of a kick-off for Christmas and a good time for students to take a break. Very little thanking of God or anyone else takes place; not even the churches are all that fond of it.

Just think of it as the time Americans are starting to be subjected to 'traditional' Christmas music, most of it written during my lifetime.

Deck us all with Boston Charlie, Walla Walla Wash and Kalamazoo. Nora's freezing on the trolley. Holler Doller, cauliflower, alagaru. Walt Kelley and Pogo, gang. Don't shoot the piano player.

Is there anybody out there who cannot see the slashed zero in the parenthesis above, or in the parenthesis here (ï¿½)? I was under the impression that this character was included in standard ASCII, and therefore should be visible on all computers using western character sets. Perhaps I'm wrong.

Our village also restricts antennas above 10 feet in height. I'm surprised some ham hasn't challenged them on the basis of PRB-1. We're in a regular village, not some subdivision with a CC&R list that is miles long. Working on how to get by. There are hooks for Christmas lights outside under the rain gutter, and there are also rain gutters that form a U shape. Loading the gutters would put the feed point right next to the telephone line, however, and I'm not sure I wouldn't get a voltage high there with the Christmas tree light bit. We have never ever put up external lights, but this new house that we have moved into apparently had them at some past time. The last time I lived someplace I could work HF was back in 1988, I was still working 15/40 meters with a TR-4 and a key on the Novice bands. With the restrictions here, I might as well go dark. I can't even work 2m decently with those kind of restrictions.

Do not be fooled by the word village, the village has a population of 75,000. Just a quirk of Illinois politics.

It is obvious to thinking people that Graham has a MUCH better understanding of the workings of the crooked Democrat political machine than do those who live in these United States and opt to not vote at all. You detractors could do well to look at what he posits and think about it for a while. Ask yourself just why Al Gorebachov has hired Wm. Daley, son of the biggest and most corrupt political machine in the history of these United States. Graham obviously judges a man by the company he keeps. What is so difficult about this to grasp???
Gore has Daley. Clinton had Larry Flynt.

You're wrong. I see a question mark in the parenthesis when reading the
post, and backslash three three zero in writting this followup.

The default character set here is US-ASCII; I had to change it to
ISO-8859-1 to even get this thing to post.

TMR,
I totally agree with you. If this happens to me, I will gladly go to
court. Due to the fact that the bill plainly states that hams and other
LICENSED services are exempt, I suspect it would not even get heard.
Then I will immediately contact a communications law attorney and sue
the hell out of the city/county, police department and the stupid cop
that made the "bust". I expect that once various municipalities and LEO
experience a few of these, they will become more careful, even reluctant
to tackle an area with which they are so pitifully ignorant.

PRESS RELEASE
11/24/00 11:00 PM EST
Copyright 2000 Sunshine State News Service

MIAMI-DADE COUNTY CANVASSING BOARD REVERSES DECISION TO HAND-COUNT BALLOTS AMIDST THREATS AND ASSAULT ON FAMILY MEMBER

The three person Miami-Dade Canvassing Board initially voted at 9:00 am to hand count the 11,000 ballots that had failed to register any vote for the presidential candidate. This "undercount" was quadruple that of the previous presidential election raising questions about the County's aging vote tabulation machines.

Shortly after voting to initiate the hand count, a crowd of approximately 200 people descended upon the Supervisor of Elections office. The crowd pushed their way past guards and cornered the canvassing board members in the breakroom reserved for county employees. The crowd's initial chant of "no recount" soon changed to "we know where you live." It took the Miami-Dade police 45 minutes to move the crowd outside of the building.

Once outside the building, the crowd chased down Joe Geller, chairman of the local Democratic Party, because they falsely believed he had tried to steal a ballot. After being struck several times in the head by members of the crowd, police arrived and escorted him away from the scene. Louis Rosero, a Democratic aide, was also punched and kicked by the crowd as he made his way into the building.

Democratic party officials promptly protested these actions and charged that they had been orchestrated by State Republican party officials. These charges would seem to be substantiated by many members of the crowd who admitted that they were being paid by state and local Republican parties to participate in the protests.

The local CBS affiliate reported this afternoon that the teenage son of one of the canvassing board members had been set upon in his front yard by an unidentified group of men. The 16 year old is reported to be suffering from broken ribs and a concussion. He is under police guard for his own safety.

Three hours after initially voting to initiate the recount, the canvassing board suddenly reversed itself and announced that no recount would take place. Two members of the canvassing board declined all comment but one of the members Dan Leahy acknowledged that the intimidation tactics had lead to their decision.

Miami-Dade voters chose Gore over Bush by a 3-to-1 margin. Many observers believed that the 11,000 undercounts would yield enough votes to give Mr. Gore the election if they were individually scrutinized for loose chads. One local democratic party official who declined to be named citing concern for her family's safety complained "This is just an outrage. The Republicans are using thrid world dictator tactics to try and steal this election. I never thought I'd see events like this in America."

:
Greetings! I have for Sale or Trade an Icom IC-746. Unit is in MINT condition, except for one thing. The automatic antenna tuner does not seem to be working. Unit was purchased 3/15/2000 and I will include the warranty card. Icom told me it'd take 'em 10 days to get the rig back to me, but I'm not that patient. My loss, your gain! Rig includes box, manual, and an Icom SM-8 Desk mic with both cables. I would be willing to trade for a rig of equal value. Perhaps a Yaesu 847 w/ desk mic, or a Kenwood TS-850SAT or TS-940SAT w/ desk mic. Would consider a trade for a legal limit amp plus cash. What do ya have? I'll entertain all offers! I just bought a new FT-920, so the IC-746 is in excess to my needs now. E-mail or call w/ any offers! 73 es gud dx de N9LXX~~~ R. Blaine Fox Beloit, WI (P.S. -- Would prefer a 'local' trade...within 250 miles or so...someone in the Chicago or Milwaukee/Madison, WI area...but again, will entertain all offers!)

Dale,
All three are good amplifiers, and will do about the same
output. I would say it depends on which you 'like' best.
Personally, I like Ameritron amplifiers.
'Doc

from the arrl website...

Board to Consider Morse Code Policy Review
NEWINGTON, CT, Nov 21, 2000--The ARRL Board of Directors will review the League's position on the Morse code as an international licensing requirement when it gathers for its annual meeting in January. Because the issue is expected to come up at the IARU Region 2 Conference next October, the ARRL Executive Committee decided at its November 11 meeting in Irving, Texas, to place the issue on the Board's January agenda.

The ARRL's Morse policy was formalized by Board resolution in 1993. It supports the retention in the International Radio Regulations of the provision obliging administrations to require that applicants demonstrate ability to send and receive Morse code before they may operate below 30 MHz. Consistent with that policy, ARRL International Affairs Vice President Rod Stafford, W6ROD, cast the lone dissenting vote earlier this year at the IARU Region 3 Conference in Australia on a motion calling for the eventual elimination of Morse as an ITU requirement for HF operation.

In January, the Board may decide to reaffirm this policy, to modify it, or to seek additional input from members. In the past, a majority of members have supported the policy.

The Executive Committee also proposed that the Board determine a process for soliciting membership input on possible repartitioning of the HF bands in restructuring's wake. As part of its original restructuring package, the League had proposed "refarming" the current Novice bands to allow for more efficient use of the most crowded HF allocations. The FCC has declined to take up any possible repartitioning, however, until it's had a chance to gauge the effects of restructuring. Amateur Radio license restructuring became effective last April 15.

>One has to wonder just why amateurs can't attract lots of users to HF. One
>of
>the major problems is the inability to put up even a mediocre antenna for
>many
>hams. CC&Rs have a major effect in this.

I agree 100%. In many cases even the classic "random wire from the attic window to the apple tree" is banned. And you can bet that Gladys Kravitz is watching.

Sure, most hams won't by a restricted house if there is any other choice. But sometimes there's no choice. And how many people will move just to accomodate a hobby?

>When you add in the cost of HF
>gear,
>the incentive to upgrade is even less.

Actually, HF can be done on the cheap quite well. But doing so requires buying used gear (unthinkable to many folks used to the idea that electronic stuff is all like computers - always going down in price and obsolete in a few years). And of course the most performance for the money can be obtained by using CW....

> However, I was noting that there were
>claims that the HF bands would decline and die under the weight of all of the
>folks who could now get on with 5 wpm.

Yup, the prophets of doom haven't been proved right - yet. But neither have those who foretold of huge numbers of folks being held back by the "barrier" of "high speed" code tests. Thus the wet firecracker report.

>They didn't happen, and HF doesn't
>sound like CB normally either.

The CW parts of the bands sound just great.
>
>Finally, a ham, even a technician class ham, who builds antennas and/or gear
>for VHF, UHF, or SHF is just as much a ham as one who gets on HF, and tries
>to
>find traffic to pick up on one of the traffic nets.

Agreed. Always thought so, too.

But some folks take any criticism of the SYSTEM as a putdown of PEOPLE, while it's not meant that way at all. The person who says "dropping the code test from the Tech was a mistake" is not criticizing those who got the license after 1991.

>I also note that a ham
>interested in VHF or UHF is more likely to be recruitable for HF than a
>newcomer.

Sometimes yes, sometimes no. Many are put off by the noise and unpredictability of HF, the "huge" antennas, the crowding, and the perceived high cost.

> Hams instead have to learn to keep the hams they find, and
>encourage
>said hams to continue being hams instead of attacking them.

Agreed! But there's two sides to that story.

I don't know of an online map, but here's how it breaks down by states:

First call district:

Connecticut
Maine
Massachusetts
New Hampshire
Rhode Island
Vermont

Second call district:

New Jersey
New York

Third call district:

Delaware
Maryland
Pennsylvania

Fourth call district:

Alabama
Florida
Georgia
Kentucky
North Carolina
South Carolina
Tennessee
Virginia

Fifth call district:

Arkansas
Louisiana
Mississippi
New Mexico
Oklahoma

Texas

Sixth call district:

California
Hawaii

Seventh call district:

Alaska
Arizona
Idaho
Montana
Nevada
Oregon
Utah
Washington
Wyoming

Eighth call district:

Michigan
Ohio
West Virginia

Ninth call district:

Illinois
Indiana
Wisconsin

Tenth call district:

Colorado
Iowa
Kansas
Minnesota
Missouri
Nebraska
North Dakota
South Dakota

...Gail Atwater is a piece of dirt that deserves to be treated as such. Everyone wonders why jails are so over-crowded. Here's a perfect example. Ms. Atwater's case is scheduled to be heard by the Supreme Court on December 4, but I have a feeling that the ruling won't go her way. Handcuffing someone and placing them under arrest is common practice, and isn't really excessive force, which is the grounds for the lawsuit. I would venture to guess that the best she can hope for a a 5-4 ruling against her. For the sake of justice, I hope I'm wrong.

The following article, which explains the case, can be found at the Libertarian Party's web site at www.lp.org

Tom - N8ECW

****

WASHINGTON, DC -- Americans who like holiday traffic jams will have plenty to be thankful for during this Thanksgiving weekend: Swarms of police officers in all 50 states will be setting up random checkpoints to crack down on seatbelt violators.

"Federal bureaucrats plan to throw a roadblock in front of your holiday travel plans," warned Steve Dasbach, the Libertarian Party's national director. "They've decided that enforcing seatbelt laws is so important that they're willing to snarl traffic, interrogate motorists, write tickets, and ruin your holiday drive.

"But Libertarians say this policy is a mistake, a waste of police resources, and will just make millions of Americans curse these foolish laws on a day we should be giving thanks for life's blessings."

On Monday, U.S. Transportation Secretary Rodney Slater announced a "zero-tolerance" policy for seatbelt violators, and said 10,000 police departments in all 50 states will be mobilized to use roadblocks, checkpoints, and unmarked patrol cars to track down disobedient motorists.

Slater justified the massive police dragnet -- dubbed Operation ABC ("America Buckles up Children") -- as a way to improve compliance with child safety laws. However, the Transportation Department admits that 97% of parents already obey childhood seatbelt laws.

"The National Nannies are clearly out of control when they can deploy thousands of police officers, and inconvenience millions of holiday travelers, just because 3% of the public doesn't properly

obey seatbelt laws," said Dasbach.

Unfortunately, if you happen to forget to buckle up, you might suffer from something much worse than a traffic jam.

"Thanks to draconian seatbelt enforcement policies, you might get pulled from your car, handcuffed in front of your children, and dragged off to jail -- all for the crime of forgetting to wear a seatbelt," said Dasbach. "And that's no exaggeration: That's exactly what happened to Gail Atwater of Lago Vista, Texas, in 1994."

Atwater, America's most famous seatbelt criminal, was returning from a soccer practice with her two small children when she was pulled over, arrested, handcuffed, and jailed simply because she hadn't buckled up.

She sued, alleging excessive force, and the case, Atwater vs. Lago Vista, will be heard by the U.S. Supreme Court on December 4.

The good news is that most Americans are unlikely to be taken to jail for simply not wearing a seatbelt, said Dasbach.

"But the bad news is that you may still be caught up in the Great Thanksgiving Traffic Jam of 2000 as police search the highways for seatbelt desperados," he said. "And that's nothing to give thanks about."

The one potentially positive aspect of such random police roadblocks, said Dasbach, is that they may make many Americans rethink their support of such meddlesome "victimless crime" laws.

"Most Americans who originally supported seatbelt laws probably never thought that it would threaten their right to drive down the highway without being stopped at a police roadblock and interrogated like a criminal -- but that's exactly what's going to happen over Thanksgiving weekend in all 50 states," he said.

"The lesson here? Be very careful about giving the government more power, no matter how benign or noble the purpose. Because, unfortunately, unlike most Americans, Big Government never takes a holiday."

That is not slashed zero, it is a vowel in at least Norwegian and
Danish, the uppercase ï¿½ is at U+00D8 and the lower case ï¿½ at U+00F8.

>Yep, but an Apple computer, for instance, won't display that zero
>correctly if it was typed on an IBM/Microsoft machine.

These characters are in the same positions in Unicode, ISO-8859-1 or
Latin1 (as used by most modern unixes), Windows code page 1252 etc.

MS-DOS and Apple have both their own incompatible code pages for
Western European languages. HP-UX had their own incompatible code
pages and of course all big IBM machines use EBCDIC, which is
completely incompatible with anything else.

Never expect a character typed using the Option key on a Mac to come out the same on a Windows machine. Never expect a character typed using the Alt key on a Windows machine to come out the same on a Mac.

> > I suppose your font is proprietary to the
> > operating system from from the convicted

> (some proprietary and some not).

The character in parentheses looked somewhat like a slashed zero on this Macintosh, but it really is not. It was typed by holding down both the Shift and Option keys while typing the letter "o". If a Windows user typed what looks like a slashed zero, when I looked at it on this Mac I have no idea what it would look like, but I'll bet it would look different (unless he typed an ordinary zero; then it _WOULD_ look like a slashed zero to me).

This is one reason why Mac users should never use the Option key in e-mail or newsgroup posts, and likewise Windows users should never use the Alt key. I figured out from context some time ago that the lower and upper case Pi characters I occasionally see on this newsgroup really were intended to be 1/4 and 1/2. I can get those Pi characters by using the Option key, or both the Shift and the Option keys, with the letter "p" (easy to remember) but I have no idea what they would look like to a Windows user. Let's find out: Here's the one with Option alone: ø. And here's the one with both Shift and Option: ø.

By the way, the current versions of the Monaco and Mishawaka fonts (both monospaced), and the Chicago font (not monospaced) on the Mac give a slashed zero just by typing the ordinary zero. Since I use Mishawaka as the screen font for my e-mail program (Eudora) and my newsreader (NewsWatcher) I see lots of those slashed zeros onscreen.

Standard US-ASCII (ANSI_X3.4-1968) is that obsolete 7 bit character
encoding containing 0..9, A..Z, a..z and 24 punctuation characters
and 32 control characters. Standard US-ASCII and its international 7
versions (ISO-646, in which a few punctuation marks were replaced with
non-English vowels and consonants) were used in most non-IBM computers
into 1980's. For instance the mechanical Teletype or the VT-100
terminal supported only US-ASCII or other international 7 bit
variants.

The only way to display the (ï¿½) character on these systems is to use
a Danish or Norwegian terminal and send the 0x5C code to the terminal,
which on the US-ASCII terminal would be displayed as the backslash (\)
character.

In 1983 the VT-220 terminal supported an 8 bit with some modifications
became the ISO-8859-1 (Latin1) in 1987 supporting most Western
languages at the same time, includes the (ï¿½) character.

Thus, if you are using 7 bit devices, such as VT-100 terminals, you
will not see that character.

>> I suppose your font is proprietary to the
>> operating system from from the convicted
>> monopolist from Redmond, Washington
>> -- nicht wahr?

Western Windows variants use code page 1252, which is superset of
ISO-8859-1, so the ï¿½ is in exactly the same position.

However, in MS-DOS, the US code page 437 does not contain the ï¿½
character at all and the Western European code page 850 keeps it in a
different position, thus, some transcoding is required to display it.

The Mac Roman character set has the ï¿½ character in yet an other
position, so some transcoding is still required.

>The character in parentheses looked somewhat like a slashed zero on this
>Macintosh, but it really is not.

As far as I can figure out, there has never been any slashed zero characters in any computer character sets. However, there has been a large number of font variations that displayed the ordinary digit zero in somewhat different ways. Some used a completely round glyph, other used an elongated glyph, some a truly elliptical glyph, some a zero with a right facing slash, some with a left facing slash, some used a centre dot and some even some kind of underscore to distinguish from the letter O. All these are simply glyph variations of the ordinary zero digit.

On hard copy devices you could use overprint by sending the digit 0, backspace and slash. In Unicode a slashed zero could even be constructed by using U+0030 U+0336 (digit zero and combining long stroke overlay).

All the talks about slashed zero appearing in all fonts is a misunderstanding, by people who think that Norwegian and Danish uppercase vowel (ï¿½) U+00D8 and lover case vowel (ï¿½) U+00F8 look like a slashed zero. I am writing this on a Norwegian keyboard layout and that vowel is immediately to the right of the L-key. This paragraph should be correctly displayed on any system supporting ISO-8859-1 (Latin1).

Yes, but it's *not* a zero...it's <Option><Shift><o> Hex 'AF' which
may not display the same in other fonts or operating systems. As far
as I know, codes above 127 are not part of the ASCII standard, which
is 7-bit, and they will vary from implentation to implementaion.

An ascii zero is 30 hex. Other codes will display what looks like a slashed zero on some machines. Software, such as logging programs and call sign capture functions in terminal programs, are not likely to recognize these other characters as a zero. Sending anything other than 30 hex should be avoided. If you want to see a slashed zero, the correct way to do it is to install a font that displays a slashed zero on the screen for 30 hex.

>Give a trailer trash CB'er an inch, and they will take a mile.

The linears are already widely available and inexpensive at any hamfest. A
simple adapter and patch cord will allow a Motorola Spirit to drive a Mirage or
similar 2-meter amplifier. Should work well on 151-154Mhz.

If I remember correctly, the ASR-33 had a slash through the zero.

OK, try to read what he has first posted.
Ok, read it again.

Now read what you wrote.
Read it again.

How do you know he hasn't done this already?
He already knows that some modems cause problems. Which tells me that
he is starting to do his homework
When it comes to cable modems, they don't behave differently in
different parts of the country, hardware is hardware.
But different modems do behave differently, and that is what he is
asking.
Now I know that some cable companies are different from others, but
with the right coax, connectors and grounding they all pretty much
are the same unless they have amp or trunking problems(which would
only affect his immediate area).

You see, I have contracted out to cable companies for many years and
know how the system works.
The question this person is asking is the best possible question,
NOT.. maybe you should go down to your local ham club to find maybe
one or two people who have cable. I know I wouldn't want to base my
decision on that kind of data.

Start with the modem, that's where the problem is, other then proper
grounding.

So you see, Your little "dontcha think" answer was just an "I don't
have any idea what I am talking about, but I just have to type
something" kind of an answer.

I would suggest that you leave your simplistic little answers to
yourself unless you have some valuable data to back it up with.

I probably wouldn't have responded to you, but you just had to throw
in that "doncha think"!! Does this make you smarter? You make it
sound as though he was too stupid to think of that himself! DONCHA
THINK?

Hi;
I have a Icom IC-T81A and I am trying to put a Sub audible tone in a simplex frequency and for some reason I can not get it to work,I can not even put a duplex + or - in a simplex frequency,I turned off the Auto repeater function and that still did not help????for some reason I can not put a tone in a simplex on any of the bands.Can anybody help me on this???The reason I want to put in a squelch tone in the simplex channel is to cross band and not have it open until it hears the tone.

John KB9QNG

What I see is an equal sign ("=") with a vertical bar ("|").
It be one of the "IBM Graphical Characters" for drawing boxes: x'D8'.

>I was under the
>impression that this character was included in standard ASCII,

Standard ASCII !!! LOL !! At best ASCII is 'standard' up through
x'7F' -- and is wide open for (re)intrepretation from x'80' - x'FF'.

According to the news headers, you are using linux and slrn and your character set is declared as iso-8859-1 and the original message also contained an explicit code page declaration of 8859-1. How on earth did you manage to display the original text in MS-DOS (OEM) US code page 437 :-). There is definitely some problems with your configuration.

1884. Fraud & Immediate Machine Ballot Recount

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-26 00:00:00 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3A217D7C.675C24D2@sccoast.net>
Source record: 99063
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

A lot of people, including myself, have suggested that there was massive manipulation of the ballots during the recent hand recount process in Broward and Palm Beach.

To eliminate any possibility that this actually occurred, I think there should be an immediate machine recount of all of the ballots in these voting districts. If there was no manipulation of the ballots during the recount, then the new machine count should be exactly the same as the last machine recount.

However, I suspect that we're going to see a huge difference in those new machine recount numbers, which will prove conclusively that the hand recount process was not only flawed, but that possible intentional manipulation occurred.

And, if the recount process is as flawed as I suspect, the entire recount results should be thrown out and there should be an immediate investigation of possible fraud by those involved.

1886. Gore's Statewide Hand Recount

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-26 00:00:00 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3A217DF6.A18F6036@sccoast.net>
Source record: 99065
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Gore has repeatedly claimed that he wants a "full and accurate" count of votes in Florida, and that this was the only way to determine the true "will of the people." Republicans respond that if he truly wanted a "full and accurate" count, and if he truly is concerned with the "will of the people," than why did he only request hand recounts in districts that voted heavily for the Gore?

Gore has responded to that by saying that he has always urged a statewide hand recount, but that Bush didn't request it. Why would Bush be expected to request this? Gore is the one who is requesting the recounts. Bush has always said that there should have been no hand recounts at all.

If Gore truly wanted a statewide hand recount, because of his deep concern for the "will of the people," then why didn't he request one while he was requesting all the other hand recounts?

Absolutely correct. Regarding the Democrats "spin" on Broward county
stopping the recount, they claim it was out of fear and intimidation by the
Republican crowds.

What the news media seems to conveniently overlook when reporting this spin
(typical) is the fact that the three canvassing board members were in the
main counting room on the 17th floor- where there was a large area for the
public and the new media to observe the counts.

When it became apparent to the board members that they couldn't finish the
count of all of the ballots in time, they decided to take ONLY the 19,000
"questionable" ballots up to the 19th floor - where there is no public or
media viewing area - and COUNT THEM BEHIND CLOSED DOORS! Of course the
observers would not allow this to happen, and neither would I !

The truth of the matter is the canvassing board in Broward county GOT CAUGHT
trying to fix the count, so they quickly decided to call the whole count off
rather than expose themselves to massive media questioning and/or legal

action. All of the Democratic claims as to why they quit counting are just a typical liberal smokescreen for what really happened.

Time to call the FCC. Put both sides in prison.

Sore / Loserman 2000

:Been listenin to 3.860 for the past couple weeks
:starting around 10:00 Central. Seems there is a
:couple of stations on that freq who are at odds with
:the right wingnut politico crowd on 3.950 who meet once
:a week Sat nites at 9:00. Appears to be quite a schism
:of dotering old men on both freq's, 3.860 busy for much
:of the week mainly. Fart noises, music playing, animal
:sounds, circus caliopes, switchin sidebands till 2 and 3
:AM. Builds up to a creschendo to Saturday night when
:it's then "3.950's turn in the barrel" - and the whole cycle
:then repeats itself. Actually it's quite fun to listen to both
:these groups of senior citizens go at it, put yer teeth in the
:jar and waddle up to that radio with yer oxygen bottle from
:years of smoking and get it all out of your system! I sort of
:hope Reily leaves this circus of old fools alone for a few more
:weeks, their fun to listen to and one of the participants on 60
:sounds like he's "this far" from havin an apeshit over the proceedings.
:(you'll have to listen to guess who!) So park yer tape recorders on
:3.860 vs 3.950 folks! The proceedings will make for great background
:sound effect tapes for the front door "spooky noises" setup when the
:little urchins come knockin on the door for their candy on Nov 31st!!
:Trust me, the freq is BETTER than that classic Three Stooges
:bit when Curley dumped a bag of cats into an upright piano and Larry
:had to climb inside to retrieve them.....
:
:(note: there is another group on 3860 earlier in the evening - these folks
: are not connected to the screwballs who come on later when the
: moon rises in the evening sky...)
:
:ROTFLMAO
:
:ps: postin this Sat evening, there's already german marchin music playin on
:3950 - Think we all know already who this is eh folks...?? grin Have
:another
:drink ------!!!

Yup, that's it in a nutshell. FCC has made it clear they can't reduce code testing for a <30 MHz ham ticket with the treaty the way it is.
>
>Support home rule!

Haw, that's a good one! Would you support "home rule" for frequency allocations among the various services?

>Encourage the Board to support deletion of S25.5 at
>IARU Region 2, and WRC2003.

There will be lots of opposition to such a move.

How about a compromise that solves several problems at once?

One problem that plagues HF ham radio is inter-mode collisions - the digital folks stomp on the CW guys, the DXers running split stomp on the digital folks etc. And the situation gets worse as more modes appear.

Suppose each HF/MF amateur band were divided into three subbands - Morse, digital, and analog voice. Each mode gets its own slot, so to speak. Cross-mode QRM is eliminated. And a Morse test is only required if you want to use the Morse subbands.

End result is that everybody gets something and nobody loses anything of significance.

Why not?

Never say never. Almost all of the older home PCs had the slashed zero. My trs-80 does. I just fired up my Commodore 64 and my 128, both of them have the zero slashed (heck they even have the zero slashed on the keyboard).

A slashed zero font with it really being the zero and not a special character is a cool addition. Being Monospace helps, there aren't that many monospace character sets out there that are easy to read.

> Almost all of the older home PCs had the slashed zero.

Many early PCs displayed the ASCII zero with a slash on the screen.
The ASCII character however was 30 hex, the same character that
displays a non-slashed zero on most fonts. 30 hex is and always has
been the *only* valid ASCII code for zero. It is up to the receiving
terminal design to determine if the displayed zero character has a
slash or not. Any other character will fail in software analysis even
though it may "look" like a zero on the screen. The only proper way to
display a slashed zero is to have the receiving machine display a
special slashed zero font in response to receiving a 30 hex or to have
the receiving software send a slash zero "look alike" to the screen in
response to receiving a 30 hex.

Hello--
Also, IIRC many of the late-1970s-vintage "dumb terminals" (e.g., Televideo 910, ADM xx, etc.) either included a permanent slashed zero in their character-display ROMs or had a switchable option to display either a slashed zero (or one with a dot in the center?). Can anyone confirm this?

Many hams are popping the champagne corks, now that Congress has passed legislation enabling local law enforcement to take action against illegal CB'ers. Me thinks y'all are going to end up with a big hangover from this bill.

One of two things will now happen, depending on the locality. In some areas, this will receive a big *YAWN* from local cops who have more important things to do with their time. Things such as apprehending murder suspects, rapists, drug dealers...you know, the things they were hired to do.

In other areas, cops with too much time on their hands will now use this law as a tool to go after anyone who has an antenna on his house or car. To the hams who have been cheering and gloating over the passage of this bill, I offer the old saying "Be careful what you wish for...you just might get it." Have fun defending yourself in court (often at considerable expense) because Mrs. McGillicuddy down the street reported you to Officer Friendly as "that guy on the CB who is messing up my TV picture." If you think the average street cop can tell the difference between a Ringo Ranger and an Antron 99, you're kidding yourselves. The guy with the closest antenna is going to get the citation. Then, the burden will be on YOU to go to court and prove your innocence via your ham license.

Don't think this will happen? Come back to this newsgroup in a year and tell me I'm wrong.

I dunno, Dwight, that's really stretching it.

Deciding who goes free and who is locked up, loses property or even their life
sure sounds like "governing" to me. And being able to overturn/redefine
virtually any law sure sounds like "governing".

Consider how much changed because of Roe vs. Wade, Miranda, or any of the other
big decisions by the Supremes. Heck, the 2000 Presidential election could
depend on what the courts decide.

If that's not "governing", what is?
>
> But, if we go with a loose definition of government, or use the common
>definition of government, then I guess the judiciary could be a branch.

I think if you asked either George Bush how many branches of govt. we have, the
answer would be "three".
>
> Of course, this is not to say that was the way Bush was thinking when
>he made that statement.

He wasn't thinking, that's all. He makes occasional flubs like that - he's made
plenty during this campaign. Being able to talk off-the-cuff isn't his strong
suit.

>For all I know, perhaps he doesn't consider the
>presidency to be government unless a Republican is in office.

HAW!! That's a good one!!

> Who
>knows, in other words.
>
A simple mistake, that's all.

--

What's interesting, though, is that the really important issues of this election mess are being ignored and will be soon forgotten, regardless of who wins. For example:

- Why are there so many different methods of voting, even in the same state?
- Why are paper ballots still in use?
- Why is there no foolproof method of checking who has been voted for if paper ballots are used?
- Why is the electoral college still in existence?
- Why does the media insist on calling close elections based on such small samples? (Had they not given Florida to Gore, then taken it away, all of this hand-recount stuff would probably not have happened).

Lizard People are actually more akin to snakes. They are cold-blooded, have no emotions, and eat or abort their young.
They are usually deluded, usually socialists, and more often than not have limitless naivete to the point of being narrow minded in scope.
Lizard People have a strong hatred for self-sufficient folks who do not need the government or government programs to feed their legitimately born and wanted youngsters.
Lizard People are afraid of self-sufficient non lizards and cannot understand why anybody would want to work for anything when Lizards will give it away!
Lizards say, "Why should anybody have to work for something? It's like saying they dont DESERVE it!"

Provided local Hams do not use extremely foul language, swear or threaten
the lives of neigbors, cut antenna leads, or carry on like some of the
numb-nut CB ops do I think the Hams have little to fear. If you look at the
regs, Hams are exempt anyway.
Local cops will have to be "educated" for sure, but it will not be hard for
them to pick out the scum-bag CB ops. that so dirty up the area.
Would you rather let the dirt bags continue with their crapola and give Hams
a black eye?
Here's hoping that some of these CB pigs are shut down. Then they can
migrate to the new MURS FM freqs. that the FCC has set aside. Watch for
these ingrates to quickly screw up that service also just as soon as Radio
Shack makes the radios widely available. You think they will care about the
two watt limit? Not likely.
Watch for 100 watt linears on the new MURS freqs. and more jamming and more
mayhem with echo boxes to boot.
Give a trailer trash CB'er an inch, and they will take a mile.

Nope, if it winds up in the U.S.Congress, the House will elect the President and the Senate will elect the Vice President. Thus, Bush and Lieberman could be P & VP. Gore will get to cast the tie break vote for Lieberman and Lieberman's senate seat will be filled by a Republican. Nobody would believe that as the plot of a novel.

1922. Clinton Administration Stops Transition

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-27 00:00:00 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3A223108.8A3C7096@sccoast.net>
Source record: 98911
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

According to the laws of this country, following his certified win in Florida, Bush is now the President Elect of the United States. During a speech this evening, Bush announced plans to start the transition process as quickly as possible. When compared to previous President Elects, Bush is already several weeks behind in the process at this point, thanks to the delaying effects of Gore's endless recount demands in Florida.

However, spokesperson Beth Newberger said the General Services Administration will not give Bush access to facilities, staff, materials, or finances, normally available for the transition of presidents.

Under the 1963 Transition Act, the GSA is responsible for providing facilities, funds, staff, and materials, for the transition. The administrator of the GSA was appointed by Clinton.

This action by the GSA amounts to a direct effort by members of the Clinton administration to delay, and possibly even prevent, Bush from assuming the office he was elected to by the American people.

Dwight Stewart (W5NET)

http://www.qsl.net/w5net

1923. Rumors of Government Take-Over

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-27 00:00:00 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3A22312F.18B23F09@sccoast.net>
Source record: 98912
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Following a recent announcement by the General Services Administration that it will not provide facilities, staff, materials, or finances, for Bush to begin the transition process as the new President Elect, some Republicans have started to quietly discuss the possibility that members of the Clinton / Gore administration may be attempting to take over the government.

Under the 1963 Transition Act, the GSA is responsible for providing facilities, funds, staff, and materials, for the transition. The administrator of the GSA was appointed by Clinton. However, spokesperson Beth Newberger said the GSA will not give Bush access to facilities, staff, materials, or finances, normally available for the transition of presidents.

Some people within the Republican Party are speculating in private that this effort to stop Bush's transition by members of the Clinton administration at the GSA, combined with Gore's continued refusal to concede, might indicate an attempted take-over of the government by members of the Clinton / Gore administration.

As further evidence of this possibility, these people also point to news reports which show that Clinton and Gore have been meeting recently with key Democrats, including the Secretary of State and the Secretary of Defense.

Dwight Stewart (W5NET)

http://www.qsl.net/w5net

1924. The Press Says Bush Not Winner

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-27 00:00:00 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3A22315A.BD823698@sccoast.net>
Source record: 98913
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

If you want still another example of Democrat bias in the press, all you have to do is look at the fact that it has still not declared Bush the winner in Florida, in spite of the fact that the state has certified Bush as the winner. In addition, none of the major networks have given Bush the Florida electoral votes when they show nation-wide results.

Furthermore, that same press has not acknowledged Bush as the winner of the nation-wide election. In fact, if you look at the caption banners on the bottom of the television screen, the television new networks are still referring to Bush as the Governor of Texas, not the President Elect of the United States.

I heard that hundreds of Black Helicopters were landing in Florida ! There was one reported sighting of Janet Reno exiting a chopper wearing black patent leather hotpants, 6" spike heel whore-boots, topless, with pierced & chained nipples, and a black Death's Head tattoo on her lower abdomen. She also supposedly was wielding a Bull Whip, and had Newt Gingrinch as her Sissy-Boy-Sex-Slave, nude, in handcuffs and shackles. I'll try and get confirmation !

Since Bush hasn't actually been accepted as the President-Elect he can't use
transition funds, facilities, or personnel. Get a clue.

1928. FA: Hickock Navy Multimeter/VOM

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-27 00:00:00 UTC
From: Duane Collicott <dcollicott@nospam-idesign.com>
Message-ID: <8vtrvt$6gl$3@nnrp1.phx.gblx.net>
Source record: 98917

I have a working Hickock Navy Multimeter/VOM for auction at eBay. Starts at $80. Here's the info.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=509132128

This is an old Navy multimeter manufactured by the Hickock Electrical Instrument Company. I have tested it with a 6VDC battery and it measured it correctly. It is missing the cover that would go over the front of it. The red label on the top reads as follows:

AN/USM 116
MULTIMETER
SUPPLY: 105 to 125V 1 [unknown symbol] 50 TO 400 [cycles symbol] SERIAL B17
CONSISTS OF ACCESSORIES AND THE FOLLOWING
1 MULTIMETER ME-180/USM-116
NAVY DEPARTMENT
BUREAU OF SHIPS
CONTRACTOR & MANUFACTURER
KICKOCK ELECTRICAL INSTRUMENT CO
CLEVELAND OHIO
CONTRACT NO bsr-87359

Function dial settings:
Off, -DC, +DC, AC, MILS, OHMS.

Range dial settings:
1 X 1, 3 X 10, 10 X 100, 30 X 1K, 100 X 10K, 300 X 100K, 1000 X 1M (dc only).

Meter scales:
0 - 1 (black), 0 - 3 (black), 0 - infinity ohms (blue), 0 - 10.0 VAC (red), 0 - 3 VAC (red), 0 - 1 VAC (red).

Probes:
OHMS-MILS (red), COM. (black), D.C. (black), A.C. (black). The A.C. probe has a strange "Test Prod" at the end (see picture).

Phil,

Some logging software gives you that information as you enter the call
prefix of the station you are working, or the DX spot you want to work.
DX4WIN, for example, lists the direction and distance to the remote station,
and also includes a 'globe view" of the short- and long-path routes from
your QTH to the other station.

<Standard Disclaimer: no ties to DX4Win, just a happy customer>

Hey, sounds like a plan to me!

Why don't you take your off-topic political jeremiads off of the
amateur radio newsgroups to somewhere
like "alt.black.un.helicopters.conspiracy".

Thanks

73, Hans, K0HB

Ah, well, there is a difference between EMP and RFI.

Aircraft can handle RFI quite well. With the multiple navigation schemes in found even in small aircraft, chances are good that a pilot will recognize the interference and ignore the instruments that are malfunctioning. And, hey, we pilots are always getting reminded to keep our ded reckoning skills current. (it's "ded", short for "deduced", not "dead") Thus even total failure of all the instruments doesn't mean the pilot is lost.

I also want to point out that certified aircraft are expected to survive direct lightning strikes. This is part of the testing for certification of the aircraft. With construction such as that, how much damage could an EMP machine actually do? Sure, it could mess up the avionics, but I believe it would be incapable of doing more damage than that.

Even if such things really existed, it still doesn't add up to massive aircraft explosions. No matter what you do electrically, you can't screw up a mechanical gyroscope or a strictly air pressure instrument such as an altimeter or an air-speed indicator.

Besides, I've been hearing nonsense about the effectiveness of EMP for decades. I've also heard many rumors of some sort of thing the size

of a cola can that is supposed to kill all electronics within a hundred meters. Yet, when I ask about details, not one of the stories I've heard stands up. The biggest problem is where the power comes from. You'd need a fairly large and low impedance source of power to generate such a pulse. And let's not forget this thing needs an antenna. Nobody says much about that either. Furthermore, not one of these rumors describes what's in the cola-can sized device.

And in all the years I've heard these rumors, I haven't heard a single credible account of someone using such a device with any effectiveness.

IMHO, this is yet another case of alarmist hooey. Lots of people love to read about this sort of thing and construct conspiracy theories. It sells. That doesn't grant it any credibility, however.

Ann Arbor terminals had a slashed zero as did all of our competitors. The
IBM 3270 and compatibles had a dot in the center. The early computers did
not have video displays, they used ASR33's and other Teletype Corporation
products as I/O. The early computers that used Video terminals carried over
the slash zero as they were called "glass TTY's".

---

30 days??? With the deemphasis on CW, the band plans for the HF spectrum should be permanently scrapped and all modes allowed on all bands. The FCC has recognized reality by setting all ham CW requirements at the treaty legal minimum, so there is no longer any justification for CW sanctuaries on the bands. I like CW too, achieved 25 WPM 29 years ago, and hold an old-style Extra Class but I'm not blind. When the time has come, it's come. You can't turn back the tide.

My old Qume QVT-103 has a permanent slash-zero - the terminal is still
in use with a PDP-11 emulator running on a 486!

Dwight: You apparently can read and have multiple opinions which
you are posting to newsgroups which have NOTHING TO DO WITH
politics! We, all the members of the newsgroups you are posting to,
can also read/write, and are capable of developing our own political
opinions without your help. Please get on the internet, find some very
HOT political debate sites and get involved there. We have enough
access to the news and current events and we do NOT need to be
forced to read all your conspiracy ideas on an inappropriate site.
Many thanks,

Pat Scott, W4NW

Both examples use the extended ASCII character sets associated with your particular code page. A true slash zero will display with the normal ASCII zero in the 128 character code set (030)

That's what happens when a state violates the U.S.Constitution. :-)
There's a possiblity that the U.S.Supreme Court will require the
Florida Legislature to solve the problem by Dec. 12.

This IS ultimately the point. We don't actually vote for president, the electors do. Until now, that has simply been a formality. For the first time in a 100 years it is not just a formality. And indeed we see that it is in fact NOT the networks job to declare the winner of a presidential election.

It's all a great civics lesson for us. I think it might be interesting if somebody in the House were to object to the Florida electors when the times comes. Then we'd really see our Constitution in action.

In what could be a real interesting turn of events a lawyer has filed suit in Seminole County, Florida challenging all 15,000 votes.I believe the judge rules on it Wednesday. Seems the election official there let TWO, UNSUPERVISED, GOP VOLUNTEERS correct about 15,000 absentee ballots in the presidential race. All 15,000 (10,000 votes were for Bush) votes may be thrown out giving Gore a winning margin of about 5000 votes. Of course, I'm sure if the shoe were on the other foot and Jesse Jackson and James Carville had *corrected* ballots without supervision there wouldn't be a WORD of protest from the GOP ? ;)

This is not accurate. What was done was voter id numbers were added to
applications requesting absentee ballots. The ballots themselves were
not changed.

That's true. But did you not believe them when they declared that Bill Clinton had been elected president? The Electoral College meeting was still weeks away at that time. Did you actually wait until December 18th before you believed he was going to be the next president? If not, then who did you belive? Just a rhetorical question.

I generally do believe what I see on TV news. I agree that it's not always right. I can change my mind if I find out it is wrong, or believe it is slanted. I would hate to see the government get involved (more) in regulating what the media can publish/transmit. I would much rather have them be wrong than have them prohibited by law from calling elections, if that's what they want to do...

And if you think calling elections on TV influences voters, then shouldn't we ban many of those ridiculous TV political ads that also influence voters with nonsense information...

If not,

But, who gave these people the authority to ignore the certified
election results nation-wide that clearly shows Bush as the winner?
Following the certified results in Florida, Bush has won that state, and
therefore the electoral college vote nation-wide. The GSA has decided
to ignore those results (and you can bet they would not be ignoring
those results if they favored Gore).

First of all, Pat, you do not speak for the entire membership of this newsgroup, so stop suggesting you do by using "we" in your messages. Second, discussions about politics have been a part of these newsgroups for many, many, years. Third, we don't exist in a vacuum - politics is relavant to all of us (after all, the President appoints the head of the FCC, who has an impact on Amateur Radio regulations). And finally, if you don't like what I have to say, feel free to ignore those messages (nobody is forcing you to read them). Thank you.

Accepted by whom? According to the law, he is the President Elect.
And, in every election in recent history, those facilities, funds, and
personnel, have already been made available to the winner by this time
in the process.

I wouldn't know about that, Hammin. I'm only interested in what might happen in reality, not rumors of vague conspiracies. So I'll leave the black helicopters to you.

Actually, since I posted that message last night, those discussions have now expanded to both Republicans and Democrats in this area. And both groups are at least willing to admit that anything is possible (it would not be the first time someone has seized power in this world).

How about the Dem appointee heading up the FCC grant more licenses to
competing points of view in the interest of the Constitution?

I like the idea of "mini-stations" that almost happened.

As it is, if you are anything other than a liberal, you have to pay for
air time.

And I say that you're biased when it comes to your complaints about posts of non-political subjects. I've looked back over recent threads in this newsgroup, and I have not seen a single complaint by you to any thread started by a supporter of Gore.

However, in site of that, I'll repeat what I have said before - if you don't want to read about politics, nobody is forcing you to click on any message in this thread. Simply ignore the political messages and go about your business of reading what you are interested in.

>>
>>
>
>
On my machine you get a 'ï¿½' like this...
Turn on the 'num lock'.
While holding down 'alt' type 0, then 2, then 1, then 6 ON THE NUMERIC
KEYBOARD (or whatever you call it - you know what I mean - the one which
has the 'home', 'pg up', 'end' etc). After you have typed the '6',
release the 'alt' key.. and up pops the 'ï¿½'.

Note: the 'top row' numbers DO NOT work.

Cecil (W6RCA) did post (some time ago) a list of the interesting
characters which he had found between 'alt0130' and 'alt0255', although
I find that mine seem to start at 'alt0161' (I only get 'ï¿½' before
that). 'Alt0181' is a useful one - it's 'ï¿½'.

There are two problems...
1. I believe that everybody may not receive the 'correct' character -
eg, the 'alt0181' should be a Greek 'mu' - who didn't get this?
2. I haven't worked out how to do this on a laptop where there is no
numeric keyboard.

ï¿½ï¿½ï¿½ï¿½ï¿½ ï¿½ï¿½w!

Bush would be a fool to drop that lawsuit as long as Democrats still insist on endless recounts of ballots in Florida. If you want the lawsuits to end, urge Gore to drop his lawsuits - I guarantee that Bush will immediately drop his lawsuit at that point.

> Because he **isn't** until the Electorial

Cause, Jim, as I have been told time and time again right here on rrap,
cw/morse IS digital. Which begs the question of what the meaning of is
is?

Or maybe cw/morse really isn't digital. Maybe cw is digital, but is so extra-special that it shouldn't have to share bandspace with other digital modes which aren't necessarily any better equipped at sharing space with each other.

So if you amend your proposal to lump cw with digital, I would be more inclined to entertain the idea. That or we'll have to revisit the "CW is Digital" thread and discover why this mode cannot share bandspace with its digital sisters.

I agree. It was really kind of a subtle point that I was making. From a naieve point of view, one would assume that calling a state for a particular candidate, and announcing a winner on election day would be based on some official source. But as a matter of fact we don't have a president elect until the tallies take a circuitous route through the courts, the electoral college, and congress. In past years the results of these official actions are foregone conclusions. As it turns out there is no official source who declares a winner after the polls close on election day. The election isn't officially over for many weeks. And for the first time in anyones memory, we're finding out why this must be the case. In the event of a close election, there must be provisions in the law for settling the resulting legal disputes. It's an interesting time in American history.

No, according to the GOP, the Secretary of State, as directed by the Florida legislature, is responsible to oversee elections in Florida. Katherine Harris just happened to be elected to that position by Florida voters this term (you know, those same Florida voters that Democrats, such as yourself, claim to care so much about).

OK! I got this stupid touch lamp that just cycles up and down as I transmit... I have no other RFI problems, in fact I keep a TV running right over the operators station (sound off of course since that's the only way I can tolerate TV) and I see no sign of local RFI. I am told that it's the nature of those stupid lamps. They have a capacitive pickup that trips upon touch and it seems to also respond to rf at any frequency, at any power other than QRP and in any mode....

Has anyone been successful at "fixing" one of these lamps?

It seems to me if Bush wins, then this hand re-count will be thrown out invalidating the contesting of this certification by Gore. It also makes moot several of the lawsuits Gore is bringing regarding the hand re-counts leaving him to go back and contest the first certification and I think the period to do so may have already expired, or at least it will have by the time the decision is handed down.

If Bush loses, things will continue as they are now.

Seems to me, the only way Gore can win now is to get some more votes
certified or decertified. If it goes to the Florida Legislature or the
U.S. House of Representatives, Gore winds up sucking hind tit.

What would be a kick is if Bush becomes President and Lieberman becomes
Vice President. Lieberman's Senate position would be filled by a
Republican which would break the present tie in the Senate. No tie,
no chance for Lieberman to break the tie. :-)

Thanks, Dan. I intend to. This election is the most excitement we've had in Aemrican politics in a very long time. The possibilities are almost endless (pregnant chads, government takeovers, etc).

But, sadly, all this has to end eventually. But, while it is still available, I'm going to get all the fun out of it that I can.

Because, beyond that, all we can do is hope for the best.

Strictly speaking, no. When the electoral college meets, each
elector casts Separate ballots for President and Vice-President. So
it is possible. However, the probability is pretty low.

Good luck on E-bay. When you can buy a new digital meter for $29.00 from
Radio Shack, I hope you can find someone to pay $80.00 for a 2000 Ohms per
volt boat anchor.

I'm looking to use radio equipment for a specific application.
Motorsports to be exact.

I want something that I can put in a car with me and hook up a
microphone in my helmet to speak to crew or other teammates cars. I'll
also need earbuds to be able to hear everything. The range needs to be
about 2.5 miles at a minimum.

What sort of equipment do I need to do this? How much money?

How does licensing work?

Thanks for your help in advance

You probably want UHF so you can have a clear signal with at least 1 watt. The new FRS is a license free network. I think these are about 1 watt. The nice thing about some more advanced units is that they have a voice scrambler in them. Your crew station should have a larger antenna in order to receive and transmit well. A 4 element small beam would do the trick. With FRS no license is required but not sure if it's legal to errect a beam to the crew radio. There may be restrictions. Check with the FCC governing this!

I hope this was helpful.

Is there a standard for which paddle is the dit and which the dah? Thumb or finger? I suppose it could be different for right and left handers. I just would hate to get too comfortable one way, then find out I'm out of sync with the rest of the world.

Dwight Stewart (stewartx@sccoast.net) wrote:

: A lot of people, including myself, have suggested that there was
: massive manipulation of the ballots during the recent hand recount
: process in Broward and Palm Beach.

But of course, Gore went from (a one time "good" number) of 300 votes
difference to the final certified 531 votes difference.

: To eliminate any possibility that this actually occurred, I think
: there should be an immediate machine recount of all of the ballots in
: these voting districts. If there was no manipulation of the ballots
: during the recount, then the new machine count should be exactly the
: same as the last machine recount.

In one county North of Jacksonvile two machine counts did NOT give the
same result. Maybe some chad fell out, because Gore had ~51 more votes in
the second count. Of course the counters turned in the FIRST count ;-)

: However, I suspect that we're going to see a huge difference in those
: new machine recount numbers, which will prove conclusively that the hand
: recount process was not only flawed, but that possible intentional
: manipulation occurred.

I suspect the whole thing will be settled in court to Bush's advantage.

: And, if the recount process is as flawed as I suspect, the entire
: recount results should be thrown out and there should be an immediate
: investigation of possible fraud by those involved.

Quick;
Send it in to the Supreme Court!

: > same as the last machine recount.

It wasn't. Chads almost always fall out of the counting machines as the
counting is going on and the recounts are usually NOT the same. (So says
the inventor of the machine that was interviewed for a recent newspaper
article.)

: > However, I suspect that we're going to see a huge difference in those
: > new machine recount numbers, which will prove conclusively that the hand
: > recount process was not only flawed, but that possible intentional
: > manipulation occurred.

What "new" machine recount? That was done the day after the election. And
those numbers were the ones submitted by the FIRST deadline (except for
one county that liked the first count, apparently because Bush had more
votes!)

: > And, if the recount process is as flawed as I suspect, the entire
: > recount results should be thrown out and there should be an immediate
: > investigation of possible fraud by those involved.

Bush won! I think you are just a sore winer. (Or is that winner/whiner?)

How 'bout having a RUN OFF? Wann'a take a chance punk? ;-)
: >
: > Dwight Stewart (W5NET)

: Absolutely correct. Regarding the Democrats "spin" on Broward county
: stopping the recount,

Incorrect data.......

Fact: Miami/Dade county stopped the *hand* count. Broward county is the ONLY
one that completed the HAND count.

: they claim it was out of fear and intimidation by the Republican crowds.

Shure seems like intimidation when two of the three members are Anglo
judges have to be elected by a Hispanic majority in the next election.

: What the news media seems to conveniently overlook when reporting this spin
: (typical) is the fact that the three canvassing board members

And lawyers/politicians from EACH party that were there as observers.

: were in the
: main counting room on the 17th floor- where there was a large area for the
: public and the new media to observe the counts.

Hey something that's true!

: When it became apparent to the board members that they couldn't finish the
: count of all of the ballots in time, they decided to take ONLY the 19,000
: "questionable" ballots up to the 19th floor

The 19,000 ballots were first mentioned by the Palm Beach county election
board as "questionable". Palm Beach county is not Broward *OR* Miami/Dade
county.

Should they have taken the ballots that were correctly counted by the
machines upstairs? During one of the first machine counts the
questionable ballots were separated out. As is standard practice.

; - where there is no public or
: media viewing area - and COUNT THEM BEHIND CLOSED DOORS!

Fact: Is there any requirement that they NOT do that? The observers were
to follow them up there.

; Of course the
: observers would not allow this to happen, and neither would I !

Of course YOU wouldn't.

Incorrect data.......

Fact: the official observers were to follow the counters upstairs, but a
New Yawk "observer" already saw that many of the votes were going to Gore
and didn't want the vote to continue no matter what.

See my post quoting several newspaper articles concerning how the New Yawk
"observer" turned the dogs loose.

: The truth of the matter is the canvassing board in Broward county GOT CAUGHT
: trying to fix the count,

The truth of the matter is that you don't even know what county all this
took place in. No one got caught doing anything other than illegally
influencing the board to call off the hand count by threating their
reelections.

; so they quickly decided to call the whole count off
: rather than expose themselves to massive media questioning and/or legal
: action.

Really?

; All of the Democratic claims as to why they quit counting are just a
: typical liberal smokescreen for what really happened.

Incorrect data..... You ought to at least try to find out which county actually stopped recounting and where the votes came from. What really happened has been published in papers around the country, try to read one of the articles.

Fact: Broward county is NOT the county that stopped the hand recount. The two Anglo (of the three) board members that "decided" to stop the counting in MIAMI/DADE county will have to be reelected (partially) by a threatened 1000 angry Republican Hispanics that the New Yerker "observer" said was "on the way" (by bus) to continue their "lawfull" assembley of beating on the wall, doors etc.

: 73 de W6DKN

Please try to get the major facts correct before posting them.

Source record: 98893

Ok, I lied, but now that I have your attention:

I have a Midland 75-830 mini handie talkie. The battery pack used 10 AA cells and has a jack on the side of the battery pack. Jack has a rubber plug marked + & - .The owners manual gives no mention to this jack. Anyone have one of these things? Any idea what this jack is for? Charging maybe? If it's for charging, and I got some NiCad's, could I use my Kenwood 28AT charger? I left a message in "CB talk" but, well, they're not too sharp. Tanks.

That's incorrect, Jim. Hawaii (and all U.S. Pacific islands) make up the 13th call area, according to the FCC.

Just like KH0 is *not* part of the 0th call area and KH1 is *not* part of the 1st and KH2 is not part of the 2nd, et cetera, KH6 is *not* part of the 6th call area; KH0-KH9 make up the 13th.

BTW, the 11th call area is PR and the 12th is Alaska.

Yes, Bush won. But this is not over by a long shot - Gore has already announced lawsuit(s) to challenge the results. And the lawsuit(s) have to do with the ballot recounts, so this issue is still relavant.

Riled up?? LOL
I'm just having some fun, but it sounds as though you need to put
your cane down and ease back in your rocker!

Dumb donkey?? hehe never heard that one before!

All I am saying, is that he asked a simple question and your first
reply points a finger as if he is not smart enough to ask around. It
is quite obvious that he has done some homework DONCHA THINK? Your
suggestion was fine, but it was the last comment that suggests you
being superior and him being inferior.

You have this tendency of trying to make people look stupid... it's
just YOUR insecurities.
Read some of your previous posts!

Tell me, I your life do you always get into arguments? You seem to
get into a lot of them in this and other newsgroups, which would tell
me that you are very insecure and that...a) you are very
argumentative life and go on without listening to what others are
telling you. or b) you get pushed around and this is just a form of
relief.

Please read some of your past posts as if you didn't write them...
One little word sometimes says a lot!

>If I remember correctly, the ASR-33 had a slash through the zero.

Today we would call it a font or glyph variation. It was printed, when
0x30 was sent to the terminal (or 0xB0 if odd parity was used). There
was not a separate character code for slashed zero.

The print cylinder (or whatever it was called on ASR-33) did not
contain _both_ the ordinary zero and the slashed zero.

Thus, the slashed zero did not appear in the character set as a
separate entity but rather as a glyph variation. The same applies to
the early home computer character generators with _only_ the slashed
zero (but not ordinary zero) in the character set that others have
commented in this thread.

Today, would you considered a zero printed in italics to be a
different character when printed in boldface :-).

Paul

Just to prove a point to my other post...

Re: That HAM Movie, "Frequency"
YOUR QUOTE
"Duh... You really didn't see anything 'glaringly wrong' about it?
.;)"

I left your little smiley in for you. I see it's your little security
blanket.
Do you think you really needed to type "Duh"?
Again, your insecurities lead you to putting down others.

ANOTHER QUOTE
"A General with 13word code... Really impressive..... Not! ;)
Try for Extra with 30, dude...
Now go out and Dentron some more bad-guys, Dentron-Man!
But be sure to cancel your inappropriate cross-posting first."

Now you resort to personal attacks. Is General 13 a bad thing?
My question to you is... what are you? Moreover, does that make you
better? I didn't realize this was a contest! A definite insecurity
problem.

YET ANOTHER QUOTE
"I don't know the answer, banjass... And I'd be willing to bet that
you
don't either...
For some really strange reason, the people who act like they know the
most
are usually the ones who "have no clue..." The real experts dont
usually
need the ego-fluffing you types get from putting others down."

banjass?... i am betting you thought that was smart of you.

Your last sentence... LOL This you to a "T" LOL
I couldn't have said it better!!

I have noticed that you have a little quote that you like to use
regularly...
"Think man, think.."
I am guessing that your father repeatedly told you this from a young
age. It seems to come up a lot!

I don't feel you are a stupid person, I think that you just need
someone to pat you on the back occasionally.

You sometimes seem to know what you are talking about, but you always put that one little thing in your sentence or paragraph that diminishes the person you are talking to.

Try to give a person a helping hand without pinching him while he is getting up.

The problem is that they have too many people on a node.
A node consists of a calculated number of square city blocks. When
the node is being used to the max, it can be split up into smaller
nodes.
This is where you have to hound your cable company!

Why do you think the liberals have been so "hell bent" to grab your guns at every opportunity? Armed citizenry is the main obsticle to any group trying to seize power by force in the US. I guess that's why they are concentrating so hard on stealing an election - it's a lot safer than having citizens shoot at you... (which might happen anyway if the lib's are sucessful).

"WildBill" <hiscox@{NOSPAM}proaxis.com> wrote:
> Is there a standard for which paddle is the dit and which the dah?
> Thumb or finger?

Not in the normal sense of right and wrong. Those of us who went through a transition from straight key to bug didn't have a choice. Virtually all bugs (there were "left handed" models, but they are rare) made the dots with the thumb and the dashes with the finger. When we moved to electronic keyers, it was natural to key the same way, so "our" standard was dots-thumb/dashes-finger.

I never gave it a thought until I tried a new ham's keyer several years ago, and announced that he had it wired backwards. He pointed out that he hadn't been able to find any reference so he did it that way. I thought about it and decided it didn't really make any difference. It just depends on how you came up in CW.

Since Kenwood and Yaesu (for example) wire their key jacks opposite of each other, this issue crops up far more often as a result of that phenomenon than because of operator preference. I've taken to carrying around a "gender changer" (actually a polarity changer) comprised of a 1/4" phone plug and jack connected by a short piece of wire and cross connected. Then, no matter how anyone's paddle is wired, I can plug it in, either directly or through the "gender changer" and key CW just fine.

Incidentally, one set of my paddles (wired for Kenwood, since that is my shack radio) is in my car where a Yaesu sits, but because of the layout of the arm rest, the paddle (and cover) sits backwards for best keying. That also takes care of the wiring anomaly.

Message-ID: <VxPU5.11548$II2.1150445@newsread2.prod.itd.earthlink.net>
Source record: 98865

Hello,

I have found lots of information on this, but I am not sure if I can do what
I would like--

I would like to set up a packet station at my home (with radio/tnc),
connected to a computer that will route the packet traffic to/from the
internet.

For example, if I had my laptop with me in my car, I would have a tnc/radio,
and would like to be able to create a tcp link to the internet over my
packet link. I want this to work so I can run things like http/smtp/telnet,
and other normal internet protocols to connect to internet servers.

Is this feasable?
I understand what I need for radio equipment, although any suggestions are
appriciated, but my main concern is what software package I would use to do
this both on the gateway machine and on the laptop. I would prefer to run
windows on both ends - gateway and remote client.

Any information would be greatly appriciated.
Thanks,
Scott

Actually, although you do hear CQ FD (for Field Day) and CQ SS (for
Sweepstakes), generally just CQ or CQ TEST fills the bill for the most
active contests. A simple CQ won't be selective enough for the SOWP
test, for example, so you will hear CQ SOWP, but if the bands are full,
such as in ARRL DX or CQWW, CQ TEST or CQ is all you need. The best bet
is to listen for a while (always good advice in any radio endeavor) and
see what the masses are doing.

Dumbass Mike, ND8V, is off the air per a deal with the FCC for 9 months. I love it. Slowly the scumbags of HF are dying off. According to the FCC, Guernsey has agreed to have his Amateur license modified to prohibit operation on the high frequency bands for a period of 9 months beginning January 1, 2001 and extending to September 2, 2001. The FCC says that if there are no violations of Amateur rules through the modification period, and if there are no violations of the modification agreement, that it will not consider complaints of violations or evidence of violations existing now in any future enforcement action against his license. BWAHAHAHAHAHAHHAAHHA.

Mick,
The first thing to do is notify the telephone company
that your having this problem. Let them handle it. If
they can't 'clean up' your incoming line, then start
worrying about curing it yourself.

Anytime someone makes such a definitive statement, give them
a pencil and piece of paper, and ask them "how and why?" --
have them justify their remark to your satisfaction.

Did you plan on using your R8 on a frequency in which it's not
designed for resonance? In such a case, a tuner would be a necessity.

I had a similar experience with a lamp in my daughter's bedroom.
After fiddling with it for several months, I finally performed the William Tell Overture mod on it.

What is the William Tell Overture mod you ask???

Well, just think back to when you were a kid watching the LONE RANGER and listening to the opening music

(hum the first few bars and you'll get it) :

To the dump! To the dump! To the Dump,Dump,Dump!!!
Hi-ho Silver and away!

PS. the WTO mod cost me $67.49.

$1.49 for the gas to drive to the dump
and
$61.99 + tax for a new fake Tiffany lamp at Home Depot!

Seriously, now these lamps are just so sensitive to stray RF, and so cheaply made that you just can't mod them economically.

Sorry to burst your bubble,

73

> Cushcraft R8 because antenna tuners burn out
> coils and traps. Is this true?

While I feel that antenna tuners are generally used as a
band aid for a poor antenna, they can't in and of themselves
burn up anything.

Antenna components (coils and traps) generally burn out because they
are subjected to too much power, or to frequencies outside their design
parameters.

Strive to build/buy/prune your antennas so they present a good match to
your transmitter and you won't need an antenna tuner in any case.
Mostly they just convert RF power to heat anyhow.

I have updated FCC Enforcement website in order kick off a campaign to get a jammer hotline installed at the FCC. With the coming change in administrations it is an ideal time to go for the jugular. With all our great activist folks out there plus our communications ability it should be fun to charge ahead. I've been receiving e-mail and phone calls from all over the country from people who have taken action.
Keep up the work.

2048. Attention Myrtle Beach Home buyers and sellers: WARNING about RE Agent KARL MOSER, KE3NF

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-28 00:00:00 UTC
From: Paul <pvanasse@direcpc.com>
Message-ID: <fxYU5.4372$925.196826@news.direcpc.com>
Source record: 98882

Attention to all interested. I answered and ad (link below) from Karl Moser, KE3NF for a $150 radio he had posted for sale on this newsgroup. I mailed him the funds 1 day after he posted this item for sale on 10/26/00. He then cashed the funds on November 1, 2000. I have yet to receive my mechandise or my money back from him. I have spoken to him 3 times at his Barnhill Real Estate office in Myrtle Beach South Carolina which he reduntantly states that the items or my check will be returned. The last conversation I had with him was 9 days ago which I still have received nothing to date. (16:45 11/27/00)

Yesterday on 11/26/00 I filed Felony charges with the United States Postal Service for Postal Mail Fraud and Postal Interstate Mechandise Fraud. I am also forwarding my Felony complaint to The Department of Business Regulations Real Estate Division in South Carolina because a felony conviction will result in the revocation of Mr. Mosers real estate license.

If Mr. Moser cannot be trustworthy enough with my $150 sale, do you think he is qualified to handle a real estate transaction worth tens of thousands of dollars to you. Please take my warning for what its worth.

Below is the link for the radio ads placed in alt.ham-radio.marketplace.

>Chapel Hill, North Carolina

It depends on the particular contest. Some are of the form
"CQ __" where you fill in the blank with whatever the contest
organizers specify, e.g., "CQ SS" to be used during the Sweep-
stakes. Prior to a contest occurring, announcements will be
published in the magazines (and their web sites); the format
of the CQ will be given.

I imagine there is a web site devoted to contest announcements
(Rod, help!).

Have fun!

I have a lot of REALLY GOOD USED TEST EQUIPMENT for sale, VERY reasonably priced, at

http://www.fullnet.com/u/tomg/gooteesu.htm

I have lots of Tektronix oscilloscopes of all types (JUST GOT 33 MORE!), lots of 7000 and 500 series plug-ins (JUST GOT 50 MORE!) and mainframes, Tek manuals, lots of Hewlett Packard (HP) equipment, General Radio items, and many other manufacturers' test equipment and accessories, including some tube tester units, curve tracers, spectrum analyzers, noise/distortion testers, signal generators, meters, power supplies, etc. I also have a varied selection of new electronic components and used vacuum tubes/valves.

The equipment is all inspected and tested (by an electrical engineer (me)) in detail, and working, before being sold. Cleaning and minor repairs may also be done. ALL EQUIPMENT HAS A MONEY-BACK, RIGHT-OF-RETURN GUARANTEE. Any defects or problems that I can find will be noted in each item's description.

I accept credit cards (through Paypal (it's free)), money orders, personal or company checks, cash, gold, ...

Don't like my prices? NO REASONABLE OFFERS WILL BE REFUSED! Please, take a look, right now.

Thanks, very much.

Which is, by Florida law, illegal. Also, a democrat wanted to do the
EXACT same thing and was refused by the REPUBLICAN election board
official.

Ok, where did I say that it was legal? I only pointed out that it was
not BALLOTS that were changed but it was REQUESTS for BALLOTS that were
changed. The original post was not accurate.There is a big difference
between adding voter id numbers to applications for absentee ballots,
and being left alone in a room unsupervised "correcting" ballots. I
have no idea if it was legal or not.

Source record: 98801

Well I am pleased that as a result of my complaint postings here, and on other NG's, I received both an email and a voice mail message from Mr. Moser, KE3NF last evening. He is again stating that my check is in the mail. We'll see how it goes before any charges are dropped.

I thank all of you on this group who had to bear witness to this dirty laundry being aired on this NG however I believe if it were not for the broad communications power of this and other groups, I would have never gotten any response at all. I am very sorry that the subject was out of topic for this group but I felt it was the only way to enlighted the accused with the scope and the seriousness of the subject matter.

Thanks again and 73

Thanks - I have actually had mine wired "correctly" all along. One problem I noted was that my ICOM HF rig has reverse wiring from my MFJ Keyer. I haven't yet tried CW from my Radio Shack 10M mobile.

Where in my message did I indicate that you made reference to its
legality?

I was only adding facts to the issue at hand. As reported by several
news organizations, it IS illegal under FL law to make ANY alterations,
changes or additions unless you are a legal guardian, or family member
of the applicant.

It is also a fact that a Democrat tried the same thing, but was
rebuffed by the Republican election board offical. That case is
pending at this moment.

Screw the rest of the world. Will they be using your radio? What's comfortable and effectively efficient for you? That's all that counts. Personally, I use the springs on my Bencher keyer as a "OQCMR" ("Outgoing QSL Card/Mail" Rack), and the paddles as a "CCAD" ("Coffee Cup Alignment Device"). A shack is only as good as the placement of the coffee cup...it's gotta be just right, you know?

A lost Commandment: #11. "Thou shall enjoy your CW operating and the placement of the dahs and dits on thous paddles any damned way thou does please."

73 and Good luck.

I had the same problem and used the Fred Flintstone Method.

What's the Fred Flintstone Method?

Fred Flintstone didn't have those anoying TOLs (Touch-On-Lamps). While he was operating his KW (or so) on 3.880 (AM, of course) into a vertical phased array, for light he just placed a candle into the mouth of a Rockadilla (who was happy to hold that candle in his mouth since he was at least inside and warm for the night).

Either a) get used to the TOL. b) unplug/replace the TOL and get yourself a Rockadilla and a supply of candles.

2084. FS: SMA-TO-BNC PROTECTIVE ADAPTER

Newsgroup: rec.radio.amateur.misc
Date: 2000-11-29 00:00:00 UTC
From: gulyas@netzero.net
Message-ID: <904511rhe1@nnrp1.deja.com>
Source record: 98808
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

If you have a need for an SMA-TO-BNC antenna adapter that is custom made to fit and protect your H.T. or scanner radio, I have the solution.

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed for moisture and dirt protection.
The base also provides an excellent support for any length of antenna or application.
No need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000 Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify radio model when ordering)

My response to the trilly-voiced detractors of the Boy Scouts was to write a letter to United Way and tell them to not bother me ever again for donations. I then turned about and sent a check for $30.oo to the Boy Scouts of America and let them know that I will be in full support of them both monetarily and morally.
I may be a voice in the wilderness, but it is high time to let these gay sympathizers know that mainstream America dislikes their sick agenda.
Homophobe? I ain't no stinkin' Homophobe! I just do not like the Gay Agenda!

Personally Don, I think they're worth the price and so do a lot of other folks out here. Nobody was selling them for $2 at our "last hamfest". The local electronics parts house has them for $10 ea. but they do not have the nice rubber cover that Stephen's adapter has. And yes, they protect better than the regular adapters. If you had purchased one from Stephen, you would have realized that and acted a little more mature(maybe).

You might actually look at Stephen's web pages, where he has a picture
of the adapter. It clearly isn't just a standard SMA to BNC adapter
because of the rubber sleeve. Now, I can't say it's functionally
better because of that - I only own a standard adapter, not one of
Stephen's creations. But I'm willing to give him the benefit of the
doubt.

You appear ready to trash what he's offering without even bothering
to look.

The other option is to bring up the Character Map application (in Accessories). You can then search for the character you want. Click on the character, then click on Select, then Copy. The character is now on the clipboard, and you can paste into your main application. Slower, but works fine.

Hi Thanks for reading my urgent post,

I just entered my paper log onto the pc using genlog software,the point
allocation is auto,and questionable as a P29 scored 3 points but ;
V73
V63
FK8
ZL
KH2
KH6
KH8
FO
DXI
KH4
PM8
3D2
all scored 1 point each ,
from what i read in the rules all other contacts outside my continent score
3 points each,so can someone please let me what is considered to be within
my continent,
i believe most of the contacts above should be 3 pointers any comments ,
i've just spent the last 6 hours at the pc ,not going to bed yet (3:50am)
will check for a response after next coffee,
thanks for your help,
Paul,,,,,vk3ddu

Thanks for reading this.
Could anyone out there who has and is still using a Standard 528 dual
band handy, make me a copy of the manual please.
This is for insurance proposes as mine has been recently stolen.
So, if anybody is offered a Standard 528 with no battery pack and aerial
and is damaged by the fact that a battery pack will not 'clip' onto the
bottom
of the radio because the casting is damaged,
please let me know.
Regards,

I dunno - that would depend on factors like use of the mode, bandwidth, etc.
How about the lowest 75-100 kHz? Basic concept could be that each band (except
perhaps 30 meters) is (approximately) 50% analog phone, 25% "digital", 25% CW.

14000-14075 CW only
14075-14150 "digital" only
14150-14350 analog phone only

You really don't need to "challenge" those types of restrictions. With PRB-1 they (the unreasonable restrictions) for all practical purposes do not exist for the licensed Ham. I certainly would not allow something like that to limit my enjoyment of my chosen hobby.If your not completely sure of how to proceed why not make a call to the ARRL, they have people there that can give you guidance and advice and even supply you with the necessary "legalese" to present to your local governing body.I went through something quite similar, you'd be surpprised how simple it can be.I my case, once I presented the facts of PRB-1 to the local code enforcement office I was given the green light without another word.

Dwight,
If Al's party can't convince him that he's doing
more harm to his party than good, at this point, it
will end when it goes to the U.S. Supreme Court.
The Florida Supreme Court 'blew' it when they
changed the existing state law about a dead-line.
They have no authority to 'make' or change law, only
interpret it. The existing state law is straight-
forward and understandable. They 'goofed'...

Dwight Stewart (stewartx@sccoast.net) wrote:

: Hey, I have a serious question for everyone out there - when do you
: think this election is actually going to end?

Dec 12th.

: It's been 23 days since
: the election and we are still not even close to a conclusion. In fact,
: both candidates are more firmly entrenched now than they were two weeks
: ago. Do you really think Gore is ever going to actually give a
: concession speech? What about Bush?

Bush?
Well Clinton is sending him "intellegence" reports.

: Gore seems determined to file as many lawsuits as needed to get his
: way.

Why -did- Bush file the first one? Why did he NOT want a hand recount?

; But, if those lawsuits do end up favoring Gore (and he gets the
: votes to win), what is to stop Bush from just filing more lawsuits of
: his own?

The tanks sitting on the Texas state shack front lawn. :) <-----<<<<<<<<<<

; And, if Bush were to win those lawsuits, what is to stop Gore
: from just filing even more lawsuits?

This is getting corn-fuzing.

: If neither candidate is willing give in, who has the authority to
: really end all this? The Florida state legislature is not going to end
: it by naming electors - lawsuits will be filed. The Congress can step
: in, but a challenge to that would almost certainly be filed with the
: Supreme Court. The electoral college deadline is most certainly not
: going to end the lawsuits. And, at this point, I seriously doubt even
: the electoral college vote itself will decide the issue.

: So, what happens if we don't have a new President in January? Do we
: end up with Clinton in the White House until the situation is resolved?

Yep ==80

: How long do you think the Republicans are going to tolerate that?

Well they tried for 6 years and 60+ million dollars to put an end to
it....but.......

Don't they already legitimately control the Executive Branch? Aren't they entitled to until 20 January, 2001?

> However, spokesperson Beth Newberger said the GSA will not give Bush
> access to facilities, staff, materials, or finances, normally
> available for the transition of presidents.

Is this a complete sentence? Shouldn't it include the reason to be a responsibly reported statement? The reason, of course, is that despite all the rhetoric, the election issues have not been resolved, and even discounting that, the electoral college doesn't vote until December, and the House doesn't count those votes until January.

> Some people within the Republican Party are speculating in private

Name some.

> ...by members of the Clinton administration at the GSA,

By definition, every federal employee who serves in the Executive Branch is a "member of XXXX administration." When I was a lowly employee in the FAA, by definition I was part of the Johnson, Nixon, Ford, Carter, Reagan, Bush, and Clinton administrations. Trust me when I tell you that neither my beliefs, my job description, nor my performance were affected by those associations. To have said that some action I took in accordance with my job was because I was a member of the XXXX administration is stretching logic past the point of breaking. Maybe the first 2 or 3 levels, from Department Secretary down can truly be said to be "part of an administration" in the sense you are trying to convey.

> ...might indicate an attempted take-over of the government by members
> of the Clinton / Gore administration.

How do you "take over" what you already legitimately control?

> As further evidence of this possibility, these people also point to
> news reports which show that Clinton and Gore have been meeting

> recently with key Democrats, including the Secretary of State and the
> Secretary of Defense.

As has already been pointed out to you it would be expected as a matter of course that President Clinton and his staff would meet, not only with his cabinet members, but other key officials of the government. I wouldn't be surprised to learn he may have met with some key republicans, too. Where does that put them in your theory?

The irresponsible posting of such nonsensical speculations is why you tend to get a heated and derisive response from some people.

Hey, Dwight, I certainly HOPE the President holds regular meetings
with his Cabinet members!

And I hate to spoil your lame-assed conspiracy theory by pointing out
the the Secretary of Defense is a Republican, not a "key Democrat".

Doncha ya just hate it when someone introduces the *facts* and
disintegrates your dump huck rant!

Now can we return this news groups to discussion about AMATEUR RADIO?

You may be able to clean up the phone a bit with one of the Radio Shack
telephone interference filters.

For info on telephone RFI, see:

http://www.arrl.org/tis/info/rfitel.html
http://www.fcc.gov/cib/Public_Notices/heee1.html

However, the electric fence may also have some responsibility here. If it
is getting into the phones, it is also getting into nearby radio and
possibly television reception.

See:

http://www.arrl.org/tis/info/fence.html

Subject: Re: ARRL Board to Consider Morse Code Policy Review
Date: Thursday, November 30, 2000 10:44 AM

You really don't need to "challenge" those types of restrictions. With PRB-1 they (the unreasonable restrictions) for all practical purposes do not exist for the licensed Ham. I certainly would not allow something like that to limit my enjoyment of my chosen hobby.If your not completely sure of how to proceed why not make a call to the ARRL, they have people there that can give you guidance and advice and even supply you with the necessary "legalese" to present to your local governing body.I went through something quite similar, you'd be surpprised how simple it can be.I my case, once I presented the facts of PRB-1 to the local code enforcement office I was given the green light without another word.

Great little radio indeed!! An external speaker will do wonders (it has a very small internal speaker) Please let me know if any stations you work tell you that you have a slight hum in your audio.Mine does when in the PL mode. When it is working a repeater where no PL is used there is no hum. Yaesu said that the PL on the radio was well within factory specifications when I returned it to have it looked at. It is not a big problem so I am curious if this problem is common to other FT 90's.

US Constitution
Amendment XX (20)

1. The terms of the President and the Vice President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3rd day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3rd day of January, unless they shall by law appoint a different day.

3. If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice President elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, the the Vice President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice President elect shall have qualified, declaring who shall then ast as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President of Vice President shall have qualified.

Ammendment XXII (22)

1. No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as President , for more than two years of a term to which some other person was elected President shall be elected to the office of the President more thanb once. But this Article shall not apply to any person holding the office of President, when this Article was proposed by Congress, and shall not prevent any person who may be holding the office of President, or acting as President, during the term within which this Article becomes operative from holding the office of President or acting as President during thr remainder of such term.

It will end when as soon as Janet gets tired of it all and sends in the ATF
so they can shoot holes in enough ballots so the count comes out in Gore's
favor.

Of course Hillary probably will demand that Bubba gets Gore to concede, so
she is in prefect position to run in 4 years.

My goodness! The hum *is* the PL tone itself! Pick an unused simplex
frequency and listen to your transmission on a scanner; as you change
the PL tone, the tone of that "hum" will change because the "hum" is
the actual PL tone.

I also think that they are fine. Especially with my small ICOM R-2 with a telescopic whip. I have already destroyed one adapter by putting the rig in my pocket as I sat in a car, and I was glad that the adapter sacrificed it's life rather than my rig's SMA connector.
Regular NG readers will notice that Stephen only advertises via posting at 4 month intervals or so.
I have no problem with that at all. Especially since his adapters are quality products.

Source record: 98822

Greetings!

Up for grabs is an immaculate (I mean TRULY immaculate) Kenwood TS-850SAT. This one didn't look any better when it came out of the box from the factory! I cannot find a scratch, fault, or blemish anywhere on this rig! If you are a Kenwood fan, you already know the features of this competition class, world renowned transceiver! And this one is LOADED with the YK-88C-1 filter, the YG-455C-1 CW Crystal Filter, the VRU-2 Digital Voice Recorder unit, the VS-2 Voice Synthesizer Unit, and the Kenwood IF-232C Computer Interface with all cabling! Also includes the original stock microphone and box in MINT condition! Only thing that shows any wear on this outfit is the manual, and it's not in bad shape at all...schematics included. If you can find a cleaner TS-850SAT out there anywhere, I'll eat my shorts, Hi Hi!!! I would prefer someone within driving/meeting distance on this one, so you can appreciate the true beauty of this one!

For those of you not familiar, the Kenwood TS-850SAT is called by many one of the best HF rigs ever manufactured! It CERTAINLY has one of the best receivers of any rig! Includes 160-10 meters (WARC included) with general coverage receiver. Features a great automatic antenna tuner, dual VFO's, dual NB, slope tuning, adjustable AGC, memory 'channels', I could go on and on...look at the product reviews section on www.eham.net for further comments on this great rig!

I am really looking to trade this rig...would like at least a KW amplifier with a lower-end rig...something along the lines of an SB-220 in excellent condition with an older rig would suffice. I'll listen to any and all offers. Don't be afraid to bounce an idea off of me! I would also prefer that the deal be completed in person. Anyone in the Chicago or Rockford, IL area interested? How about the Madison or Milwaukee, WI area? E-mail me with any and all offers!

Sorry for the length of this post! I don't usually get this wordy but this one's a true beauty!

So why is it that he's displaying hate, but not the guy exulting over abuse of one of the few groups universally recognized as a force for good in the lives of boys?

For what it's worth, having followed the link and read the article, I can explain the difference between discrimination by race and refusing to accept homosexual leaders: parents of the boys don't worry about us going out into the woods and forcing their kids to become some other race. They do have fears about them being out in the woods with gay leaders and experiencing unwanted sexual attention. Remember that Cub Scouts are 6 to 10, Boy Scouts are 11 to 18. In these days with the media focusing on every negative experience available, be a parent and see if you don't have the same worries.

so
> extra-special that it shouldn't have to share bandspace with other
> digital modes which aren't necessarily any better equipped at sharing
> space with each other.

The various "keyboard modes" (let's use that term) are all
automatically encoded and decoded. And many of their users
don't "listen" to the signal at all.

Morse/CW IS different. It's usually manually encoded and decoded.
>
> So if you amend your proposal to lump cw with digital, I would be more
> inclined to entertain the idea.

So you would have S25.5 revised so that all amateurs who use keyboard
modes or Morse have to pass a Morse test?

> That or we'll have to revisit the "CW
> is Digital" thread and discover why this mode cannot share bandspace
> with its digital sisters.

There are two issues. The first is interference and compatibility.
Whether various modes are compatible in the same bandspace depends on
their characteristics. The question is not just keyboards vs. paddles -
it's things like SSB vs. PSK31. Do you support the abolition of HF
subbands-by-mode?

The second is getting widespread support to change S25.5. By setting up
Morse/CW only subbands, and requiring a Morse test ONLY for access to
those subbands (and nowhere else), enough widespread support for the
idea may be gained to make it a sure thing.

So I ask again: What would be the problem with splitting the HF amateur
bands into separate subbands for analog voice, "digital", and Morse/CW?
And a Morse test would only be required for access to the Morse/CW
subbands?

Sorry Ran. I had not heard about the democrat being denied of the same
privilege. Do you have a reference? I would like to find out more about
that. Was it in the same county? It will be interesting to see how this
one shakes down.

I've got a General Instrument Surf Board, and it's quiet - I've unplugged it, and reconnected it to the mains, over and over, and I haven't heard a peep! I have had problems with my monitor, and with a couple of light dimmers in the house, but not a whisper from the cable modem. If you have the dosh to pay for it, I'd say do it now - you will wonder how the hell you dealt with snail - speed modems for so long!

Hey, I have a serious question for everyone out there - when do you think this election is actually going to end? It's been 23 days since the election and we are still not even close to a conclusion. In fact, both candidates are more firmly entrenched now than they were two weeks ago. Do you really think Gore is ever going to actually give a concession speech? What about Bush?

Gore seems determined to file as many lawsuits as needed to get his way. But, if those lawsuits do end up favoring Gore (and he gets the votes to win), what is to stop Bush from just filing more lawsuits of his own? And, if Bush were to win those lawsuits, what is to stop Gore from just filing even more lawsuits?

If neither candidate is willing give in, who has the authority to really end all this? The Florida state legislature is not going to end it by naming electors - lawsuits will be filed. The Congress can step in, but a challenge to that would almost certainly be filed with the Supreme Court. The electoral college deadline is most certainly not going to end the lawsuits. And, at this point, I seriously doubt even the electoral college vote itself will decide the issue.

So, what happens if we don't have a new President in January? Do we end up with Clinton in the White House until the situation is resolved? How long do you think the Republicans are going to tolerate that?

You forgot one - a representative of the voter. The defense team is going to argue that the Republicans were just acting as a representative of the voter when they added the missing information (at the request of the clerk).

> It is also a fact that a Democrat tried
> the same thing, but was rebuffed by the

That is not the story I heard. According to a CNN story, the computers were down when the Democrats came by, so they were not able to add the information at that time. However, the Democrats returned later, added the information, and the clerk accepted the ballots (which were included in the count).

Did you check any of the listing links to see if the auction is still there? Ebay does not always delete the listing when they delete an auction.

And it does take them two or three days to discover and actually get around to removing an auction. In fact, some of the sellers are depending on that delay - they list their address or phone number on the auction page hoping that people will contact them before the auction is removed.

Gore will concede when the courts pry his cold, clammy, hands away from the
illegal ballots. Gore is a loser. If he had any balls, he would concede.

Source record: 98637

Mr Hammer,

I can certainly see why you think LA is such a "great" city. I also think it is odd that *you* think an organization is "discriminatory" because they have certain values and beliefs that are different from yours. You want your "agenda" recognized while everyone else who happens not to agree you want slapped down, kicked out, or de-certified.

Under all the crap about gay and lesbian "rights" is the REAL deal. Being "gay" is not an issue of "discrimination". People have been discriminated against, denied civil rights, kept from voting based upon their color, national origin, religion, or even the way they parted their hair. YOU, sir(?) have NOT been discriminated against and being "gay" (shudder) is not the issue, either. The issue is having a life-style that most people object to, and instead of just keeping it to yourself, doing whatever it is you do in private, you attempt to rub everybody else's nose in it and *force* us to accept something we will never accept. And if that makes me a homophobe, then so be it. However, having said that, I will also make it known that I respect people enough to allow them to carry on their lives, vote, attend or not attend church, and generally carry on their lives as they see fit. Just as I wouldn't like for someone to force golf on me, or baseball, or even ham radio, I DON'T like gays attempting to force their lifestyle on me. I accept society's majority instincts and moral thinking that homosexuality is wrong, and agree with the Book of Romans, Chapter 1 that such activity is an abomination to God. Some try to say they were "born" that way, and I won't get into an useless argument over whether that is true or false. What I WILL say is that, since the 1970s, parts of our society have shirked responsibility for their own behavior and always find some "thing" or someone "else" to blame for their actions. So if "gays" were "born" that way, they are STILL responsible for how they act, particularly in public, no matter how they are "inclined". In other words, when in Rome, do as the Romans do. We must conform to the general behavior of society as a whole in order to function.

I therefore support the BSA's policy on homosexuals, particularly where it pertains to Scout leaders. Why? Just as heterosexuals, who are not morally upright, can become attracted to a child of the opposite sex, I believe the same thing could happen in the case of an impressionable 12 y/o Boy Scout and a homosexual Scout leader. I also must look upon the "gay" movement's impassioned attempts to either be involved with scouting, or discredit their policies with great suspicion. Considering the issues involved, why is it so *important* for gays to be involved in scouting? Why is it such a big deal? Whether boys, or even Girl Scouts, would be molested, I can't say, but I can say that as far as my

child is concerned, I am not willing to take that risk.

Finally, as far as LA is concerned, and most of the state of California, for that matter, I don't plan to ever be there anyway, and if Los Angeles ever falls victim to the "BIG ONE" and slides into the sea, I have to question whether we would not be just as well off without it. Might as well take San Fran with it, too.

Jerry

They come from the Economist about a year ago reporting on some genetic research into homosexuality. In spite of its name, they do a great job of reporting on scientific issues. Obviously, any figure is subject to both definition and difficulties of measurement.

I am well aware that 10% is bandied about but I don't think any serious researcher accepts a figure more than 5%. Somehow I find Lambda / (10**0.5) or Lamda **0.5 to be closer to the truth for these nefarious purposes in any case hence the 1 in 30. It is in the lower range of guesstimates.

A couple of recent oddities from Y-chromosome research: European men appear to have a maximum of ten fathers, and Jefferson's Y chromosome had a weird twist in it that makes it relatively easy to spot. Didn't seem to hurt old TJ's offspring.

Lighten up, you Liberals! It's just a joke!
.....
Gay George goes into the doctor's office and has some tests run.
The doctor comes back and says "George, I am not going to beat
around the bush. You have AIDS."
George is devastated. "Doc, what can I do?"
The doctor says "I want you to go home and eat 5
pounds of spicy sausage, a head of cabbage, 20 un-peeled carrots
drenched in hot sauce, 10 Jalapeno peppers, 40 walnuts and 40
peanuts, box of Grape nuts cereal, and top it off with a gallon of
prune juice."
George asks, "Will that cure me, Doc?"
The doctor replied, "No, but it should leave you with a better
understanding of what your ass is for."

I rest my case, the Republicans would do the moral thing. Your folks on the other hand think that oral sex doesn't count, and neither do marriage vows. Democrats have no problems killing a baby as it leaves the birth canal, why should stealing an election seem any less moral?

Not right off. I don't save them. Oxford is hip deep into this sort of thing but I would hate to attribute it to them; it begins to look like half of Britain is engaged in research that is too politically hot for the US.

We have a stem cell researcher at U Neb Med Center well on the path to a Nobel but the local God Squad doesn't like stem cell research because it 'encourages abortion'. Much like RU486 which has some real potential for hormone-dependent tumors (like breast cancer) but runs afoul of the Squad; kill a Commie (or your female neighbor) for Christ!! If we don't step on these Yahoos before too long they'll be out in the cemetery digging up cadavers again.

Might I ask what use you may have for this? Three to five percent is about the window most researchers accept for the proportion of gay males in the population -- about the same as left-handedness or extremely hi or lo IQs. Big enough to make the case for genetic basis but not enough to make Lamda a political bloc any more than Mensa is one. Were it not for Caleb, the God Squad would probably be out hunting lefties -- a group which has more than its share of both the great and the criminally insane. There is a lot we don't know about the workings of God.

My real concern here is the tendency of the children of the overly-pious to do something incredibly stupid when, as in one famous case, they find they do not fit the mold. A kid finding he was gay took it out on the only group lower in the food chain than he perceived himself to be -- young men who were both gay and black. His name was Jeffrey Dahmer. The correlation between extreme religion and serial killers is another hot potato not likely to be researched at East Beartooth A & M.

Hi,

For those that haven't found it yet...

http://www.kenwood.de/ts2000.htm
http://www.kenwood.net/products/index.cfm?AMA=open&ama_bstat=open&radio=
TS-2000&selection=Amateur
http://hfelectronics.telenet.be/kenwood/kenwood_pre.htm

Estimated price is about $2300 - $2500

One thing is however still not clear, can I work satellites in SSB mode
(ie. simultaneous TX and RX on different bands in SSB) ? They always
refer to the subband as AM-FM only ???? An old TS-790 can do it... the
new TS-2000 not ????

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated November 13, 2000

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

JANUARY 2001

Jan 28 (Sun): Cicero, IL - WCRA Mid-winter hamfest 2001. Hawthorn Park on S. Laramie Avenue, Cicero, Illinois Note change of venue 2 blocks south of 2000 hamfest! The new location, Hawthorn Race Park, is much nicer than the Odeum. Cleaner, brighter, better food. Tickets $5.00 in advance with 4 stubs. Parking is free. Advance tickets from Kurt F. Rubin, kb9rto@arrl.net and John E. Wiley, K9FID, johnwiley@lucent.com

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

I downloaded the font and installed it. Now my zero's are slashed!

Unfortunately, I have lost the ability to distinguish between

0 and ï¿½

They are exactly the same! I will never be able to read Norwegian
again! However, I couldn't read Norwegian before, so the impact
will probably be minimal.

Interestingly, some of the other programs I run that insist on using
fixed-width fonts, notably Not-GNU, don't recognize the font as having
that characteristic. I wonder if that's a Windows setup thing or is
there a bit set in the font file itself that tells everybody it is
is that way?

2188. power supply for htx-10

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-01 00:00:00 UTC
From: dangling_reference@my-deja.com
Message-ID: <908iv4$cl7$1@nnrp1.deja.com>
Source record: 98767

I picked up an htx-10 from Radio Shack after renewing my license (10+ years of inactivity). It's a nice radio and obviously a good value.

I want to use it (initially anyway) as a base station. I hooked it up to a PC power supply so I could listen. Is this a bad idea? If so, why? Where could I get a half decent regulated power supply that can handle this radio (7 amps) without spending nearly as much as I paid for the radio?

Also, I live in a townhouse. I've got a huge attic, that can easily house a 10M dipole. But I'm afraid to death of interfering with neighbors tv sets and so on. How much of an issue would this be with only 25W and a tuned antenna?

Finally, I may decide to use this as a mobil rig, any suggestions on a good 10M magmount antenna?

Thanks

Interesting, but all supposition on your part. I believe that if the situation were reversed, Bush would have done as Nixon and others of the Republican party have done, and conceded for the good of the country. History is on my side in this matter, your scenario is based on a hypothetical that has never existed, and further ascribes what the Democrats would do to Republicans.

Sure, Brian. Why not?

Are there so many users of digital modes on 20 meters that 75 kHz of
exclusive space on that band is not enough for them? Not from what I've
seen and heard.

Here's one indicator: For several years now, the ARRL has been trying
to encourage the use of digital modes on Field Day. A digital FD QSO is
worth double the points of a 'phone one, for instance. And there have
been plenty of articles in the mags about PSK31 and other digital
modes. (When's the last time you saw a QST article about CW operation?)
Yet on FD this year CW contacts outnumbered digital by about 45 to 1.

How much non-voice HF amateur operating do YOU do, Brian?
>
> Would this be a worldwide allocation or could the Canadians use phone
> anywhere they want?

Worldwide, on the bands which are worldwide exclusive amateur.
>
> I think I am beginning to see some posturing in response to the ARRL
> request.

"Posturing"? By whom? I don't understand.

The idea is to solve several problems at once.

You're mistaken, Brian.

I no longer read nor post to rrap. Your post showed up on
rec.radio.amateur.misc. In fact, when viewed in original usenet format
(deja lets you do this easily), the of yours that post I'm replying to
is ONLY on rec.radio.amateur.misc.

I want to give each type of mode (analog voice/image, "digital", and
CW/Morse) its own dedicated territory.

No, it's not like the others. You don't see anyone encoding or decoding
RTTY by themselves. Morse operation is VERY different.

> That some wish to make
> and break contacts manually sending imperfect code is their option.

Hah! That's a good one.

The idea is to change the status quo so that only those who want to use
Morse need pass a test. It's a compromise.

I do too - but they aren't working like they used to.

> not an iron fist,

In other words, you want to run high power SSB on 14003, and if anybody
doesn't like it, tough.

> not a
> scheme to set up some exclusive club.

What "exclusive club"? The US code tests have been reduced to 5 wpm,
the written tests are down to 3 multiple-guess published-Q&A things,
and there's no waiting period, age requirement or quota for any
license. Heck, the OLD tests have been passed by third graders.

Next thing you'll tell us is that the writtens are too tough.

The idea is something like a recreational area (which is what amateur
radio really is, primarily) setting up separate paths for pedestrians,
cyclists and motor vehicles. Or camping areas having separate sections
dedicated to backpacking, horses and RVs. What could be the problem
with that?
>

Perhaps, but still suppostion on your part as wel. Nixon's actions are no
guarantee of what Bush would do.

your scenario is based on a
>hypothetical that has never existed, and further ascribes what the Democrats
>would do to Republicans.

Current Republicans have kept the country tied up for years on Whitewater and
months investigating oral sex. I'd find it real unlikely they'd drop the
presidential election so easily.

The SAD thing of this whole mess is that between the diverse and archaic voting
methods and the partisan politicians that are attempting to end things so
quickly, we'll likely never know who really won the election. We might just as
well have held it in the Balkans.

Vote in 2004 ? Who cares ? Your vote doesn't count if it's a close race anyway.

Given that something on the order of 1 in 30 men are homosexual, the odds are you already have. Being the father of a son myself I fully understand your emotion but I might suggest arming him with something more potent or at least heavier than a King James Bible. Like a bit of knowledge for example. Admittedly, in my case my son and I had to do the research together; made necessary by a Church League basketball coach at about the age he became a Scout.

With all due respect, sir, as the husband of a parochial school teacher I am also well aware that most of the upper division grade school teachers maintain a box of what are commonly called sanitary napkins for use when a girl breathlessly announces she is bleeding to death. There are times and places for Scripture; there are also times and places for parents to act the part. The rates for childhood sexual abuse are not a lot different for girls and boys.

Is it true what I am hearing? That he takes a $2.00 adapter and puts a rubber sleeve on it and sells it for $11.95! Does make the rubber sleeve worth $10?

Just wondering.

> is that way?

It's a property of the font, which a program has access to. For example, some of the outputs in EZNEC, like the tabular far field output, require a fixed font to be displayed properly. So when you open the "Set Font" dialog in this window, the program gives you only the fixed width fonts on your system to choose from. The property is surely embedded in the font file in some manner.

: to place them. There wouldn't be enough square miles of land in the United
: States to provide landing areas for all the black helicopter sightings !
: Screams of "The Socialists are Taking Over" would echo from NY to LA.

Nope, I don't buy it. Katherine Harris acted appropriately as
Sec'y of State of Florida. Carville would have happily obeyed
the law if it benefited Clinton, but the attacks which were made
on Ms. Harris would have been spun as "the vilest personal
attacks, typical of the Republicans when they don't get their
way." Somehow, the NYTimes having an editorial putting down
Ms. Harris for her fashion sense was never picked up by the
media as a personal attack. Odd, huh?

Second, I REALLY doubt Roger Clinton could ever get elected to
anything considering his rap sheet, but even stipulating that,
he would NEVER recuse himself as Jeb Bush did. That's not the
Democrat way. Democrats interpret the will of the people, and
are never EVER wrong.

Third, your take on Ms. Harris' actions are as biased as is
humanly possible. She DELAYED the counting??? Do you lie to
yourself about EVERYTHING as much as you do about this topic?

There are LAWS in Florida. They say that recounts must be
completed within one week of the election. The only exceptions
allowed are due to natural disaster. Manual recounts are
allowable only when there is a breakdown of counting machines.
Democrats reinterpreted this as meaning that she had discretion
to allow an extension for ANY reason, and that a bad ballot
rate of 2% was proof of machine error. Bullshit.

And finally, if those uncounted votes are so damned important,
why not count ALL the "uncounted" votes in ALL of Florida.
Not JUST the three heaviest Democrat counties?? Sure sounds
like vote manufacturing to me.

You Democrats are such hypocritical bastards. Not only do
you demand that the rules be changed after the election, and

in such a way as to benefit yourselves, but you come up with some smug, stupid slogan about making "every vote count", but not NOW. Just the counties that will get your candidate elected. That's anarchy.

We've had eight years of Democrats breaking rules and getting away with it. Most of the states, and most of the counties have voted for Bush. We have a representative democracy. That means that sometimes a lot of smaller states can have a stronger voice than one or two larger states. Gore lost. He even conceded once. Unfortunately, retaining power is more important to him than the wellbeing of this nation. The same is true of Carville, Clinton, and most of the leadership of the Democrat party.

Bush won. Get over it.

C'mon Jim, CW equal to all other (and future) digital modes combined?

Would this be a worldwide allocation or could the Canadians use phone
anywhere they want?

I think I am beginning to see some posturing in response to the ARRL
request.

I can't look at his web site if he does not provide it (I have neither of the indicated magazine issues where it was supposed to have appeared). If you say its good stuff then I happily admit my guilt, but it certainly had "scam" written all over it (to my unaided eye).
A lot of junk finds its way here under "FA" and "FS" banners. Sight unseen, I can't imagine a rubber gasket, grommet, or whatever, being protective to any practical extent. The sound of it was reminiscent of those recent cellphone foam "rf protector" and the foil "range booster" items.

Admittedly, I suspect the whole SMA deal to be something of a calculated plot to sell all brands/types of those blasted adapters. Bet there aren't many folks who don't slap a BNC connector on there immediately - If for no other reason than to speed up connect/disconnect.

I accept your testimonials to him if you accept my public apology for being skeptical.

Thanks Ran. Interesting story. The democrat was not exactly denied the same privilege. In this story , his request had to do with petitions to get on the ballot as a candidate for local office. He did get on the ballot even though a fair percentage of the petition signatures were thrown out.Some were duplicates,some weren't registered voters,and some were missing information like addresses. He was charged a fee though. I am a little confused on that. If you can't get the signatures you can buy your way onto the ballot? I could see how he may have a refund coming to him. BTW he lost. I haven't heard much from the Gore camp on this one. I guess it would tend to conflict with their position that every vote must count if they supported disenferanchising 15,000 voters who did nothing wrong. If the election official violated Florida law then he should be punished. It would not be right to throw out absentee ballots (from people who voted for both parties BTW) who did nothing wrong. The ballots were confirmed to be signed(signatures verified), dated, and from registered voters.

It is a lousy day for America when issues relating to sexual orientation are forced upon children. The gay community has a right to be gay, The Scouts have a right to be whatever they want too.

I think the original guy who forced this issue ought to be ashamed of himself for making this issue even come up on the radar scope of an organization that deals with minors.

I am not anti-gay. I am very pro letting kids be kids. To me the situation shows that whether gay or straight, this guy cares about himself before children.

> BillN6VLR

This lawsuit will go nowhere, it is but one of many desperate attempts to
change the outcome of the election. Remember, the ballots themselves were
never touched, it was only the application for an absentee ballot- which was

sent out with a birth date instead of a voter registration number, due to a computer error. The Registrar's office corrected some of the applications by matching the applications up with the computer records and adding the voter registration number. According to several different Registrars in other areas of the state, as well as in other states, this is not in itself an unusual practice.

The key point here is that there is no legal requirement for this information to be on the application, it is information that is used by the Registrar to make their processing easier -but a ballot request without this information is still a valid application, and the resulting ballot - which was in no way tampered with - is still a legally cast vote.

Legally, whether or not the information added would determine if the ballot was granted is moot. And further, the proposed remedy (disqualifying all of the absentee ballots) is both severe in the extreme and disproportionate to the significance of the clerical actions in question. Further, the remedy would arbitrarily and ultimately punish the voters - who are blameless in this action - rather than the Registrar who initiated the action.

I have tuned antennas for quite a while, but have never tuned a dual band.
I have my 2m down to 1.2:1 but my 70cm is 1.7:1. When I get my 70cm down,
then my 2m goes through the roof.
What am I doing wrong.
The antenna is mounted on the trunk lip, NMO mount, has a base coil and a
load half way up the whip.

I doubt it.

> Why -did- Bush file the first one? Why did
> he NOT want a hand recount?

Why would the winner of an election want a recount? Gore was the one who wanted the recount. And if he was truly concerned about the "will of the people," he would have asked for a recount state-wide. But, of course, we all know that he is really interested only in the "will of the people" who voted for him, which is why he only asked for recounts in areas that voted heavily for him (hoping to find more votes).

: I doubt it.

You're probably right.

: > Why -did- Bush file the first one? Why did he NOT want a hand recount?

: Why would the winner of an election want a recount? Gore was the one
: who wanted the recount.

(To really make sure he had a real victory once he heard Gore was going
to do it? (i.e. by more than ~1300 votes first annnounced.)

But perhaps a clarification will help; "Why did Bush not want Gore to have a
hand recount?" (the lawsuit portion of the question). The answer is
obvious.....

; And if he was truly concerned about the "will
: of the people," he would have asked for a recount state-wide. But, of
: course, we all know that he is really interested only in the "will of
: the people" who voted for him, which is why he only asked for recounts
: in areas that voted heavily for him (hoping to find more votes).

(to continue what I was saying) because "we all know that he (Bush) is
really interested only in the 'will of the people' who voted for him".

It seems that -both- candidates have the *same* objective. Yet only one
is lilly pure. :)

Are you guys sure that you aren't still mad at that other Governor who
was going to get Washington to stop bickering because he was an outsider?
Even though we have the lowest unemployment in years, a big surplus etc.

No need to worry about a 1.7:1 on a mobile. SWR means nothing until it
causes the transmitter to cut back on your power.

SWR seems to be a holy grail, a properly resonated 1/4 antenna on 70cm will
have an impedance of 25 ohms causing a 2:1 SWR. Coax losses etc will cause
the transmitter to see something less.
What you are seeing is normal.

Again, you're talking about two different things. Both Republicans and Democrats were asked to correct missing information on absentee ballot applications by the election supervisor. The Republicans were able to make changes without any problem. However, the Democrats were not able to correct that info when they came by the first time (the computer was down). But they were able to fix the info during a later visit that afternoon (and the ballots submitted by both parties were accepted by the clerk).

In the story you quote, Dean Ray, a candidate for commissioner, was not able to fix missing info on a signature petition because it had already been submitted. However, this petition was only required to avoid the application fee - it had nothing to do with election votes.

Horse hockey

First the fagots wanted acceptance, once accepted they wanted recognition, once recognized they wanted to be considered normal, once normalized they wanted special rights, once granted normalcy, they wanted our children... We on the other hand allowed ourselves to be brainwashed into believing anything less was because we were homophobes or bigots or whatever. You just pushed it over the edge peter puffers, may you all die of AIDS and suffer to the maximum possible.

: According to CNN and the Fox News Service, the Democrats also requested to
: update some of their requests, but when they showed up with the people to
: conduct the updates, the registrar's office computer system was down.

Was that in a GOP or Bush county? Perhaps they will have to throw out
those votes in GOP (majority) counties? ;-))

: However, the Democrats returned at a later date and did in fact update many
: of their party's absentee ballot requests. Funny that the mainstream news
: media forgot to mention that fact.

I'm suprised that Bush's alert pit bulls didn't pick up the scent of this
and file a lawsuit. Maybe it didn't happen?

: Like I said before, this is a common practice,

"Common" or not, it's against Fla law.

: only recently "spun" into an imaginary issue for political gain....

Isn't the -whole- election for "political gain"?

:- this "issue" will go nowhere.

Yes yer worship, but there are two other judges hearing the cases, so
we'll see if it flies soon enough.

: They posted a copy of the law on CNN. Seems you must have missed it.
: It said someone besides the voter could fill out the application.

Yes, a *close* relative or guardian. But as you've pointed out, those GOP
counties -are- very inbreed.

: > It is illegal, Gore's people were smarter than that. That is why the cases
: > weren't dismissed right from the begining.

: The Democrats did exactly the same thing. Is it only illegal for Republicans?

Bush can file more lawsuits and have those votes thrown out if true. By
the way, did the alledged crime(s) take place in GOP or Democratic
counties? :)

: If it's not illegal for Democrats, is it illegal for Libertarians? Y'all
: sure got a strange state over there, Jim.

That's what happens when inbreed Republicans take over a state.

Genie

A man found a bottle and was dusting it off when a genie appeared. The genie said, "I will grant you only one wish, what will it be?" After thinking a moment the man said, "Well, I have plenty of money, a nice house and a wonderful family, but there is one thing I would like to have: a vacation. I know, I would like to go to Hawaii, but I don't like to fly, and boats make me sick. What I want you to do is to build a bridge from California to Hawaii so that any time I want to go there I can drive." The genie replied, "WOW, do you realize what a tremendous request that is? That is over a thousand miles and across probably the deepest part of the Pacific ocean. Can you comprehend how much steel and concrete that would take? That would be a tremendous undertaking. Are you sure there isn't something else you would like to wish?" The man thought for a minute and said, "Yes. Please explain hams to me. They are so boring, they repeat things, they never show any guts and they hide behind their mikes. How can anybody have a life like that? The genie replies
"Will that be 4 or 6 lanes."

Please visit my World Wide Web Site, you have never seen a page like it. You will see:

With the SWR listed your antenna is working well. The difference between 1:1 and 1.7:1 is imperceptible to both your transmitter and the receiving station. For some reason there is a prevailing mentality that SWR must be 1:1 for proper operation. The reality is that SWR just isn't that important when compared to other performance parameters such as resonance and efficiency.

According to CNN and the Fox News Service, the Democrats also requested to update some of their requests, but when they showed up with the people to conduct the updates, the registrar's office computer system was down. However, the Democrats returned at a later date and did in fact update many of their party's absentee ballot requests. Funny that the mainstream news media forgot to mention that fact.

Like I said before, this is a common practice, only recently "spun" into an imaginary issue for political gain - this "issue" will go nowhere.

Of course, N8WWM is resorting to name calling and insult tossing.
These tactics sound like Al Gore tactics. Doug couldn't hold a
decent conversation on simplex, much less a 2 meter repeater.
The control op must turn off the system when he hears his call!

Remember, the judge has reason to hate Jeb Bush and the Republican Party.
If the Florida Supreme Court can overthrow legislative voting law, why can't
this judge do the same?

They posted a copy of the law on CNN. Seems you must have missed it.
It said someone besides the voter could fill out the application.

> It is illegal, Gore's people were smarter than that. That is why the cases

The Democrats did exactly the same thing. Is it only illegal for Republicans?
If it's not illegal for Democrats, is it illegal for Libertarians? Y'all
sure got a strange state over there, Jim.

But this post and your others are on misc. You can check it out.
>
>> No, it's not like the others. You don't see anyone encoding or
>decoding
>> RTTY by themselves. Morse operation is VERY different.
>
>But they could if they worked HARD enough at it.

I could understand some 60 wpm Baudot RTTY back in the day. If it were a
license requirement, I'd learn it.
>
>Don't forget that the original Morse was machine copied.

No, it wasn't. As Jeff has pointed out.

The wiggly line on paper machines died out quickly - a half century before
radio. Even today, those "Morse reader" devices aren't as good as a decent
operator unless the signal is strong and there's no QRM.
>
>> The idea is to change the status quo so that only those who want to

>regardless of any test. Those that want to keyboard it need not learn
>it and need not test for it. That makes the most sense.

Makes no sense at all. Shall we gut what's left of the writtens, using the same
argument? Let's see..."those who want to build gear will have to learn theory
anyway, regardless of any test. Those that want to buy gear need not learn it

and need not be tested for it." Same for band edges, most of the regs,
operating practices, etc. Is that what you want?
>
>> > I like convention and gentleman's agreements;

>> and there's no waiting period, age requirement or quota for any
>> license. Heck, the OLD tests have been passed by third graders.
>
>If you want to operate cw, then find some quiet space in the lower part
>of the band and go for it.

That's what I do - often. Doesn't stop the foreign 'phones and digital boys,
though.
>

>> Next thing you'll tell us is that the writtens are too tough.
>
>They're insane.

Agreed - they're insanely easy. Pass a 35 question multiple guess exam from a published pool that is mostly regs, and you can buy/design/build/adjust/modify/repair and operate a 1.5 kW output rig on any amateur band or mode above 50 MHz. Five-year-olds have done it.

> You have no choice but to memorize the q/a's.

That's absolute bull.

Every coupla months I take a practice exam at one of the websites that offers a simulated exam. Just to see if I'm still up to snuff. Never get below a 90 - without memorizing the Q&A, or even studying it. Piece of cake.

> Make
>them reasonable and hams are more likely to actually learn something
>from the experience.

Who gets to determine what's reasonable? I say the old 1970s tests were reasonable.

>> The idea is something like a recreational area (which is what amateur
>> radio really is, primarily) setting up separate paths for pedestrians,
>> cyclists and motor vehicles. Or camping areas having separate sections
>> dedicated to backpacking, horses and RVs. What could be the problem
>> with that?
>
>Start your cw on the low end of the band, let CB Dick start his
>amplified microphone on the high end, and as the band gets crowded we'll
>meet in the middle. Let that middle float depending on how many are
>operating each mode on that day at that time.

That's a gentleman's agreement. If it worked, that would be fine. It doesn't work. Waddya do when somebody decides to violate it?

And you haven't answered the question - what's the problem with setting up preserves for the different activities, just like the national parks do?
>
>> > Don't worry - its already a sure thing without any schemes to keep a
>> > Morse test by hardwiring the bands with CW.
>>
>> Are you positive it's a sure thing? Each country only gets one vote.

Source record: 98602

Still looking for the 'perfect' trade on this! Thanks to all who have made offers! I am still considering them!!

Greetings! Up for grabs is an immaculate (I mean TRULY immaculate) Kenwood TS-850SAT. This one didn't look any better when it came out of the box from the factory! I cannot find a scratch, fault, or blemish anywhere on this rig! If you are a Kenwood fan, you already know the features of this competition class, world renowned transceiver! And this one is LOADED with the YK-88C-1 filter, the YG-455C-1 CW Crystal Filter, the VRU-2 Digital Voice Recorder unit, the VS-2 Voice Synthesizer Unit, and the Kenwood IF-232C Computer Interface with all cabling! Also includes the original stock microphone and box in MINT condition! Only thing that shows any wear on this outfit is the manual, and it's not in bad shape at all...schematics included. If you can find a cleaner TS-850SAT out there anywhere, I'll eat my shorts, Hi Hi!!! I would prefer someone within driving/meeting distance on this one, so you can appreciate the true beauty of this one! For those of you not familiar, the Kenwood TS-850SAT is called by many one of the best HF rigs ever manufactured! It CERTAINLY has one of the best receivers of any rig! Includes 160-10 meters (WARC included) with general coverage receiver. Features a great automatic antenna tuner, dual VFO's, dual NB, slope tuning, adjustable AGC, memory 'channels', I could go on and on...look at the product reviews section on www.eham.net for further comments on this great rig! I am really looking to trade this rig...would like at least a KW amplifier with a lower-end rig...something along the lines of an SB-220 in excellent condition with an older rig would suffice. I'll listen to any and all offers. Don't be afraid to bounce an idea off of me! I would also prefer that the deal be completed in person. Anyone in the Chicago or Rockford, IL area interested? How about the Madison or Milwaukee, WI area? E-mail me with any and all offers! Sorry for the length of this post! I don't usually get this wordy but this one's a true beauty! 73 es gud dx de N9LXX~~~ R. Blaine Fox Beloit, WI

2255. Piss Off KC8JBO!!!

Here is a FUN little thing you can do to REALLY PISS OFF KC8JBO, hohohohoho!!!!! I should know, I have done it a LOT & he seems to get DRIVEN NUTS every time I do it!!

Follow these easy step by step rules:

1. Find a company that will ship COD via UPS.

2. Have them ship the item COD to:

Roger Wiseman (KC8JBO)
610 Glen Haven Ave.
Glendale, WV 26038

3. If you are PARANOID, place the call thru a PAY PHONE.....Find a company with a 1-800 number & it will not cost you a cent, hohohoho!!!!!!

Here are a few ideas on what to ship to the MONKEY BOY.......

Radio stuff...AES will NOT ship to him any more because I have done it so many times.

Electronic stuff...Watches, rings, auto parts, MAGAZINE ORDERS (hohoho), knife sets, etc. etc.

SEND HIM ANYTHING YOU CAN FIND THAT THEY WILL SHIP COD WITH UPS!!!!

Again, here is the 'Ole CANCER RIDDEN goats sons address:

Roger Wiseman
610 Glen Haven Ave.
Glendale, WV 26038

If you are lucky, you might find a business that will ship his mother a PINE BOX that KC8JBO can throw her in after her CANCER does her in, hohohoho!!!!!!!!

The ONE & only,

'BULL

Exactly. All I have to do is refuse it, say I didn't order it. It's no big thing, but I guess child molesters like "Pitbull," really don't have much intelligence.

2265. Maxwell Help Needed

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-02 00:00:00 UTC

To: e-layer@egroups.com
Subject: [E-Layer] I Really Need Help

A year ago I helped F. DeAquino Design the SysG experiment at his university in Brazil. It was successful Jan 2000 and posted on the Los Alamos bulletin board.

See:
http://jnaudin.free.fr./systemg/html/gravelf.htm

http://jnaudin.free.fr./systemg/index.html

http://www.elo.com.br/~deaquino/

I have been trying to design an ELF antenna to radiate sufficient power density for an application I am working with. Currently I am struggling with two issues. Maxwell's equation for antenna element wave propagation not in free space (i.e. conductivity > 0 and relativity permeability > 1) gives an imaginary value (square root of -1) for a surrounding medium of diamagnetic Bismuth with permeability of ~-2. How is this interpreted? In addition, an uninsulated copper element surrounded by high conductivity mu metel (78% Ni and remainder mostly Fe) says displacement current is negligible. With no displacement current can the element still radiate assuming signal attenuation due to conduction is excessive? Does the antenna need to be match? If so then at one milliHz (yes, 0.001HZ) a gyrator circuit can emulate a billion Farad capacitor to cancel reactance.

Best Regards-
Steve Burns

```
What is it?
-----------

E-Layer is an unmoderated mailing list, informally dubbed "The
University of Propagation", focused on the study and discussion of
HF Amateur Radio propagation and related geo-solar topics.

What sort of traffic appears there?
-----------------------------------

The discussion list does not deal much with day-to-day events or
forecasts, but rather on the underlying concepts. Thus you will
see little of things like next weeks forecast which are well
covered by other means, but rather you will see theoretical and
practical discussion of propagation matters.

For some examples of the traffic, go to our public message archives at

http://www.egroups.com/list/e-layer/

Start by browsing through the "Prop 101" messages from Bob Brown.

What's your hard on with the CB group? I can come over here and
bother you, since I don't need a pocket protector to follow you
and make your life miserable. Just because I have embarrassed the
hell out of you, don't think I'm going to let you slink off into
the ham group without giving you a taste of your own medicine.

I won't send you any snail mail or email or telephone you, but
I will follow you around the NG's and make your pitiful existence
a nightmare. Of course, you can be a man and apologize to the masses...

What might prove beneficial for commercial communication$ might not
be needed nor even desired by amateurs. If we were to compare and
contrast commercial- and amateur-radio users, the differences would
be vast.

If they are it will be about the first thing they were able to do correctly
since crossing paths with Boies. Watching "Chairman Bill" nervously rocking
back and forth like a dimwit while having temporary Alzheimer's was hysterical.
Reading Microsoft's internal e-mails was another great laugher, combine that
with Microsoft's "Doctored" videos of Windows with and without IE and it was a
truly hilarious trial.

For two big reasons:

First, there is too much visibility in what is going on in the Florida courts now, which is a big reason why the FL Supreme court ruled against AlGore on his last two appeals.

Second, the proposed remedy is to discard all of the absentee ballots in that district. This remedy would:

1) Be viewed as too extreme in light of the significance and severity of the claim.

2) The remedy would arbitrarily and ultimately punish the voters - who are blameless in this action - rather than the representatives who committed the act.

Why are you afraid to post this the the amateur group as well as
RRCB? I knew you couldn't resist a chance to place an insulting
post to RRCB. Back to the name calling and insults. It's what you
do best. You should spend your time learning CW, since CB is evil.

I used to be able to read the holes in the tape (had to -the inker was
always inop). Anyway, some people can't.

> >Don't forget that the original Morse was machine copied.
>

I want to the government to require only what is necessary. You know
that.

Good. We need more non-angry, experienced operators.

Because you are talking all of HF, not just 20M. Regardless, I have an
authorization on 20M.

> And you haven't explained why 75 kHz isn't enough room for the digital
> folks on 20.

I've explained that the subbands should slide back and forth depending
on instantaneous use.

> >I like 100 watts on 10M and hope to be
> >on 160 some day.
>
> So you've not used 20 at all, but you want your opinion on the band to
> be taken seriously.

I've not worked out of band Frenchmen on 6M either, but you have no
problem with that. I have an authorization on 20M, but even if I
didn't, as a citizen I must be vigilant in monitoring what my government
does. If you put forth such a suggestion the FCC, the ITU, the ARRL, or
the IARU, I will oppose it. Even if I didn't have a license.

> >The FCC has made the General class ham the equal of
> >all others on those bands.
>
> Ah - you flunked the new Extra written. Sorry.

Yes, it was embarassing. I passed the old one a couple of times and
didn't think this one would be a big deal. Ooops! I'll test here in
Ohio as soon as I can find a test session locally.

> And don't forget 30, 17 and 12 meters.

Right-O. We'll put the voice portion of 30 on the upper half ;)

> It will be interesting to see what happens when the sunspots dive.

I expect a general move into the lower bands, more congestion, more
angry old men.

> boys, though.

Your filters should. Rotate your antenna and null them out. Or suggest
to the IARU that we all go QRP (except the IT's) or at least scale us
back to 100W.

> >> Next thing you'll tell us is that the writtens are too tough.

I really enjoyed the the 73 magazine article on converting an old Amana Radar Range oven into and 1200 watt SHF transmitter. New and old Techs were 100% authorized to do so.

> > You have no choice but to memorize the q/a's.
>
> That's absolute bull.

Is not. Go get a university catalog that has an electrical/electronics engineering department. Then examine each Tech question in the pool and pigeon hole each one into a particular course offering.

Then tell me that someone is going to go about learning all of that on their own???

You have no choice but to memorize the q/a's.

> Every coupla months I take a practice exam at one of the websites that
offers a
> simulated exam. Just to see if I'm still up to snuff. Never get below
a 90 -
> without memorizing the Q&A, or even studying it. Piece of cake.

But you are experienced. Start with an empty vessel and look at the intro Tech exam. Completely Insane.

> > Make

> doesn't work. Waddya do when somebody decides to violate it?

Assuming you tried to get their attention already? Switch to a
different mode. Slide up or down the band. Switch to a different band.
Or start a fight.

Under your plan, if you're operating CW you can't just switch to
another digital mode because you went and hardwired it for CW only.

> And you haven't answered the question - what's the problem with
setting up
> preserves for the different activities, just like the national parks
do?

Because the Sierra Club thinks that every breath that I take takes a
breath away from an endangered field mice. They are getting the USFS
and the Park Service to deny my access to the National Parks.

You would do that with spectrum that I currently have mode options with.

> >> > Don't worry - its already a sure thing without any schemes to
keep a

A little research before you speak will do you well. The registrar's office added the voter ID to the applications, and nothing else. They didn't "fill in the blanks" as you stated because 1) there was no blank printed on the application for this information to be "filled in", and 2) "blanks" is plural, the registrar only added a single piece of information.

FYI, Florida absentee ballot requests have no legal requirement to have the voter ID on them. It is done in many districts, for both Republican and Democrat requests, as an aid to the processing of the requests by the registrar's office. With or without a voter ID on the request form, the resulting ballot cast is a legal vote.

Looks like AlGore and you should heed you moniker and "23skidoo" pretty quick...

> > in 30 men are homosexual, [snip]
>
> Interesting statistic, where is this documented ?

Its not "documented" anywhere. These are made up, exaggerated, numbers used by homosexuals in an attempt to convince people that homosexuality is commonplace.

In reality, homosexuals probably number far less than one percent of population - a amount that would be much less if we could keep existing homosexuals from raping little boys, which screws up these boys' heads so much they eventually think they are homosexual (at which point they often repeat the child rape cycle).

And one way to prevent homosexuals from raping little boys is to keep them away from little boys, which means keeping them away from groups like the Boy Scouts of America.

After all, if not for a desire to have easy access to little boys, why else would homosexuals be fighting so hard to be admitted as leaders in the BSA?

We should eliminate the vote unless you're a fat, white male.

>I think it would be beneficial in some aspects to be a Democrat. Heck, if I
>register as a Democrat that means that after I die, I can rise from the
>grave every couple of years and go forth and vote two or three times!

Also typical of the Democrats it's FREE. If you're a Republican, there's a FEE
for rising from the grave, you have to send in 10% of your Pre-Tax Income to
Pat Robertson and the 700 Club.

>It seems the Democrats have placed a whole new meaning on what it is to be
>"resurrected"!

See above about the 10% Republican Co-Pay !!

>Does that also mean that I can get some free cigarettes, too?

Probably not a good idea, that would be ANOTHER reason for your Republican run
HMO to deny benefits to you.

>I wonder what Rosie O'Donnell and Babs would have to say about this
>miraculous phenomenon?

"I am not a Crook" ?

>I rest my case, the Republicans would do the moral thing.

They have a monopoly on such matters ?

Your folks on the
>other hand think that oral sex doesn't count, and neither do marriage vows.

"My folks" like Newt Gingrich (who was boppin' a staff member all the while)
and several /potential/ Speakers of the House ?

I'm an independant but somehow /prosecuting/ someone for /legal/ sexual
activities seems rather odd.

>Democrats have no problems killing a baby as it leaves the birth canal,

Republicans prefer to wait a while, then make a big public spectacle (a Roast
if you will) at the electric chair / gas chamber / lethal injection.

BTW: I see now that we're past the offical election day that Texas has got some
MORE executions on the way. Funny how they stopped for quite a while before the
election. Just a scheduling "thing" I'm sure.

why
>should stealing an election seem any less moral?

If the courts rule against the Rep's it's called "Stealing the Election" if
they rule for the Rep's it's "Rule Of Law", funny how that works.

Everything costs more. And the deficits of previous administrations don't go away by themselves. Check out what the national debt was in 1980 - then see what Reagan and Bush did to it in the '80s.

> a crashing stock market,

After the longest expansion in history. And the decline is being mainly caused by the failure of the dotcoms and other puffballs.

>a declining military,

How many nukes do we need? Who are the bad guys? The Soviet Union is no more, and the Red Chinese have McDonald's in the Forbidden City.

> soaring energy prices,

"soaring"? Hardly. Gasoline isn't even $2 a gallon yet. Adjusted for inflation, it's CHEAPER than before the energy crises of the 1970s.

Energy production is up - but energy efficiency isn't fashionable in America, so demand is up, too. And ol' Papa Bush stopped Stormin' Norman from finishing the job in Iraq back in '91, so Saddam is still in the catbird seat.

Anybody who knows math understands the real election problem. The processes used for voting in Florida have a margin of error that is greater than the margin of victory claimed. But nobody wants to admit to a faulty process, because that would mean it needed to be changed.

One thing about them is that they were applications, not ballots as the media has been lying about. The law allows a representative to fill out those applications. The Republicans who corrected the applications were just being good representatives. Poll the applicants and see if they have any objections.

Just as Bush had the opportunity to request hand counts and didn't, so did Gore have the opportunity to assist Democratic voters on those voting applications and didn't.

So you say.

> In reality, homosexuals probably number far less than one percent of
> population

Oops. If "It's not documented anywhere," that statement is no less a
"made up, exaggerated number" than the one you're whining about.

> - a amount that would be much less if we could keep existing
> homosexuals from raping little boys,

If "it's not documented anywhere," what is your basis for that broad
reaching claim?

> which screws up these boys' heads so much they eventually think they
> are homosexual

If "it's not documented anywhere," how do you reach that conclusion that
isn't supported by any scientific evidence known?

> (at which point they often repeat the child rape cycle).

If "it's not documented anywhere," where can we find the statistics that
reflect this wild claim?

> And one way to prevent homosexuals from raping little boys is to
> keep them away from little boys, which means keeping them away from
> groups like the Boy Scouts of America.

How about keeping them away from groups like the Catholic church, the
Baptist church, the Pentecostal church, the Methodist church, the
Episcopalean church, the Presbyterian church,...?

> After all, if not for a desire to have easy access to little boys,
> why else would homosexuals be fighting so hard to be admitted as
> leaders in the BSA?

How about, sexual orientation notwithstanding, the same desire to help
promote the positive programs for youth that heterosexuals have?

What wild speculation that is. And if you think the Jeb Bush's hands
aren't in this whole operation behind the scenes, you are truly naive.

> Manual recounts are allowable only when there is a breakdown of
> counting machines.

Cite the statute. To save time, I will tell you that you are wrong.
Florida Statutes, Title IX Chapter 102.166(4)(a) and (4)(c)
I'll even make it easier for you:

http://www.leg.state.fl.us/Statutes/index.cfm?mode=View%20Statutes&SubMe
nu=1&App_mode=Display_Statute&Search_String=&URL=CH0102/SEC166.HTM

but you'll have to cut and paste.

> Bullshit.

Exactly right.

> And finally, if those uncounted votes are so damned important,
> why not count ALL the "uncounted" votes in ALL of Florida.

I'm for that. Let's do it.

> Not JUST the three heaviest Democrat counties?? Sure sounds
> like vote manufacturing to me.

Too bad. Check the statute. It's up to a candidate (or voter) to request
the recount in any particular county. Whichever ones they choose is not
up to you. Moreover, the statute specifically states that the appellant
gets to pick any 3 precincts in the county.

> You Democrats are such hypocritical bastards. Not only do
> you demand that the rules be changed after the election, and
> in such a way as to benefit yourselves, but you come up with
> some smug, stupid slogan about making "every vote count", but
> not NOW. Just the counties that will get your candidate
> elected. That's anarchy.

I suppose this would be an appropriate time to point out that "you
republicans can't read the statutes," but that is so unfair to the
republicans I know who are smart enough to and who don't try to make
their point by spinning misinformation wildly without any sense of
responsibility at all. And I thought personal responsibility was one of

the precepts republicans are constantly blathering about.

> We've had eight years of Democrats breaking rules and getting
> away with it.

Economy's up, taxes are down, deficit is down, unemployment is down,
interest rates are down,... yeah, you've had a tough 8 years.

> Most of the states, and most of the counties have voted for Bush.

Most of the people have voted for Gore.

> We have a representative democracy.

Actually, no, but since you aren't very well informed on Florida
election law, further civics lessons are pointless.

> ...and most of the leadership of the Democrat party.

Wild supposition with such a broad brush renders any relevant thought
you might have had to be suspect at best.

> Bush won. Get over it.

We'll see. I can't wait to find out if you'll follow your own advice.

> No, it's not like the others. You don't see anyone encoding or
decoding
> RTTY by themselves. Morse operation is VERY different.

But they could if they worked HARD enough at it. If only they had the
desire, the intellect, and the time.

> > That some wish to make
> > and break contacts manually sending imperfect code is their option.
>
> Hah! That's a good one.

Don't forget that the original Morse was machine copied.

> The idea is to change the status quo so that only those who want to
use
> Morse need pass a test. It's a compromise.

Those who want to manually make and break contacts will have to learn it
regardless of any test. Those that want to keyboard it need not learn
it and need not test for it. That makes the most sense.

> > I like convention and gentleman's agreements;
>
> I do too - but they aren't working like they used to.

Too many angry old men involved.

> > not an iron fist,
>
> In other words, you want to run high power SSB on 14003, and if
anybody
> doesn't like it, tough.

I have no desire to get on 20. I like 100 watts on 10M and hope to be
on 160 some day. The FCC has made the General class ham the equal of
all others on those bands.

> > not a
> > scheme to set up some exclusive club.
>
> What "exclusive club"? The US code tests have been reduced to 5 wpm,
> the written tests are down to 3 multiple-guess published-Q&A things,
> and there's no waiting period, age requirement or quota for any
> license. Heck, the OLD tests have been passed by third graders.

If you want to operate cw, then find some quiet space in the lower part
of the band and go for it.

> Next thing you'll tell us is that the writtens are too tough.

They're insane. You have no choice but to memorize the q/a's. Make
them reasonable and hams are more likely to actually learn something
from the experience.

> The idea is something like a recreational area (which is what amateur
> radio really is, primarily) setting up separate paths for pedestrians,
> cyclists and motor vehicles. Or camping areas having separate sections
> dedicated to backpacking, horses and RVs. What could be the problem
> with that?

Start your cw on the low end of the band, let CB Dick start his
amplified microphone on the high end, and as the band gets crowded we'll
meet in the middle. Let that middle float depending on how many are
operating each mode on that day at that time.

> > Don't worry - its already a sure thing without any schemes to keep a
> > Morse test by hardwiring the bands with CW.
>
> Are you positive it's a sure thing? Each country only gets one vote.

Jersey doesn't get a vote, nor does minami torishimo. The ARRL says
they're countries.

> Nope. But that's a good idea.

I'll support mode testing. Not just ONE mode mode testing.

That page came up blank. Unless they've changed the law recently, felons in Florida can't vote anyway.

http://biz.yahoo.com/law/001024/97233-7.html

Florida is the natural target for advocates of the felon franchise. It is one of 11 states that generally disenfranchise all felons for life. (Most states disenfranchise probationers or parolees, and nearly all disenfranchise inmates.) Florida is the biggest of the strict states; it also has the biggest prison alumni group. Fully 525,000 Floridians who have completed their sentences and supervision cannot legally vote.

2319. Republicans FINALLY stand up!

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-02 05:12:48 UTC
From: Anonymous <anonymous@anonymous.anonymous>
Message-ID: <3a288490_2@anonymous>
Source record: 98660

I am glad to finally see the Republicans standing up for what is right! They have been taken advantage of, lied to, and have generally just stood back while the Dems. run rampant, lie, cheat, and toss around epithets such as "racist". "mean-spirited", etc.
When a Democrat gets a convicted felon to vote, it is called voter outreach. When a Republican exposes such illegalities, it is called mean and racist. The Dems. cry that the vote counters were intimidated by no more than 15 protestors at the door of their chambers. Hey...what has been made of "Rent-A-Riot" Jesse Jackson bussing in paid protestors? Who whined about Democrats giving out cigarettes for votes? What was said of the Gore demonstrator that struck a 13 yr. old boy in the stomach?
I love it! Dems are getting a dose of their own medicine and they can't stand it!

Enjoy your freedoms. Liberals would remove them if they could. Thank a veteran, NOT a Liberal.
Plubius
The truth is the truth...and they can't stand it!

If Dubya gets in, he will "bolster the military" by awarding multibillion dollar contracts to his big business sleepmates and will continue to screw the personnel - To republicans, if you don't command big money you are merely one of the "little people". Stop being sheep. Dubya wants the election over so that his brother's handiwork isn't even more exposed than it already has been - What about all of the GOP ballot requests that were invalid until the republicans "filled in the blanks"? Don't want to talk about that, do you ?? Just want to make sure the "mouthy minority" gets it's way.

Brian <brianburke@my-deja.com> wrote:
>Don't forget that the original Morse was machine copied.

But was quickly abandoned when it was realized that it was faster
to copy by ear.

That "machine" only drew zig-zag lines on a paper strip. The process
of transcribing the zig-zags to letters of the alphabet, then tran-
scribing again into a type-written message for the recipient consider-
ably hindered efficient communication.

Within five years, no operator was hired unless he could copy by ear.
The slow pencil/paper/solenoid "machines" were permanently retired.

The direct transcription from to ear to typewriter set the standard
for all formal Morse communications for the next 150 years. (Non-formal
messages (no typewritten copy necessary) were copied completely in
one's head at rates up to 70 wpm, many times while the operator also
carried on a conversation with someone in the office! It's amazing
what our minds are capable of doing, eh?)

Let's not forget about the telegraph inventions prior to Morse's --
many were audible in nature. See Harlow's "Old Wires and New Waves, a
History of the Telegraph, Telephone, and Wireless" (1936).

Heck...it seems that 75 percent of all Democrats are either illegal aliens, convicted criminals, or illiterates who want something for nothing.
I think it would be beneficial in some aspects to be a Democrat. Heck, if I register as a Democrat that means that after I die, I can rise from the grave every couple of years and go forth and vote two or three times!
It seems the Democrats have placed a whole new meaning on what it is to be "resurrected"!
Does that also mean that I can get some free cigarettes, too?
I wonder what Rosie O'Donnell and Babs would have to say about this miraculous phenomenon?

You take this avocation *far* too seriously if you expect the choice of who is president would be have any effect at all on a trivial hobby in which only a fraction of one percent of the citizens participate.

There are more old ladies involved in the hobby of knitting booties for grand-babies than there are people involved in ham radio. Which president would be the best choice for bootie knitters? Who cares?

Ask me something about amateur radio.

Dave,

You could use a 440 HT to MONITOR the FRS channels. Here is a URL to the frequencies.

http://members.tripod.com/~jwilkers/frsfreqs.html

My HT will not tune in 2.5 Khz steps so I can not tune to the exact frequency. I can only get within 2.5 Khz but this should be OK for monitoring. As to the legalities of using any other type radio on FRS frequencies ----- Equipment used in the FRS service must be Type Accepted, meaning only FRS equipment may be used on FRS frequencies.

Why not get a pair of FRS radios. I recently bought a pair for my parents at K-Mart for $69, complete with NiCads an chargers. The same product was later on sale for $59. Good luck

That is the exact same story I heard in several news stories.
However, I was under the impression from one of those stories that the
clerk in the office asked each group to add the information.

Nobody mentioned W4AMP. The poster is using the Hennepin County Public
Library system in and around Minneapolis, MN to post. W4AMP lives in
GA, and it's doubtful he would post this anyway.

Bullshit. W4AMP and I have settled our differences. Assume all you
want, but you're just making an ASS out of yourself, which is nothing
new. The previous gutless anon poster changed the sig to W4AMP.

David received your money order just 9 days ago and you have already sent him several emails, posted a thread in this newsgroup, and created a web page, all calling him a crook. Man, even without seeing what was in all those email messages, I can certainly see why this David guy wrote back to you with a bad attitude. If you had done this to me, I'd be ready to kill you at this point.

I also find your comment about the post office highly suspect. Unless the regulations have recently changed, a person has 60-90 days to complete a transaction before the postal service will even consider an investigation of a complaint. Since it has only been 9 days, I doubt the postal service is even interested at this point (and they have certainly not flagged the money order, if they even have that capability).

It'll end when Judge N.Sanders Sauls orders ALL THOSE BALLOTS counted
which will then prove that Gore won. Can Bush govern under such a
blanket of deceit? Never.

Which is exactly the reason the court will not favor the lawsuit. The
complainants' suggested remedy is to disqualify all 15,000 absentee ballots,
although there are only 5,000 in question. This remedy can only be viewed as
flawed because it is overkill, and most importantly, it punishes the
voters - who are blameless - rather that the election officers who are
responsible for the action.

The entire political and social system currently depends on some
fragile requirements for its continued health. Namely moderately priced
energy sources, which are clearly not assured, for at least two reasons,
dependence on foreign oil, and on foreigh investments in America.
What happens if either comes into serious shortfall is not pleasant to
contemplate.

If Billy clinton is yo hero then A MURDERER is your hero, a draft dodgin' crack head is your hero, a Sodomite faggot is your hero, an UNconstitutional treasonous wimp is your hero....boy, what does that say about you? Billy doesn't have a CB--what do your sick thoughts have to do with CB?
Dave!!!!!!

Scott (Unit 69 Chesapeake Bay) wrote in message <3A295853.EE796FF8@hotmail.com>...
Still whining and trolling. Go ahead and call me some more names and fling some more insults. You're great entertainment. I know your peers are howling with laughter AT you now.

Ohio/Penn DX Bulletin No. 488

The Ohio/Penn DX PacketCluster
DX Bulletin No. 488
BID: $OPDX.488
December 4, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AA1AC, AI2Q, N2OO, WB2YQH/ WB2RAJ & The 59(9) DX Report, W3HC, W3UR & The Daily DX, K4QD, K4VUD, KD4EUH, W4DXX, W4ZYT, AI5P, K7BV, N7NG, AG8L, K8YSE, BA1DU, CE6TBN, DJ5AV & DX News Letter, DK9KX, DL7VYL, EA3BT, F5NOD, F6AJA & Les Nouvelles DX, JF1OCQ, JQ1SUO, JT1KAA, ON5FP, PY1NEZ, SQ4NR, VK4AAR, VK0MM, YS1RR, YT1AD and 9M2TO for the following DX information.

3D2, CONWAY REEF. Hrane, YT1AD, reports that their plans are firm for the upcoming DXpedition. The operation will take place February 18-27th in 2001. The operators will be YT1AD, YU1RL, YU1NR, YU7AV, YS1RR, Z32AU and Z32ZM. Activity will be on 160-6 meters as well as 2 meters. The modes to be used are: CW, SSB, RTTY, PSK and SSTV. The total costs of the DXpedition is 45000 USD. Any donation will be highly appreciated. More details will be forthcoming.

3DA0, SWAZILAND. Dan, W5AHC, is here currently installing a communications systems for church groups for an undetermined time. He has reportedly received the callsign 3DA0AA. So far no QSNs have been reported on any activity.

3Z, POLAND (Special Event). Look for special event station 3Z0KOR from Olsztyn to be active during the whole of December. The station is on the air to celebrate 25 years of Polish Reserve Officers' Club. If you work this station a special award is available. QSL via SP4KSY (bureau or direct). You can find additional information on this activity on the Web site: http://www.cqsp.republika.pl/3z0korenglish.htm

4S OPERATION WRAP-UP. Phil Whitchurch, G3SWH, informs OPDX that he had a rather disappointing operation from Sri Lanka. He reports, "The airline managed to lose my baggage containing the R-7000 antenna, the vibroplex, tools and headphones etc., not to mention all my clothes. I hand carried the IC-706, power supply, laptop etc. When the airline found and forwarded the bags, the Sri Lankan customs impounded the antenna, and all my other

equipment and refused to release it without documentation from the Sri Lankan Ministry of Defence. A copy of my Sri Lankan licence was not acceptable. I was very lucky to manage to negotiate the release of the equipment in time to load it aboard the homeward bound aircraft. I did manage a limited operation, mainly on 24 MHz CW and made 584 QSOs with 63 DXCC entities, but it was nowhere near the level of activity which I had planned..... 73 for now."

A4, OMAN. Murtadha, A41LZ, has been active around 14180 kHz (+/- 10 kHz) after 0330z. Chris, A45XR, was heard this past week on 28033 kHz around 1459z.

A5, BHUTAN (and XU, Combodia). By the time you read this, Charly/K4VUD and Yani/9M6US will be operating from Ham Center in Thimphu, Bhutan. They plan to run two stations. Charly will be operating from December 1-12th, signing A52UD on SSB/CW emphasizing the low bands. He was on this past weekend on/around 7048, 14260 and 28495 kHz. Jani will be using A52AP from December 1-7th, concentrating on SSB and RTTY on higher bands. He was heard this past weekend on 24936 kHz around 1145z. Jani will go to Cambodia (XU) from December 8-12th operating as XU7AAP including a participation in the ARRL 10m Contest. QSLs for A52UD go via K4VUD, while A52AP and XU7AAP go via N2OO.

BY/R1ANF. There has been some confusion on this station's activity. First this station is reportedly operating from the Chinese Antarctic Base "Great Wall" in the South Shetlands (King George Island), not China. The operator was Oleg, UA1PBA, visiting the Chinese base. This activity sparked a press release by Alan, BA1DU, stating "According to current radio regulation of China, it is impossible to issue such a BY/ callsign. The authorities never permit foreigners to operate amateur radio stations independently in China, and all holders of Chinese guest amateur radio operating license can only operate under a BY club callsign/guest's home call sign. Although there are no national boundaries in Antarctica, Chinese authorities never permit that callsign operation". QSL via RK1PWA: Nick Shapkin, P.O.Box 73, 164744 Amderma, Arkhangelskaja, Russia.

D6, COMOROS (Update to OPDX.486). Josep, EA3BT, sent out another short press release this past weekend requesting input from the DX community on what "bands and modes" he and his wife (Nuria/EA3WL) should be active on from Comoros. Their activity will be from January 13-28th. You can find information on their DXpedition and leave your input on what bands and modes they should operate on at: http://www.qsl.net/ea3bt

EP, IRAN (Update). Hamid, EP3HR, manager of the club station EP4PTT, reports that this station is now only working on 20 meters SSB. This is because their equipment is homemade and can only work on 20 meters, but they are planning to make a four band radio which will work on 40, 20, 15 and 10 meters. Unfortunately, a pirate station near their country of Iran and as been using the callsign EP4PTT asking for IRCs or green stamps. QSL information for EP4PTT is only via the bureau of Iran with this address: C/O Directorate of Telecommunications, Box 11365 - 931, Tehran, Iran.

ET, ETHIOPIA. Claudio, ET3VSC, was heard on 17/12 meters this past weekend. Activity was on 18076 kHz at 1958z and 24957 kHz beginning at 1300z.

FO/A & FO, AUSTRAL ISLANDS AND FRENCH POLYNESIA. Alain, F2HE, has left for the FO-lands via Los Angeles and hopes to be active on Rangiroa (OC-066) with his FO0CLA callsign. He will be there for at least 8 months and also hopes to be active from Rurutu (OC-050) in the Austral's, Mangareva (OC-063) in the Gambier Island group, and maybe from Pukapuka Atoll (OC-062). QSL via F6CTL.

FS, FRENCH ST. MARTIN. Just a reminder! Look for members from the North Jersey DX Association (NJDXA) to begin their activity December 5th (Refer to OPDX.482). The seven operators will be active until December 12th with two stations on the air on CW/SSB on all bands. They will be active during the ARRL 10M Contest as FS/W2JJ. Operators Mike/WA2VUN, Jay/WB2BHC, Gene/K2KJI, Maryann/K2RVH, Bob/W5GJ, Ann/W2AZK, and Brian/KF2HC will use their own individual callsigns outside of the contest. QSL via their home callsigns.

FT/W/X/Z, A NO GO. In OPDX.486 we mentioned that Andre, F6GQO, was going to travel on the vessel "Marion Dufresnes" and possibly be active from Crozet, Kerguelen and Amsterdam Islands. Unfortunatly, Andre, couldn't obtain the permission to be active.

IOTA NEWS.....
AF-050. The "LNDX" reports that Yannick F6FYD/5T5YD hopes to be active from Arguin Island soon, maybe during the coming week.

EU-038. Marc, ON5FP, and his YL Tine will make a short trip to Texel Island from December 28-30th. Marc informs OPDX that although this is primarily meant to be a relaxing trip, expect some activity from a nearby Texel lighthouse. Activity will most likely be on 20 and 40 meters, signing PA/ON5FP/P. QSL via his home callsign.

NA-079. Jan/K4QD and John/AF4WM will be active from the Dry Tortugas National Park for a few days starting about December 10th. The exact time of operation will depend upon weather because the team is sailing from North Florida. They will operate portable from Ft. Jefferson on Garden Key. QSL via CBA.

OC-NEW. Plans are well on the way for a trip to Breaksea Island by operators VK6YS/Wally (team coordinator), VK8AN/Dan, VK6CX/ Bruce, VK6KHD/Nigel and Jim, an interested party (not licenced), beginning January 18th or 19th through January 22nd or 23rd (2001), using the callsign VK6BSI. Alan, VK4AAR, reports that Breaksea Island is a Class "A" reserve and requires a special permit from the "Conservation and Land Management" (CALM) people in order to land and stay. Two of the operators are "survivors" of the ill-fated Browse Island expedition last September when their boat was driven up the beach by the sea. This island is in the "Western Australia State (South Coast)

West Group" and lies just south of Albany at 35 degrees
11.334 minutes South, and 118 degrees 03.703 minutes East.
It has never been activated before, and an IOTA Reference
Number will be allocated once operations are under way. QSL
via VK4AAR (direct only): Alan Roocroft, POB 421, Gatton 4343,
Australia. Alan states, "Remember, it is NOT a good idea to
send envelopes with Australian stamps as there is now a
special type of stamp for use on international mail. The
postal authorities assure me that using the wrong stamps WILL
incur a penalty. So please use Greenstamps (for preference)
or IRCs."

SA-024. A group of Brazilian operators will activate an island in the
Sao Paulo State West Group called Comprida Island. This island
is located near the city of Iguape, south coast of Sao Paulo
State (PY2). Operations will take place from December 13-18/19th.
This will be a full time operation, depending on propagation
conditions on 160-6 meters on CW/FM/SSB. Look for the following
callsigns/operators: PU1NEZ/2 (Carl), PY1LVF/2 (Zeca), PY1NEW/2
(Pete) and PY1NEZ/2 (Lima). QSL via their home callsigns
(addresses are correct in the QRZ Database/Buckmaster/Flying
Horse Callbook) or Bureau. Suggested frequencies are (+/- 10
kHz):
CW - 1835, 3530, 7030, 10115, 14040, 18098, 21040, 24895,
28040 and 50080 kHz.
SSB - 1850, 3755, 7055, 14190, 14260, 18128, 21260, 24950.
28360, 28460, 28560 and 50110.

JD1, OGASAWARA. Eiji, JQ1SUO, informs OPDX that he will be going to
Hahajima (AS-031) and will be active as JQ1SUO/JD1 from December 30th
through January 3rd (2001). Activity will be on 160-10 meters CW/SSB.

KH0, MARIANA ISLANDS. A group of JA operators will be active from December
8-11th on 40-10 meters SSB/CW, and possibly 6 meters. Look for the
callsigns W1VX/KH0, KZ5C/KH0 and KH0/JR1IBD from Saipan Island. QSL routes
are as follows: W1VX/KH0 via JF1OCQ, KZ5C/KH0 via JA0QBY and KH0/JR1IBD
via JR1IBD. Please do NOT send directly to the U.S. or the Bureau.

KP2/WP2, U.S. VIRGIN ISLAND. Dave, AG8L, will be active from the Windwood
contest station, WP2Z, from December 6-13th, including an entry in the
ARRL 10M Contest. The callsign KP2/AG8L will be used outside of the
contest. The station is located on the island of St. Croix in the U.S.
Virgin Islands. Dave states that there is no 6 meter activity possible,
but there may be some PSK-31 activity after the contest. QSL routes are:
KP2/AG8L via NN6C and WP2Z (contest callsign) via KU9C.

PY0F, FERNANDO DE NORONHA. Andre, PY0FF, has been very active on 6 meters
lately. Listen for him between 1330 and 1800z.

QSL INFO AND NEWS.....
JUST A REMINDER! If you are sending for stateside QSLs, the postal
rate will be going up "1 cent" in the beginning of the new year 2001.

Please be considerate and DO NOT stick the QSL Managers with the penny.

Tex, 9M2TO, reports that ALL the September and Ootober QSOS QSLs have been sent out to the JARL Bureau. Also, all the direct QSLs received for both JA0DMV and 9M2TO before November 18th have been replied to. He states that over the last 5 years he has made a total of 117,941 QSOs and has automatically sent to the QSL bureau 108,480 cards. He has also replied to 4,925 direct.

Several have asked what the address for 7M4PTE, QSL Manager for S21YH is. Well, here it is thanks to Eric/W4DXX: Kazunori Abe, 7-12, Kagura, Ashhikawa 070-8007, JAPAN

Mac, W3HC, reports that he is now the QSL Manager for BA2BI.

Rick, AI5P, reports that he is sorry to report that the CY9 QSL cards from the printers in Europe have not yet been received. The QSL cards for AI5P/CY9 were mailed from the Czech Republic October 6th, but have not yet been received in Arkansas. The other cards for KT1J/CY9, WA4RX/ CY9, and WV2B/CY9 are being printed in Bulgaria, and he has no status report on them. Please be patient and do not send second requests to any of the QSL managers. All will be confirmed in due course, and they are sorry for the extended delay.

Gerda, DL7VYL, informs OPDX that her husband Fritz, DL7VRO, QSL Manager for 7P8AA (and many others), states that he has been in the hospital. Fritz hopes to have the 7P8AA cards out by the end of December. ADDED NOTE: OPDX and the NODXA gang send out our best wishes and a get well quick for Fritz.

Jean Michel, F6AJA, reports that the FM/F2JD QSLs are not printed yet. However, if you are interested to see if you are in the log send an E-mail message to " log.f6kpo@eudil.fr " with the callsign as subject and "FM/F2JD" in the body message.

Gil, F5NOD, one of the FR/F6KDF/T Team, reports that they are currently working on the Tromelin Island QSLs. He states that the first QSLs will be sent out during the second part of this month (around 12000 QSLs).

JT1R Team. Operators were JT1BH, JT1BJ, JT1BL and JT1CD. QSL to: P.O.Box 602, Ulaanbaatar-44, Mongolia.

A few people have requested the QSL address for Monk Apollo, SV2ASP and SY2A, so here it is: Monk Apollo, Monastery Dochiariou, GR-63087 Mt. Athos, Greece.

Alan, VK0MM, reports that an "eQSL" for ONLY VK0LD is now available via the Web at the following URL: http://www.eQSL.cc/qslcard He states, "Follow the instructions on the page and you can check whether you are 'in the log' AND obtain your QSL card at the same time. The log has been VERY carefully checked, however if a card is not available for you, and you are pretty certain that you had a bona

fide QSO with VK0LD, then Email me and I will double check the original log. VK0LD QSL cards via postal means are not available." Alan's E-mail address is: vk0mm@yahoo.com
ADDED NOTE: Currently, the ARRL's DXCC Desk will not accept eQSLs for their award. However, according to Wayne, N7NG, from the League, reports, "DXCC is not prepared to accept electronic confirmations from anyone at this time. The League is actively engaged in establishing a suitable program, but it won't even be beta-tested until (probably) next summer."

SPECIAL EVENT. The USS Wisconsin Radio Club will make its debut under the callsign N4WIS during a four day special event from the Nauticus National Maritime Museum in Norfolk, Virginia, December 7-10th. This event commemorates the 59th anniversary of the attack at Pearl Harbor, and marks the permanent berthing of the Wisconsin at the Nauticus Museum. Operations from the museum will be on CW and SSB 40-10 meters (7035, 10110, 14035, 18078, 21035, 28035, 7235, 14210, 18120, 21260) as well as 2 meter FM (146.970). Times are 1300-2200z (0800-1700 EST). Other off site operation by the club on additional ham bands during other hours using the N4WIS callsign are planned. A commemorative QSL or certificate will be available. The complete press release with more information about the battleship will be sent to all OPDX InterNet Subscribers as an additional bulletin.

TT8, CHAD. The "LNDX" reports that Christian, TT8DX, has started to be active on 6 meters. There were no QSNs provided. Also, he is installing 7 elements beam soon for all HF bands.

VP2M, MONTSERRAT. "The 59(9) DX Report" reports that Graham, M0AEP, will be active from here December 6-20th as VP2MDD. There was no mention of bands or modes of operation. QSL via M0AEP.

VP5, TURKS & CAICOS ISLANDS. Bruce, AA5B, is now active from North Caicos. He was active as VP5K during last weekend's ARRL 160m Contest. He is also expected to be in the upcoming 10 meter contest running full power, but will be on the air during the week as VP5/AA5B. Look for him around the QRP frequencies and on the WARC bands alot. He states that he will be happy to have a 2xQRP QSO with you!

VP9, BERMUDA. Just a quick reminder! Mark, AA1AC, will be active next week (December 8-12th) from Hamilton Parish, Bermuda, as AA1AC/VP9. His activity will be on 80-10 meters CW/SSB. QSL via home callsign.

VY, CANADA. Dennis, K7BV, will operate the ARRL 10 Meter Contest from the VY1 Yukon multiplier. He will use VY1/K7BV in and outside of the contest. He will operate mostly CW from VY1JA's Whitehorse QTH. His "Warm-up" activity (literally-considering the location...) will occur in the 24 hours before the contest. QSL via Steve, KU9C.

ZD8, ASCENSION (Did not happen!). Jim, N6TJ/ZD8Z, was not active from here as expected during the CQWW CW Contest, but changed his plans and was active from Hawaii instead as KH7R.

2347. Re: 3880 KHZ - AM transmissions

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-03 00:00:00 UTC
From: Kevin and Elisha Strom <stroms@3950.net>
Message-ID: <3A2A7C44.5CB3B980@3950.net>
Source record: 98534
Cross-posted to: alt.radio.amateur,rec.radio.amateur.misc,rec.radio.shortwave

The area from 3870 to 3890 (and particularly 3885) kHz has long been a refuge for amateurs using AM, some of them with modified commercial or home-brew equipment with astonishingly high fidelity. They are also routinely heard around 7290-7295, and numerous spots on 160 and ten meters.

Back around 1968-1971, when AM was rapidly fading in favor of SSB, I first heard radio amateurs on 3885 with my old Philco multiband console, which naturally had no product detector. Many of the fellows, even then, (and some of the same stations -- like W3DUQ, WA1HLR, and ex-WA1EKV -- are still on the air, by the way) were using broadcast-type audio lineups and sounded very good indeed on my radio's ten-inch electrodynamic speaker.

Since then, although I use and appreciate the good points of other modes, AM has always been "real radio" to me and I have made certain (by making extensive modifications to my modern gear) that my station has always had broadcast-quality AM capabilities.

With all good wishes,

Kevin, WB4AIO.

2354. UPDATE - BAD GUY Alert Jerry Pippins

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-03 00:00:00 UTC
From: N6TGK <n6tgk@home.com>
Message-ID: <axwW5.33341$I5.557571@news1.rdc1.sdca.home.com>
Source record: 98541
Cross-posted to: rec.radio.cb,rec.radio.amateur.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment

I posted a "Bad Guy Alert" here about a week ago concerning Jerry Pippins (aka cbnut24 or cbfixxer). I stated that he was supposed to ship me a Uniden HR-2510 in exchange for my BC895 Trunk Tracker.

Jerry claimed to have shipped the radio on November 13th, I shipped the 895 on the 14th. He got the 895 on the 21st of November. On Thanksgiving day I started asking him where the 2510 was and he came up with a bunch of excuses as to why it wasn't here. He eventually responded, "Don't be a whine ass, you'll get it." After that, his e-mail address was no longer valid.

On December 2nd I FINALLY received the 2510...postmarked Nov 30!!! But that didn't bother me. At least I had finally gotten the "excellent condition... you'll love this radio" 2510 that Jerry promised me. Upon opening the box and digging through the packing I found a PATHETIC looking 2510. The case and face plate was scuffed up like you wouldn't believe. The power plug on the back is broken and pushes back into the radio whenever you try to connect the power cord, the accessory plug has epoxy all over it and someone added a speaker jack and did a very poor job of it. Upon removing the covers I found that the back part of the display was melted because some MORON removed the original lamp (probably burned out) and replaced it with a HIGHER wattage lamp. This lamp melted the display to the point that the lamp will no longer stay in place. Wires have been snipped and slodered to other locations, obviously an attempt at doing some kind of modifications. There are cold solder joints, large globs of solder and someone added a small PCB board to the underside of the RF board and is being held in place by pieces of solder. I have no idea what this board does. The radio smells like smoke and has the hint of burned components.

I obviously didn't get a fair trade since my 895 was in NEW condition and this 2510 is probably only good for parts.

Avoid this person if you can. I was able to find some feedback about this guy on Yahoo! Auctions and his feedback was very poor. He's still holding to the pattern from those posts: ships late, has several excuses and doesn't send what is promised.

Jerry... if you read these news groups... thanks a lot liar.

There is a new "CB" radio service. It operates at 151 mhz, it's called
MURS (Multiple Use Radio Service), 2 watts and a bunch of modes legal.

> It's not rocket science.

I have go the facts from the same source you cite. I never said homosexuality was not a sin. I specifically said it was. It is just as much a sin in the eyes of God to exude hatred. I also never said the BSA didn't have the right to exclude whom ever they wish. They do. That is plain. I simply made the statement that you (anyone) will be judge on their own actions. Whether it be homosexuality or hatred.

Technically the Constitution does not require 270 electoral votes, just
a majority of the votes cast. So if Florida's votes are not cast, then
AlGore has won, and the rest of us have lost.

JR is nothing more than another reprobate agitator. You think he would be worrying more about the trash on the Ham Bands but Mr. Big Sh@t Wannabe wants to be the netcop and radio cop at the same time. Like most welfare bastards, he doesn't have the time or life to mind his own business, get a job, live his life, take care of his family, pretty much the type of loser that sits behind his radio and blows off about his problems and then bitches why he doesnt have a family or anything else worth living for other than persecuting CBers or those who dont kiss his ass. Of course, like most losers, he doesnt really want anything to do with you or me other than telling us how to live our lives.

Your really funny DX401, you fit perfectly in the cb crowd. Welfare? Get a job? Well, I spent over 40 years in the electronics and computer industry, and now have a nice comfortable retirement and a net worth of something you can only dream off, a great family of children and grandchildren, and unlike you, I have never been or welfare. As far as letting come cber kiss my you-know-what, well that will never happen, I don't want to get it dirty. Dream on loser.

None of the frequencies are within any Amateur band. Two of thew
frequencies are 2455Mhz (just above the 2410-2450 band) and 10550 (just
abouve the 3 cm band 10Ghz-10.5Ghz)

I predict the real losers here will be legal HAM's & CB'ers that have local cops with an attitude, without training & equipment, and with complaining neighbors that irritate the cops with incessant whining......the legals will take a hit unless prepared to spend $'s to debunk. The original intention may have been good but, alas, as with many regulations just another example of lawmakers feigning sincerity but really wanting visibility.....they could have funded agents but that would detract from funds used to buy votes.

Have a Great Day,
Ken

Well, the posts have already been forwarded to a law enforcement
agency, so I'll let them take care of it. I don't know Strom, (nor do I
want to) I could care less about his positions in life, as a white man
I do NOT share his views. Brother Falstaff did what he felt was right,
I suppose to help me.

"Get going"? What's stopping you? The R&D in amateur radio is practically
limitless. At the same time, don't condemn those who wish to do what they
enjoy (key word) whether it be CW, RTTY, ATV, SSTV, EME, meteor scatter,
AM, FM, SS, homebrew, DX, QRP, satellites, or a dozen other areas.

By definition, monetary earnings is what pushes the commercial radio
business; such a drive plays no role in amateur radio.

Jeff

It won't matter anyway, given that the President will be chosen by the
House of Representatives. All Al's belligerence is for naught.
```

2393. Help! Talk to non-ham on my HT?

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-03 05:00:23 UTC
From: shevett@pobox.com
Message-ID: <90ck16$c0m$1@nnrp1.deja.com>
Source record: 98504

Evening folks!

I fear I am in a similar position as many other hams. My SO does not yet have her ticket, though she does say she'll get it at some point. We have many events coming up that i'd like to be able to participate in, but also be able to keep in touch with her (we have a toddler with us, so staying in touch is important).

I recently got my ticket, and I'm investing in hardware now. I'm wondering if there is a way I can equip her with a radio that does NOT require a license, and be able to talk to her through an HT I carry - while also allowing me to work with other hams on my HT.

An FRS radio would be a great idea, except I know of no HT (2m/440/etc) that can talk on FRS as well. One of the options I was thinking of was using a 'commercial' band radio (one of the motorola-class units) that sits very near the standard 2m bands... would this be a) legal, and b) possible?

I'd need an HT that allows me to 'monitor' for activity on one frequency while being actively tuned to another, so if she did key up it would 'break in' to whatever I was doing and I could hear her.

Possible? Probable? Please let me know!

The below merely describes illegal activities that a psychopath would do. Fraud comes to mind. These outlined low and dirty deeds sound a lot like something James V. O'Brien, W4AMP has done to many others in the past. He seems to be the pro at dirty dancing and other jerk-off deeds.

Good point. Some folks seem to think that lowering the license test requirements will bring in droves of new folks who are technical geniuses. Not gonna happen.

> But the activity to licensing
>ratio is a demographic thing. A man's (and like it or not is a male hobby)
>responsibilities, free time, and free money change over his life.

Agreed 100% - but it's there's more.

Social changes have radically redefined "free time" and "hobbies" - 'specially for guys. 40 years ago the one-worker family was common, with very distinct division of labor and responsibilities. Not so anymore - particularly in the demographic groups most likely to be hams.

> A certain

>evidence of it but then I tend to hang with over 50s at least with radio.
>My point here is that a priori one would expect a higher license-to-activity
>ratio than we appear to be seeing.

Here's some demographic stuff to think about:

(all of the following is about US ham numbers, except as noted).

The growth of US ham numbers has always been a VERY uneven thing. Often it contradicts conventional wisdom. Here's the past 80 years in a nutshell:

Right after WW1, there was a spurt of growth - but it quickly ended as the number of US hams stabilized at about 16,000 through most of the Roaring '20s. Then came 1929, with a double whammy - new regs that narrowed the ham bands dramatically and required most hams to rebuild their transmitters, and the beginning of the Great Depression. Yet the number of hams TRIPLED in the early thirties, reaching 46,000 by 1936!

As times got better, the growth slacked. WW2 shut ham radio down until August 1945. After V-J day there were about 60,000 US hams.

From 1946 to 1962 the number of US hams quadrupled from 60k to about a quarter million - that works out to about 8% a year for 16 years. Then, all of a sudden, the growth stopped in 1963. License totals hovered around a quarter million for almost a decade, despite the fact that the '60s and early '70s were the teenage years of most of the baby boomers! (I'm in there myself - born 1954, licensed 1967). I can give you a pack of reasons for the sudden stop in 1963, but that's for another post.

Growth resumed in the stagflated-and-energy-crisis ridden '70s and early '80s, and the numbers climbed from 250k to over 600k. Part of the apparent growth in the late 80s and early 90s was tied to the change in license term to 10 years. But things have been essentially flat through the '90s.

Lots of reasons for the above that have nothing to do with license requirements.

2408. Re: ****NEWSGROUP FRAUD**** There is a remedy Boys and Girls!

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-04 00:00:00 UTC
From: Paul <pvanasse@direcpc.com>
Message-ID: <oWNW5.4665$925.219718@news.direcpc.com>
Source record: 98442

Hello Paul:

It is very easy to legally deal with this situation. You may have noticed my previous postings on this and other NG's regarding my recent purchase gone-bad with a Ham who also happened to be a real estate agent. I was successful in getting a return check from him (however the funds still havent cleared the bank yet because it's an out-of-state personal check). Heres some simple steps your friend should take to be sucessfully recompensated.

1. Call the individual several times and demand your funds. If its a long distance or cell-phone call you will now have a written record of the calls on your phone bills.

2. Send the defendant a letter demanding your funds and mail the document using the US Post Office, CERTIFIED LETTER RETURN RECEIPT REQUESTED. On the top of this letter, before any text, put the following in bold print: "NOTICE OF IMPENDING LEGAL ACTION". In the body of this letter make sure you give the defendant a reasonable time to comply with your demands. (Based upon how far away the party is located. If he's one state away, 10 days should be plenty. If he's 3000 miles away, 30 days should be enough. You will now have a written receipt of the defendant receiving your demand letter.

3. If the accused is in a state thats easily accessed by you (ie. less than a 2-3 hour drive), call the defendants local courthouse and ask them to fax you a copy of a Small Claims Court Action Form and mail it back to them with the appropriate fee (this usually about $10). The court will then set a court date which they will also send a County of State Sheriff to serve the accused in person with the writ. If the defendant still does not comply go to court on the date set forth and argue your case in front of the Judge. Make sure you bring all of your records (ie. cancelled checks, phone records, mailing receipts, copy of newsgroup ad, copy of demand letters, etc.). If you do have to go before the court in person, you can now add any additional fees incurred by you to your original claim. (ie. long distance phone calls, mailing charges, court charges etc.).

4. If the defendant is in a state that is not easily accessed by you, which was in my case, go down to the MAIN Post Office in your area. You might want to call your local post office to find out which postal dept. nearest your location contains the offices of US Postal Inspectors. Then go down and file a written complaint with them. They will basically do all the leg work for you however it might take months because of their schedule. You still have to complete above Sections 1-2 and make sure you bring all of your records with you (as in above Section 3).

5. In addition to pursuing US Postal violations there are also US Statuatory violations can can also be invoked through your local US Attorneys office (if the accused is from out of state). These include statutes contained in the US Uniform Commercial Code (if the seller is a business), Interstate Merchandise, Internet Commerce Act, Interstate Bank Fraud, Deceptive Practices, Federal Taxation Act of 1935 (I love this one because you sick the IRS on him for not reporting the income he deceptively scammed from you, and if he does report the income, he has instantly become guilty of the Deceptive Practices Act, which is a Felony punishable up to 10 years in the big house. BTW ham radios arent allowed in Federal Prisons so a radio amateur can get pretty bored pretty fast) and there are many, many, more. It just takes some time and effort on your part. All of these same rules apply to Ebay purchases as well. Keep this in mind in the future.

6.And lastly, I did a Yahoo Internet and Deja-news search on the party to which I had the problem. I was then able to find out what NG's he hangs out on. I then posted my saga and warnings on those venues to make sure the problem hit home. I received a phone call within 1 day and a check from 700 miles away within 4 days of my complaint postings. I was fortunate that my situation involved someone who was a real estate agent because his real estate license would have been revoked in the state to which he lives if he was found guilty of the violations. Essencially, he had a lot to lose. Some folks dont really think they have much to lose until you throw the entire book at them, which I was always prepared to do in my case. It is unfortunate that one has to get "down and dirty" to make someone else do the right thing, however sometimes its the only expeditious remedy.

I hope this helps.

Paul

2409. Where to get QSL cards as gift

My father is an avid ham radio operator. He recently passed an advanced license exam and I would like to get him either new QSL cards or a gift certificate for him to design his own for Christmas.

Can anyone recommend a good QSL card dealer? US only please.

Thanks!

Lee

> >

I use a vertical 1/2 wave Ringo on 6 and have no complaints....
vertical is much better if you are working local mobils..or repeaters.
(its hard to run horz mobil) not impossible but alot of trouble. base
to base operation will do a bit better with Horz antennas. but you both
need to be Horz. and Horz. will usually work closer skip. (a shorter
bounce)

I have a Ranger RCI-2970 10-meter mobile. I purchased it used and I do not have the manual for it. I know how to make the unit do repeater offsets, but how do I make it do CTCSS tones? Are CTCSS tones an option or modification? All the 10-meter repeaters around here use a CTCSS/PL tone (most use 103.5).

Thank you,
Adam Huber

I have an ADI HT600HP dualband h/t for sale. Comes with standard charger, one battery, dry cell case for alkalines, standard antenna. I also bought a longer ant that extends for greater performance when you're not near the repeaters. It goes from 4" down to 12" fully extended. Sure helps on simplex and those far away repeaters.

Condition is about a 9+ out of a 10 scale.

Price: $250 obo shipped COD or Prepay from Las Vegas, Nv

From: Dennis Kaylor <k4oxg@earthlink.net>
Message-ID: <3A2C2312.98FC541@earthlink.net>
Source record: 98467

hello
if you want to work DX on 2 meter SSB you will need horizontal polarized
there are loops you can get that are omni but very little gain to them
on 6 meters a vertical works well when the band is open but when the
band is marginal a beam is the only way to go
as for the cushcraft antenna i have worked a few people who use it they
say its a good one just a bit hard to get turned up properly
good luck

Source record: 98575

Greetings!

I am upgrading to an SB-220 and am offering up my ol' SB-201 for sale or trade. Amp needs work. It was working fine and putting out 650 watts when something 'popped' last week towards the bottom of the amp and she stopped working. Still showing 2,100 on the HV meter, and I think the tubes are still good. I truly believe it is a simple problem for someone more adept than me. I haven't even taken the cover off and looked. I would prefer a local pickup or will deliver within a reasonable distance for a decent offer. Would take older HF gear in trade or sell for ??? This one has been modified for 10 meter operation. E-mail me with any offers, whether trade or cash.

"We?"
Why is it hams CLAIM to speak for more than themselves?

Please visit my World Wide Web Site, you have never seen a page like it. You will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chick with really big knockers
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in". 7. The writings of me and others on ham radio, hear a typical ham contact. 8. The warm side of K1OIK, hear me speak, see me with famous people. 9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Net Plus Certified
Amateur call South Dennis, Ma. (Cape Cod)
K1OIK Bacteria-the only culture most hams have

http://hfradio.org/k1oik

Source record: 98388

LRod <lr0d@my-deja.com> wrote:
: In article <8hWV5.9536$Xs2.273534@e420r-atl1.usenetserver.com>,
: Vince Paul <vpaul@plato.nmia.com> wrote:

:> ...he would NEVER recuse himself as Jeb Bush did.

: What wild speculation that is. And if you think the Jeb Bush's hands
: aren't in this whole operation behind the scenes, you are truly naive.

Hey, if I thought Carville would recuse himself, I'd be world-class
naive. Strange, though. You DIDN'T disagree with me. You KNOW
Carville would have jumped in.

:> Manual recounts are allowable only when there is a breakdown of
:> counting machines.

: Cite the statute. To save time, I will tell you that you are wrong.
: Florida Statutes, Title IX Chapter 102.166(4)(a) and (4)(c)
: I'll even make it easier for you:

: http://www.leg.state.fl.us/Statutes/index.cfm?mode=View%20Statutes&SubMe
: nu=1&App_mode=Display_Statute&Search_String=&URL=CH0102/SEC166.HTM

: but you'll have to cut and paste.

I'm not going to spend hours at the Florida Statues site. Judge
N. Sanders Saul agreed with me. I'd guess he is more familiar with
102.166 and 102.168 than I am.

And the US Supreme Court is more familiar with the Constitution and
US Code than I am. Article II Section 1 and 3USC5 tend to override
Florida 102.166, we all seem to think.

But I'll concede the point. A candidate may request a hand recount.
The problem is, neither Gore nor Bush are candidates. They are
presidential candidates in the national election. But IN FLORIDA,
it is the ELECTORS who are being voted for. The electors are the
ones who have standing, and a right to request a recount. If you'll
check the statues, you'll find the proof. I'm not going to waste
my time. _I_ can gracefully concede.

:> Bullshit.

: Exactly right.

:> And finally, if those uncounted votes are so damned important,
:> why not count ALL the "uncounted" votes in ALL of Florida.

: I'm for that. Let's do it.

Works for me. Only problem is, Gore would have a cow. "Uncounted"
ballots would also include a few thousand tossed out absentee
ballots with utterly clear "voter intent" established. It's
generally believed that the majority (60%+) are Bush votes.

In addition, the majority of counties in Florida voted for Bush.
Using the same standards, it is extremely likely that Bush would
gain votes, not Gore. So I'm willing.

And there is another problem. This violates 3USC5, which states
that the rules for an election must be in place SIX DAYS BEFORE
the election. Presumably this new count would be for informative
purposes only, not intended to change the results of the election,
right?

:> Not JUST the three heaviest Democrat counties?? Sure sounds
:> like vote manufacturing to me.

: Too bad. Check the statute. It's up to a candidate (or voter) to request
: the recount in any particular county. Whichever ones they choose is not
: up to you. Moreover, the statute specifically states that the appellant
: gets to pick any 3 precincts in the county.

Again, I'm not going to spend hours searching for snippets of
law to support my position. The statute can say that the winner
may garotte the loser. Does that make it right? Isn't that
what Gore has been spouting? Regardless of what the statutes
say, "every vote should count"? The statute also said that all
counties were supposed to have sent their certified results to
the secretary of state of Florida by November 14. So which
statutes are you talking about? The statutes which benefit
Gore? Or the statutes which he has challenged in the Florida
Supreme Court?

The statutory recount period ended on November 14, 2000. The
contest phase was delayed as a result of Gore's legal actions.
Even DADE COUNTY declined to perform manual recounts. For
someone who cites statutes, you sure seem to ignore the law
when convenient.

:> You Democrats are such hypocritical bastards. Not only do
:> you demand that the rules be changed after the election, and
:> in such a way as to benefit yourselves, but you come up with
:> some smug, stupid slogan about making "every vote count", but
:> not NOW. Just the counties that will get your candidate
:> elected. That's anarchy.

: I suppose this would be an appropriate time to point out that "you
: republicans can't read the statutes," but that is so unfair to the
: republicans I know who are smart enough to and who don't try to make
: their point by spinning misinformation wildly without any sense of
: responsibility at all. And I thought personal responsibility was one of
: the precepts republicans are constantly blathering about.

Well, for a party who "can't read the statutes", we sure managed to win in court, somehow. Perhaps we hired a Democrat scab to read them for us.

Yes, personal responsibility is something we "blather about". It would sure be nice if you Democrats and liberals would finally do something about it. Take responsibility for yourselves! Stop demanding the courts fix every little damned thing you think is unfair!

Gore's whole issue is that people who didn't read the instructions, and didn't make the effort to ask for help, may not have had their votes counted. Because they are helpless victims of their own lack of responsibility, the whole nation has to pay the price.

There were no major breakdowns in equipment in Dade County. There were just a lot of lazy voters. Since anyone can "determine the intent" of a voter by assumption in their own favor when using subjective and inconsistent criteria, guess where Gore's camp is trying to get a recount using subjective and inconsistent criteria? Right where the largest pile of uncountable votes in a Democrat county happens to be.

:> We've had eight years of Democrats breaking rules and getting
:> away with it.

: Economy's up, taxes are down, deficit is down, unemployment is down,
: interest rates are down,... yeah, you've had a tough 8 years.

The economy was up on the day Clinton took office. President Bush seems to have been good for the economy. Clinton raised taxes, taxed the dead, reaffirmed the marriage penalty, and tried to socialize the health care industry. Thank God this country managed to put in a Republican majority in Congress, or this country would have not had the easy times you credit Clinton for.

:> Most of the states, and most of the counties have voted for Bush.

: Most of the people have voted for Gore.

Recount! :) Hey, if Gore can say he "knows" Florida had more votes for him, you MUST accept that I "know" this country had more votes for Bush.

Regardless, we have a representative democracy. This keeps the power spread out a little, so that dense population areas cannot tyrannize the rest of the nation. As a citizen of New Mexico, I greatly appreciate this structure. We small states still have 2 senators, which gives us a proportionally higher amount of power (per capita) than larger states. Regardless, if 35 states voted for one candidate, and 15 others voted for the other, the candidate with the lesser amount of states could still easily win. The "will of the people" isn't an issue when Democrats win, though.

:> We have a representative democracy.
: Actually, no, but since you aren't very well informed on Florida
: election law, further civics lessons are pointless.

We're not a representative democracy??? We don't elect representatives
to the legislature and executive branches of government? My guess is,
you're just going to quibble over the wording, right?

:> ...and most of the leadership of the Democrat party.

: Wild supposition with such a broad brush renders any relevant thought
: you might have had to be suspect at best.

Aren't Republicans allowed to make suppositions too? God knows you
have. Or are you admitting that your statements are "suspect at
best" too?

I'm not debating here. I'm stating my opinions. Got different
opinions? Fine. But it's painfully obvious that you quote the
statutes when they suit you and support you, ignore the ones that
don't, make vague claims about what you want, but specific suggestions
about how to implement them, and localize the focus of those
suggestions with the clear and specific intent of accomplishing your
objectives by means which would only be fair on a global scale.

It's beyond imagination that you couldn't see the irony of your
own position.

:> Bush won. Get over it.

: We'll see. I can't wait to find out if you'll follow your own advice.

: LRod

How many US Supreme Court rulings will it take? How many appeals
rejected? How many Florida Supreme Court rulings must be vacated?
How many recounts with how many different standards? Bush WON.
Repeatedly. Whether you or Al admit it or not, it's a win for Bush.
You are not trying to clarify the results. The certified results
were required by November 26, 2000 at 5pm. Bush was certified by
Florida as the winner. You are not trying to clarify the results.
You are trying to change them. You LOST.

: Everyone is born a conservative. It takes maturity to be a Liberal.

That's so strange. I know so very many people who were liberals
when young, who followed the ideals of liberalism, but didn't really
critique the liberal agenda, but who changed to conservatives when
they started to actually take responsibility for their lives, instead
of being a dependant.

: macho bubba (n): a noisome creature, incapable of independent thought;
: fond of blind repetition of unproven allegations; exhibits propensity
: for bluster; extremely self-centered; unaware of history or the laws of
: economics; almost always of a conservative bent, although the reverse

: isn't necessarily true; mean spirited.

: Sent via Deja.com http://www.deja.com/
: Before you buy.

"Mean spirited" is a catchphrase you liberals used, and the media picked up on, to describe any conservative who doesn't cave in and give you everything you want. You make vague statements about some law being "for the children", then try to pass a law which would have no effect but to curtail the rights of americans. You've made it so obvious that it's power you want, that your tactics are now very transparent.

Remember that retired woman who "had to collect cans" to afford medication? You used her as an excuse to support a candidate who would have done something about this shameful negligence. Only, she was a union retiree. A Teamster, I think. They get medical insurance benefits. That lady was a perfect example of the brand of liberalism which would have been implemented by Gore.

I prefer the rule of law, not sound bites, based on the Constitution, not the Cause of the Week, intended to protect the rights and freedoms of the American people, not pandering to the polls and media. Bush may not be the Messiah, but he's a damned sight better than Gore. And he is the winner by all legal standards.

By the way, Bush IS the winner. The certified results of the Florida election were delivered to the Governor of Florida, who then, in accordance with Florida law, sent a Certificate of Ascertainment to the National Archives, stating that the "Republican Nominess for the office of Presidential Elector, having received the most votes, are hereby elected Presidential Electors for the State of Florida". The Florida Supreme Court has a precedent which holds that the Governor may not be ordered to modify or withdraw a valid Certificate of Ascertainment. Bush won Florida. See http://www.nara.gov/fedreg/elctcoll/2000certa.html. It's official. Bush won. Get over it.

Give us a little more info. What are your interests -- just ragchewing,
DXing, public service, experimentation, digital modes, CW, contesting,
etc.

Also where do you live -- near large population, or out in the
toolies. Can you put up a tower, or are you limited to "invisible"
antennas.

Give us some background, and you'll get a lot of good answers here.

Yes, but we got into this before.

Remember that the "pulse" modulation transmission is supposed to carry some sort of information (N0N test transmissions excepted). So just what kind of information are you encoding into the transmission? What radar comes down to is TELEMETRY (speed, distance, etc.).

I don't see where it says in 47 CFR 97.111 that "range finding" (RADAR) is an allowed transmission purpose for amateur radio, except for (b)(3) "to remotely control a device at a distant location" (where this would be a response of information from that remote device; e.g. model rocket) or 207(f) "the results of measurements of a[n] [amateur] space station...." So, where do you see "range finding" as an allowed communication content?

I live in NJ about 15 miles west of NYC so it is a VERY populated
area. I don;t think a tower would go over to well with the town or the
neighbors.

I don't really have any specific area of interest at this point. I
want to play around a little and see what grabs me. But, I figure the
place to start would be "just ragchewing" and maybe DXing. Public
service would also be a definite interest as well. I was considering
a mobile unit, mostly for the price factor.

Mike

The ARRL, America's Rotten Radio League, screwed us over a year ago. Cancel your membership before they screw you again. The ARRL board of directors wants to turn amateur radio into CB! If you cancel your membership the only people the ARRL board of directors will be able to screw is each other. Just wait, 13 months from now the CW bands will shrink, and CW testing will be ended. Thank you ARRL for turning our ham bands into SHIT!

2470. FA: Excellent Drake L4B linear and C4 console

It appears your aim in life is to build a radar gismo that will allow you to make the gun read whatever you want. Can be done but why do you want to? By setting off every radar detector for miles you will slow traffic down so badly that you will have a net loss of travel time. Also will not do much for the newer laser equipment. Nice idea but a few years late.

Hard to believe isn't it? This was in rec.radio.cb

Subject: Re: Packet radio on 26/27 mhz,where and when?
From: timnebo@aol.com (www.kp82.com)
Date: 12/5/2000 10:30 AM Eastern Standard Time
Message-id: <20001205103058.02101.00001845@ng-da1.aol.com>

most of the packet is done in europe on there legal channels so it makes it
very hard for outsiders like ourself ot get in there and connect. psk31 is
quite active on 27.500 and sstv martin1 is also real active on 27.700 usb. ive
worked more than one south pacific guy on 11 meters digital modes

>Hi,
>I have been listening for a bit now and notice that there seems to be alot
>of packet radio on 26.84,26.78,26.74,26.72 mhz all l.s.b.
>Most of the calls seem to be European ,but here in 43 division the signals
>are real weak and hard to decode .
>Does anyone know what these packet networks are ,pirate or not..
>Also are there any other freqs used for packet in the 11m band?
>Thanks
>James 43ST194 CHECK OUT THE MADE UP CALLSIGN

By the way, kp82.com is a site dedicated to illegal CB operations. The kp82
refers to a made up callsign used by the kid in Texas who runs the site.

It's easy to run a 6 (or 2) meter horizontally polarized antenna mobile. You simply mount it on your car. It's called a halo antenna. Used it very effectively back in the '60s

Greetings...

I am looking to buy 2 Kenwood desk Microphones. Would prefer them to be MC-60's, but would entertain any others. Need one for a 4-pin TS-520S and one for an 8-pin TS-440S. Also would prefer that seller take PayPal.com for payment, as I need these right away!

Thanx, es 73 de N9LXX~~~

2490. Re: UPDATE - BAD GUY Alert Jerry Pippins

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-05 02:25:40 UTC
From: The Packrat <spam@n7uic.net>
Message-ID: <EmYW5.114587$U46.3692659@news1.sttls1.wa.home.com>
Source record: 98469
Cross-posted to: rec.radio.cb,rec.radio.amateur.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment

That board is supposed to be there and these radios really don't hold up very well to any kind of abuse. Always check to see if a person sells a lot of items and check to see if they exist on ebay for references and positive feedback. Do a search on dejanews to see if the person had good or bad dealings in the past.

"N6TGK" <n6tgk@home.com> wrote in message news:axwW5.33341$I5.557571@news1.rdc1.sdca.home.com...
I posted a "Bad Guy Alert" here about a week ago concerning Jerry Pippins (aka cbnut24 or cbfixxer). I stated that he was supposed to ship me a Uniden HR-2510 in exchange for my BC895 Trunk Tracker.

Jerry claimed to have shipped the radio on November 13th, I shipped the 895 on the 14th. He got the 895 on the 21st of November. On Thanksgiving day I started asking him where the 2510 was and he came up with a bunch of excuses as to
why it wasn't here. He eventually responded, "Don't be a whine ass, you'll get it." After that, his e-mail address was no longer valid.

On December 2nd I FINALLY received the 2510...postmarked Nov 30!!! But that didn't bother me. At least I had finally gotten the "excellent condition... you'll love
this radio" 2510 that Jerry promised me. Upon opening the box and digging through the packing I found a PATHETIC looking 2510. The case and face plate
was scuffed up like you wouldn't believe. The power plug on the back is broken and
pushes back into the radio whenever you try to connect the power cord, the accessory
plug has epoxy all over it and someone added a speaker jack and did a very poor job
of it. Upon removing the covers I found that the back part of the display was melted
because some MORON removed the original lamp (probably burned out) and replaced
it with a HIGHER wattage lamp. This lamp melted the display to the point that the
lamp will no longer stay in place. Wires have been snipped and slodered to other
locations, obviously an attempt at doing some kind of modifications. There are cold
solder joints, large globs of solder and someone added a small PCB board to the underside
of the RF board and is being held in place by pieces of solder. I have no

idea
what this board does. The radio smells like smoke and has the hint of burned components.

I obviously didn't get a fair trade since my 895 was in NEW condition and this 2510 is probably only good for parts.

Avoid this person if you can. I was able to find some feedback about this guy on Yahoo! Auctions and his feedback was very poor. He's still holding to the pattern from those posts: ships late, has several excuses and doesn't send what is promised.

Jerry... if you read these news groups... thanks a lot liar.

Only if it's used as remote telemetry (and that's stretching things). Radar by itself is not a mode of communication defined in the amateur radio rules.

This is in response to your email regarding radar. The FCC does not
regulate the use of radar, however, you may wish to contact your state
or local Department of Transportation office for information regarding
this matter. You may also obtain helpful information by contacting
your local or state consumer protection office or attorney general's
office to find out what policies and regulations are in place for your
particular state.

You may find further information at the Radar Legal Page at:
http://www.radar.org.

Thank you for your email.

>>> Bob Levine <bob@ae1m.com> 07/28 11:00 AM >>>
I have purchased a K-Band radar gun

(Kustom HR-8, 24.150 Ghz, 100mw)

and would like to use it for timing
cars at auto rallys etc...

Do I need a license to use this and
how do I apply for such a license.

I am an Extra class ham radio operator.

Presuming that the pulse modulation contains intelligence intended for communications with another station, as opposed to one-way transmission.

The one-way transmissions authorized in the rules do not include "radar detection" of remote objects, and require station identification at prescribed intervals. Surplus police radar transceivers do not have such provisions.

Sorry, but this idea is DOA.

... I'm sorry but I really have to take issue with this. The typical oscillator can used in digital/computer systems has, at best, a 50ppm tolerance. I would certainly not call that a "good" standard. I assume the 8640B/opt323 at least has a counter, and the timebase for that counter is undoubtedly capable of quite a bit better than 50ppm when it's warmed up. If I remember correctly, the opt323 deletes the phase locking, and if that's the case, of course the osc will drift some. I've heard of folk adding the circuits to do the phase locking, and that seems worthwhile if you want good stability over time.

If receiving WWV is a problem, one might consider seeing if Douglas Dwyer (who has posted here in the past, I believe, or at least over on sci.electronics.design) still has inexpensive surplus high quality oscillators available. A "deja" search should find him easily. According to what NIST publishes, you shouldn't count on doing better than about 0.1ppm with WWV, but my experience with an 8640M (with oven-controlled oscillator) is that it's not stable to much better than that anyway.

Cheers,
Tom

Thank you for reminding me, I checked and it was time to renew my membership
in ARRL.

With out them it is unlikely we would have any band or privileges to
complain about.

The basic difference is price (of course) and features. Technical specs are going to be pretty much similar since they are limited to tight specs including power output, bandwidth available frequencies and antennas.

Some of these include weather receivers, signalling gizmos and the like. Range is going to be pretty much the same for either radio since the technical specs are going to be similar or identical. Range is moredependant on other factors anyway, like elevation and obstructions.

Well said! I also have been licensed a short time thanks to the no-code requirement. I don't really have an interest in CW. I have been very active in Public Service and Red Cross events, working several each year. It is a pleasure to be able to provide a service in our community and lend a hand when emergencies arise, as in the recent floods in our area and to provide other disaster relief. That is what ham radio is all about. John KC7ZBV

No Scott, just laugh at the fool when his TV, VCR,
radio equipment, etc. etc. is being ripped off
while
a trained police officer is two block away
harassing
one of his fellow hams because he saw a 3 element
tri-bander in his back yard and couldn't tell it
wasn't
a CB beam that was breaking up his rerun of Andy
Griffith and Barney Fife. Then see who has to
chase
down the offender; N8wwm NOT! His stuff isn't
as important as the $295 they got from
the ham when he finally got mad and punched the
highly trained (OH, Yeah) law enforcement officer
in the bag of doughnuts he was carrying right
above
his sam brown belt.

I too have an 8640B-323. Do you have any idea where I can find info
on adding the phase-lock ciruit used in the commercial version?

Does anyone have a manual for the commercial 8640B who could copy the
schematic(s) of the phase-lock circuit? That might be a good starting
point.

Bob, W6NBI

I too have an 8640B-323. Do you have any idea where I might find information on adding the phase-lock circuit used in the commercial version of the 8640B?

Does anyone have a copy of the commercial 8640B manual who could copy the schematic(s) which show the phase-lock circuit?

Bob, W6NBI

Well Rick,

I recently upgraded to General because of the license restructuring. I
have found HF to be very enjoyable. Not a soul has asked me if I learned
20wpm or 5wpm code, in fact I haven't talked to anyone yet that really cares
whether or not I did. Since getting my Tech Plus in '99 and the General this
past August, I have rag-chewed with many wonderful people. I feel sorry for
people like yourself that carry a chip on their shoulder.

How heavy it must be...

What exactly is a handbasket anyway? And why is it so popular to go to hell in one? Are they comfortable? Is there a limo version? Can you operate mobile?

Inquiring minds, etc, etc.

Adam,
You will need an outboard encoder, or a optional internal board. The RCI rigs do not come with a tone doard. There was a place I saw that you could order one for it but I don't remember where that was. You might try www.rciweb.com for some mods and very good info on the RCI rigs if don't mind wading through some stuff on how to convert it to 11 mtr, and where you might be able to find the tone board.

I need to know what the "real" difference is between the "two for $80"
models and "$80 each models". All seem to say 2 mile range but what about
interference etc.

Anyone have any definitive experience?

Wonder what your thoughts are regarding the R2?

Does it function as a scanner? How fast does it scan? etc.

Feel free to email me direct.

IF you want a radar license, you'll want FCC form 600, (plus schedules D, E & G), and FCC form 159, plus a check for $110. The license is good for five years.

N0N is the type of emission I put in on my license app.

Hi All,
Can anyone on the list near Indianapolis calibrate my HP-8640 OPT323 signal generator? I don't have a frequency standard to do it against. I do have the service manual for the unit and would be happy to drive to someones shack or shop to do it.

Thanks,
Jeff W8CQ
w8cq@arrl.net

There's always WWV/WWVH on 2.5, 5, 10, 15 and 20 MHz. Always works
for checking and setting my frequency counter. Can you zero beat to
one of those?

As an avid cw operator and a ham for over 29 years I must say you are completely wrong. I see more cw operators joining our ranks. They may enter at 5 wpm, but they enter none the less. With time and training from experienced hams they will attain proficiency in cw. If they choose to do other modes such as digital etc. So What. It does not make them any less a ham. It gives us diversity and fills up spectrum that otherwise would be wasted or sold to competing interests which would be the death knell for the hobby as we know it. If you are a ham please identify yourself with your call sign. That way when I hear you on the air I can go another direction. 73 OM

That's odd. I thought that the ARRL did everything in could to keep the status quo. In fact, some "Ye Olde Fahrtz" of the Ancient Radio Relay League are trying to get the FCC to go back to the old code testing scheme.

Thank You Raymond,

On the other end of the spectrum, I am not a big advocate of CW. It is a stumbling block that I haven't been able to overcome. However, I have interests in home-brew, repair and digital modes. I spend a good bit of time answering questions for other hams on areas that I do understand and even more time trying to get a better understanding of things that I don't. I also try to promote the hobby to others in a manner that is not over-bearing and from a god-like stance. I feel that the license is just a key to the door, and the new ham can take which ever fork he or she chooses after entering the realm Amateur Radio.

Now, more than ever, we need to be more gracious about extending the invitation to out ranks to replace the numbers that we have lost to attrition and attract the technical minds that have been previously turned away by the direction the League has taken in the past. I have been licensed less than 10 years, and have grown up in the shadow of Ham radio; only having a shot at it since the code requirement was dropped for entry level. I have made contributions to the hobby in many areas, and will continue to do so in the future; despite my lack of CW endorsement. I would also go the limit to support your love for CW as one of the freedoms we enjoy, on the merits of freedom alone.

I hope we can be more aware of the jealousy the industry has for the spectrum we have been awarded, and the value on the open market for it at FCC auction. If we don't do something soon to keep the numbers and usage of our current spectrum in the high percentages, it will soon go the way of the 1 1/4 meter bandwidth we lost in the beginning of the auction period. This period is still in effect until 2002 when the FCC can petition for an extension. Many among our ranks aren't even aware of this peril, and choose to ridicule others that bring it up. It needs to be in the forefront, as a constant reminder, and a level-keel approach needs too be maintained in the future.

A change in the Scope or Magnitude in the testing procedure does not necessarily mean a loss of integrity for the hobby. I would be in favor of a more in-depth technical requirement if the CW is dropped from the roster as a result of the meeting in early 2001. As it stands, CW is no longer an issue with the ITU, only the IARU; where the ARRL is the only member that still advocates it's inclusion as a requirement. That in itself is a bit of an embarrassment, as well as an open defiance to the numbers that their own internal polling yielded as early as 1996 concerning their stance on CW as a requirement.

We should hope that the League will strike a pose that is representative of it's supporters before it "stubborns itself out of existence." We do need a representative body to protect our interests, and sometimes we have to get their attention when the direction they choose to take is contrary to our continued existence. Let's hope that the result of current process of petitioning the ARRL for changing their stance in the IARU in the 2001 meeting doesn't result in a quagmire such as the one the 2000 presidential election turned into. The jury is still out on what negative effects will result from that example of "what one person trying to out stubborn the other can do" .

As long as we all maintain an open mind, and "keep out eyes on the prize", we will prevail.

Scotts suggestion is a good one to use as a standard.

The 4 pin oscillators used on computer system boards are a good standard. Digikey and Mouser have test circuits in their catalog listings. you can use a rolled collet IC socket with the un-needed pins removed and a zif socket to make a quick change frequency standard generator.

Old loran C units usually have a very accurate 10 mHz oscillator, and it can be easily used by taking a hacksaw blade and cutting the section of the circuit board loose, mounting some rubber feet, supplying input voltage and output connector.

I also have a 8640b Opt 323. It is a good unit, but doesn't have the high stability option, and can drift until warmed up. Ambient temperature in the operating environment can extend the warm up time. Even after warm-up it may still have a tendency to drift.

Component aging could be a factor, and will call for continued "correction" until they fail completely. Replacing the failing component may result in no alignment needed, and would be the best approach if isolation is possible for replacement.

How big is the manual (in terms of pages), and where did you get it? I may have to undertake the same process you are looking to one of these days.....

I do have a manual...don't recall if it's for the 8640B or 8640M, but I believe the M is essentially just a repackage of the full-blown B. There's almost certainly a B manual around here, too. I contacted a friend who I thought had added phase locking to his 8640Bopt323, but turns out he had found non-braindead 8640B's so never did it. I'm willing to do some manual photocopying, and if there are several folk interested, the copying could be a lot more efficient than if it's just one-off.

Cheers,
Tom

If it's operated under the maximum power limits of a Part 15
Intentional Radiator, then no license is necessary. You'll
note that many Part 15 bands coincide with the amateur bands.

It's already spiraling downward Bill. Not by a present lack
of operators or technology, but a minus growth of new Op's.
What kid tell me want's to speak on a ham radio and use 9600
baud packet radio when instead they can be
on the Internet with 56K or DSL, streaming audio and
video, realtime chatrooms and who know what else
is comming sown the supply chain? Heck, for under $600.00
I can have a 700 MHz Multimedia machine that will do
everything short of put the coffee on in the morning. (and when
the next generation of Internet ready consumer goods hits
the market I will be able to do that too) Contrast that to
a Radio Shach 2 meter rig that's busy with redundant "drive
time" talk and totally dead airtime the rest of the day to
keep one amused. Guess what the young people will choose
Bill? Hey, it's ok. Hamfests are drying up on the vine and
Dayton attendance is way down. The writing is on the wall
Bill----> Ham radio is obsolete because it's CORE PURPOSE
for existence is no longer relavant. Sure if the power goes out
we can pass some traffic, but that's about all. The bulk of
support now goes to private and professional emergency management
authorities, for whom ham radio is a non-productive obsolete accessory.

I have been on the air a bit and have not heard any problems I would
attribute to restucturing.

What have you heard on the air and how do you believe it is related to
restructuring?

Police radar does not operate on "Part 15" frequencies. It
operates on 10.525 GHz, 24.15 GHz, or 33.40-36.00 GHz. None
of those are amateur bands, therefor the idea is still DOA.
Police radar cannot be operated on amateur radio frequencies.

The "only" one? Didn't a Euro country recently reinstate their code
requirements for HF privileges?

>Do you realize how far out of step the United
>States amateur community appears to be to the rest of the world?

Do you want us to be like the rest of the world? Are you suggesting
a UN-administered radio exam? Or should we be like Malaysia and have
you submit your station to an annual inspection? That country still
requires a code exam and an applicant might have to wait as long as
one year to receive his license after passing a battery of exams.

Be careful what you wish for, Dave.

Hans, the game is to run at say 10.499 which is in the amateur band with a 555 or somesuch feeding audio (31.5 hz per mph sticks in my mind from 25 years ago) and capture the police receiver making it read pretty much what you want and hide behind the amateur rules when it hits the fan.

As I noted, you set off every radar detector for miles causing a jam that slows you down and you get your pretty pink tushie kicked big time when you forget to turn the damned thing off going thru East Nowhere with the 20 mph limit.

This was a big deal in 73 about 1973. It is DOA alright but mostly from old age.

Which is also a major source of interference to amateur radio (cf: "Part 15 device interference" - on "r.r.a.policy"), especially when used by the radio-clueless.

I do not see the transfusion of new technical lifeblood as a fatal stab wound at all; such transfusion would be very valuable to the Amateur Radio Service.

Here are some numbers from the AH0A site:

Mo/Yr Total licensed hams
Jan 99 672,833
Jan 00 676,718
Nov 00 682,163

The numbers are not shrinking. Not yet, anyway. When the 10-year Tech licences start expiring, there will be a drop in numbers. The numbers are artificially high, however, because at one point, the FCC went from 5 to 10 years expiration, so the expirations got delayed for 5 years.

I disagree; many homebrewers, at least in my QRP circles, are building homebrew transmitters, receivers and transceivers. For HF equipment, the turf of most homebrew ops, CW is generally much easier to build than SSB. Many homebrewers are avid CW ops for that very reason.

> Service as it is supposed to be known as).

Even those building transverters are probably going to be interested in CW. The VHF/UHF+ weak-signal folks generally use SSB or CW, the latter being used when the paths are long and the noise margins slim.

I am also not convinced that the new breed of hams is much less technically inclined than I was when I was a 14-year-old General. My antenna was a Windom, not a hgigh-gain antenna; my soldering iron a Radio Shack special, not a special purpose device and I didn't know the differences between different insulations or coaxial cables. I would like to think that I turned out okay. :-)

> I personally have no need for CW. At one time, I wanted to be more active
> in EME, but I turned to meteor scatter and other esoteric modes to fill
that

> void, modes which used what I knew and had gear for
And I personally have a need for CW, but that need is mostly personal enjoyment. MS probably works better on SSB than CW, with a faster rate, though some of the MS afficionados have been using high-speed CW bursts, albeit machine decoded. IMHO, CW is pretty inefficient for machine decoding, though, and they would be better off technically using a more robust digital modulation technique.

I don't know of any ham, CW advocate or no, who is disheartened by the newcomer making better us of VHF and up htan once was considered to be line-of-site only. In fact, most of those who are building the birds that are helping to make those international contacts a possibility are code-tested hams. Many of those who have made contributions to AMSAT to help build AO-40/Phase IIId are code-tested hams.

> It requires far more preparation, operation skill, understanding of

50 MHz and aboce is ppssible for anyone entering ham radio through any door! :-)

> Maybe this is the view of the future; the most technical minds will
> revitalize ham radio due to the modernization of the licensing
requirements;
> thus making Ham radio a viable option for generations to come.

That seems to be the very issue on the plate, David. I am a code tested ham whose operation is 99% CW. Yet, it may very well surprise you to know that my personal view is that the Morse code test should, in the long run, not be a part of Amateur Radio testing, at least not in its present form. There are many new things in radio that are much more important to Amateur Radio, and these SHOULD be made part of the tests and be made part of what new hams should strive to learn. Hopefully sooner, rather than later, this issue can be decided at an upcoming WRC.

> One thing for sure, if attrition continues to take its toll, it will just
be
> a mater of time before discussions such as these move from the realm of
> reality to the realm of philosophy.

The numbers are still increasing, David, so attrition alone is not the risk for Amateur Radio. What is at risk, IMHO, is our relevance to the rest of radio technology. The gap between what Amateur Radio is doing and what commercial radio is doing is growing. We have seen FCC people make statements and speeches that essentially tell Amateur Radio that it needs to remain technically relevant. Riley Hollingsworth often says in his speeches, "Don't let Amateur Radio become obsolete under your watch." One way or another, ham radio has to move forward into understanding and using the spectrally efficient modes that are sometimes mandatated for other radio services. To do so, we do not have to abandon our past, or our traditions. I have oft' said that it is the diversity of the Amateur Radio Service that is its greatest strength. To select that one special mode that is more "efficient" than the rest is not good for our souls, either.

Morse code has its uses, and, IMHO, even sans testing, those uses would attract users. Maybe in the future, those who love the mode and want to see it preserved in Amateur Radio, will recognize that the best way to do so is to promote it.

> The non-coded license holder has use of spectrum that numbers in the Hundreds
> of MHz, tens of GHz; as opposed to the coded and coveted 7 or so Mhz that is locked up by CW.

Yeah, but you gotta' admit, that HF spectrum does seem to have its allure. :-)

> Signing Name and Call, then going for the Asbestos Suit

I don't see why you should be flamed, David; your post was made in an intellegent, respectful and respectable manner.

Bill,
It would seem you don't have a basic understanding of the differences
between a commercial radio license and an amateur one. We as amateurs
are allowed to build our own equipment without restrictive certification
requirements imposed on commercial manufacturers. This is the major
difference that sets us apart from other radio services. Without this
one major difference we are just CB.

What does it matter how many. How many drivers can or care to do even minor
service to their autos.

When I took my test 30 years ago, there were never any questions about soldering connectors or anything else practical. Still aren't. Alot of hams go thru their entire life without owning a soldering iron and nothing in the rules requires that. Hamming has changed over the decades and will continue to change. I see no reason to make the hobby (and it is only a hobby) unreachable with lofty (or out-of-era) licensing requirements, but it shouldn't be a fill-out-a-form giveaway either. You see what happened with the effort to license CB back in the 70s. The masses didn't even adhere to a simple initials+zip code callsign rule. As new technologies evolve, amateur radio is obliged to incorporate them or else we'd all still be on spark. You should have to qualify somehow if you are gonna use the airwaves, which are a scarce resource these days.

All of what you say is very true. I've been a ham for a
long time and these days I'm a net nurd because it too is an
interesting hobby. But nothing compares with the thrill of
making contacts over the air. Its totally different.
When it comes to drafting new blood into the fold, its a lot
more difficult these days, granted, but its still there (so
far) for those that want it. Hamming started that way and
in spite of all the changes over the years, remains that
way.

You know, I DID try to get something done.

It's not the Spanish that bothered me, it was the profanity and complete
lack of rules on several high-powered, well-positioned repeaters up
toward L.A..

I was told but SANDARC (sp?) that they weren't willing to take action
against those systems, because if they WERE to get them shut down,
the users there would get on other repeaters (club systems) and do the
same thing.

I pretty much quit using my license after that.

In all reality, he'll probably make it to the air with a rig out of the box.

Once we became extra class we no longer had to do such mundane tasks as
soldering. these tasks are best relegated to those that have not achieved
our exalted status. We are gods of amateur radio!

sounds like you are an extra class operator who is scared he lost the elite status you felt you had cause you could do something not everyone else could do poor baby if you restrict the bands like that the hobby will die and everyone will lose a lot more than your elite status of being an extra class operator

I built a high density PC that used five small internal fans to move air through the cabinet. To minimize fan noise, I chose to have the fans run only as fast as necessary to maintain a fixed air outlet temperature.

To do this, I used an LM317 voltage regulator with a fixed resistor and a 220 ohm thermistor - mounted at the outlet - in the programming voltage divider. The fans do not turn on and off; they run constantly, but normally slowly.

Certainly would be the best plan if you were going for a nice quiet
arrangement for a power supply, etc.. This is for a 500 watt mobile
amplifier mounted behind the seat in a pickup truck. Heatsink
temperature picks up almost instantaneously, so I am going for some
brute force cooling with 4 fans....I would prefer they kick on full tilt
when the
temp. hits the threshold....because it means its about to get a whole
lot hotter real quick.

Scott.

A four inch 12VDC fan mounted to the heat sink blowing air into the fins
of a 4 pill amp will keep it cool and happy. Just wire it to the amps
power switch. Since it's behind the seat, a good quality fan won't be
heard. I have done this for hams and others with good results. I just
wedge the screws into the fins. You can pick up the amp with the fan.
Use finger guards if amp placement can cause fingers to enter the fan.

Happy DXing.

Would you mind explaining yourself? My posts are usually helpful.

I see nice and shiny joints when I solder, not gray, grainy and lumpy.

FYI, I know more about electronics then the last 5 hams from my SSB
club that just got their tickets. I'm not going to learn code. That's
why I don't have a ticket. I won't be classified as a "lowly tech".

Nice to hear some sane words. CW is fine for some, I'm not going to
learn it. Until the ITU lifts the code restriction, many technical
folks will bypass ham radio. I've been holding a soldering iron for
over 24 years, I've learned a whole lot since then. I won't be branded
a "lowly tech". Still waiting for a 21st century license class...

I have both amateur extra and commercial first class licenses, so I guess I do know the difference. "Allowed to build" is far different from "required to build". It would seem you don't have a basic understanding of the difference.

Message-ID: <3a306829_3@anonymous>
Source record: 98292

Why join the ARRL in the first place? What REAL benefits do they really provide for the average Ham? Insurance for your radios? Heck...you can do that elsewhere.
I wonder how much the CEO's of the ARRL make?

Considering that only one quarter of licensees belong to the ARRL, one has to ask What For?

It could be worse. You could waste your money by joining the Ten-Ten Club....

> and pass the written tests

Gosh, a 5wpm test and a written exam -was- the original amateur exam
back in 1918. If it was good enough back then when morse was a valid
means of encoding information, its more than good enough now. Don't
forget, youse guys whined and complained about the shift from spark to
cw as well.

This is an example of what self-regulating conditions is about. Some problems tend to cure them selves and go away without intervention.

This is the epitome of the concept "My father beat me when I was a child, and you're Damn right, I'm gonna beat my kids too".

No body mentioned taking disipline out of the regiment of licensing requirements. This is the reason that Ham radio faces the current peril it is experiencing in shrinking numbers and likelihood of spectrum privileges to match the numbers. Any attempt to allow transfusion of new technical lifeblood is viewed as a fatal stab wound.

2608. Buyer Beware...CETRON 811A's

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-07 00:19:33 UTC
From: Dan/W4NTI <w4nti@my-deja.com>
Message-ID: <90ml2f$7f3$1@nnrp1.deja.com>
Source record: 98361

I bought 4 each CETRON (not CENTRON) 811A's about 2 years ago. I got them from Surplus Sales of Nebraska. They are made in USA. (at least that is what it says on them).

About 6 months ago, one of them quit. I.E. opened up a leak and the filament blew out.

I replaced it with a handy RCA 811A I had laying about.

About 2 months ago two of the CETRON's dead shorted, blew out a hole in the plate and blasted the 50 ohm grid resistors. I replaced with the original Svetlana's that came with the Ameritron 811H.

A week back the last remaining CETRON did the same and blew up another resistor.

I replaced it with a spare donated by a friend. I mainly did this to see if the amp would play or not. It does, at 600 out with 80 watts of RF Drive. Of course I replaced the blown out resistors.

I'm telling you this so that the buyer is aware that these CETRON's appear to have a problem. Buyer beware.

Dan/W4NTI

A properly equipped and trained officer can easily determine the velocity
of your vehicle without having to be a physicist. Similarly, a properly
trained and equipped officer will easily be able to determine the
frequency of your transmission without having to be an electrical
engineer. Thus, hams should encounter no difficulty with this ruling.

Is it possible to put some kind of meter in the audio output of a receiver to act as an S-meter?

As I recall, ham radio was 'doomed' because of incentive
licensing when I got my license in 1970. Then later it got
'doomed' again because of the VE program. Actually, it
seems that ham radio is 'doomed' anytime there is a change
in the rules. This has been going on since the loss of
spark privileges.
Time will tell.

Then by exclusion, since the FCC does regulate amateur radio, radar cannot be used on amateur radio frequencies (except for military radar, which has a coprimary assignment in many of our bands).

Yeah, I know it's a troll, but I can't resist.

In article <Rotten_radio_League@arrl>, no-ARRL@all.com (Wouff Hong) writes:

>The ARRL, America's Rotten Radio League, screwed us over a year ago.

How, exactly, did they do that? Do you mean the restructuring? The FCC did that, not the ARRL.

>Cancel
>your membership before they screw you again.

How did they screw me the first time?

>The ARRL board of directors
>wants to turn amateur radio into CB!

How?

>If you cancel your membership the only
>people the ARRL board of directors will be able to screw is each other.

Sounds like cutting off one's nose to spite one's face....

>Just
>wait, 13 months from now the CW bands will shrink, and CW testing will be
>ended.

The only "CW bands" are 50.0 - 50.1 and 144.0 -144.1 MHz. The segments you refer to are shared by CW and digital modes.

Do you know of any NPRM to change the frequency allocations? If so, point us to it. Otherwise, you're just blowing smoke.

13 months from now is January, 2002. The FCC cannot reduce code testing any more than they already have without a change in the ITU treaty. Such a change cannot happen before 2003.

> Thank you ARRL for turning our ham bands into [expletive deleted]

Which bands are you talking about? How did the ARRL change the behavior of licensed amateurs?

For the record, the FCC, not the ARRL, changed the rules. The FCC NPRM proposed 4 classes of license instead of 6 and asked about code testing. The ARRL proposed 4 classes of license (just like the FCC) and two code test speeds. (5 and 12 wpm). The ARRL wanted better written tests. The ARRL also urged all interested parties to comment to the FCC. I did - did YOU?

Over 2200 comments were received by the FCC. More than 57% wanted at least two code test speeds. Yet the FCC dropped all code testing except 5 wpm.

More important, though, the FCC reduced the number of license classes from 6 to 3 and the number of written exams from 5 to 3. The R&O bears little resemblance to the NPRM.

In addition, the comments of KENWOOD - a FOREIGN MANUFACTURER - are mentioned at least 11 times in the R&O as reasons for various changes. That tells you a lot. You wanna blame somebody for changes, blame Kenwood.

--

However, your post did remind me to go check my membership expiration date. I'm set for a while, but maybe I'll renew early, just to be sure. Plus I'll send all of my directors (they're MY directors because I'm a member) an email about the whole S25.5 issue.

Alex - your basic, run-of-the-mill FRS radio will have 14 channels with 38 coded squelch or "quiet codes" with a maximum power output of 500mw allowed...However, there are also models being marketed out there having only one, two, or three channels, no quiet codes, lower power output, etc. Seems the advertisers dont make a big distinction about the many different models out there, maybe hoping to snag the unwary? Jay.

> And how many EXTRA class Hams,can even solder a mic connector ???
>
>

I'll make a reply to that sans anonymity.

I get a chance to meet other hams personally when they need some hardware help, or at hamfests where I tailgate from time to time. It is a toss-up on classification. There are Hams of all classes that don't know which of the iron not to stick in their mouth, what type of coax to use above 50 Mhz, how to put a connector on a piece of cable, how to make a dipole, how to read a schematic, how to draw out a circuit, how to predict a satellite or shuttle pass, why not to look directly into the laser with the remaining good eye, mathematical relationship between wavelength and antenna length, how to check and set swr on a mobile antenna, what swr is..... and the list could go on for days.

Many, if not all of these items are addressed in the various examinations that they had to pass in order to get their license. However, the main focus on their operating ability has been measured using CW as the yardstick.

It soon becomes clear how this yardstick has ended up selling the expansion and continuation of the technical end of ham radio short.

If you get a chance to go to a hamfest, check out how many tailgaters have hombrew items, and talk with them about what does and doesn't sell. Also ask them what anything they are offering does and how it is used in a circuit. Then ask them how often they use CW.

I'll venture a guess that you will find hombrew and non-turn-key vendors to be in the minority, very much aware of the technical end of the hobby, a dying breed and not very concerned about CW. Even though most had to pass the Morse element(s) for their ticket, they would be much more excited about the aspects of a Tech "Lite" building their own accessory items, using a transverter that they hombrewed, building a high gain antenna for use where they can operate, buying special purpose soldering accessories, displaying interest or knowledge on the different types of wire insulation, or coax types.. and any other aspect of the dying technical end of the hobby (or Service as it is supposed to be known as).

I personally have no need for CW. At one time, I wanted to be more active in EME, but I turned to meteor scatter and other esoteric modes to fill that void, modes which used what I knew and had gear for. The non-coded license holder has use of spectrum that numbers in the Hundreds of MHz, tens of GHz; as opposed to the coded and coveted 7 or so Mhz that is locked up by CW.

4 to 8 hour QSOs with every nationality and virtually 1/2 to 3/4 of the earth are possible with QRP power levels via AMSAT Oscar satellites. Repeatability is also a factor; one that can be counted on. There are few random contacts. Using the birds show a prowess in the use of 2 bands simultaneously, understanding and compensating for doppler shift, effect of the horizon on communications, mathematics of prediction of orbiting bodies......

I know how disheartening it is to the CW advocates for some newcomer to make more international contacts, in the rarest of locations and with the most repeatability and reliability; using spectrum that was considered to be line of sight only and thrown to the dogs who couldn't pass muster on Morse requirements.

This goes against the grain of all who support the "get CW and work the world" concept of Ham radio. CW and HF have proven to be invalid as measures of cost and reward among our ranks. That doesn't mean that neither have merit or value; just not in the proportions that merit and value has been associated with them in the past.

It requires far more preparation, operation skill, understanding of propagation, integrity of station integration .... to be able to make weak signal contacts above 50 MHz; something that is possible for anyone entering the ranks through the no-code door.

Maybe this is the view of the future; the most technical minds will revitalize ham radio due to the modernization of the licensing requirements; thus making Ham radio a viable option for generations to come.

One thing for sure, if attrition continues to take its toll, it will just be a mater of time before discussions such as these move from the realm of reality to the realm of philosophy.

More to the point, when did it change, and how many of those licensed
more recently can't, as a percentage of their total? It's huge, from
what I've seen.

Why are you clowns blaming ARRL for the "doom" of CW as an amateur mode?

Are you completely unaware that the League is the ONLY ham radio society
that consistently votes AGAINST eliminating the Morse requirement at
international conferences? Do you realize how far out of step the United
States amateur community appears to be to the rest of the world?

Noble thought but dead wrong in the implementation. Tests today require
no technical knowledge whatever should that be the route to the license
preferred by the applicant, and why shouldn't it be? The idea that code
free or technical knowledge-free licenses will draw a influx of
technical talent has been soundly
disproved by the history of the past 10 years.

Perhaps you could use a thermistor to change the bias of a transistor,
putting the load (fan) in series with the collector. Have a second
variable resistor in the gate circuit to set the thresh-hold.

Just a quick thought.

More to the point, when did it change, and how many of those licensed
more recently can't, as a percentage of their total? It's huge, from
what I've seen.

I got my Extra on April 15, 2000, and I've been soldering (including mic connectors) for 15 years.

Without knowing what the models you are looking at I can tell you some
things to look at. FRS uses 14 different freqs ant i think around 38
different CTCSS tones. Not all radios are capable of all freqs and
tones. The 2 for $80 is probably 2 freqs and maybe a handfull of
tones. Where as the $80 each can do all freqs and a lot more tones.
What this means is that if you turn your radio on and some one is
using the freq that you have tuned in you can just switch to a
different freq. But if you only have access to 2 or so there are less
freqs that you can switch to. The CTCSS tones or so that if you have
two radios set up with the same tone and one keys up the other will
break squelch, however if the tones are different or the transmitter
CTCSS is not set at all the receiving radio will not break squelch.
Some what allows you to have a little break from extra junk on the
freq. But if the receiving radio does not have tone set then it can
receive all communication over that freq.

I hope that this helps.

Hi,

I am beginner. I have a simple circuit I would like to build. I have four 12VDC fans that I would like to turn on/off if the temperature of the heatsink reaches a certain temperature (not sure which temperature yet, ~>90F). What is the simpliest way to go about building this circuit? Any good sources to look to or perhaps a simple kit already exists. It would be nice if I could
adjust the temperature and not just have one set value.

Thanks in advance for your advice.

Scott McClements.

I take it you haven't taken an Extra written exam lately then?
Wouldn't figuring complex impedances, antenna lengths, etc.
count as technical?
Admittedly, it's not as technical as drawing schematics of plate-modulated
final stages, but the average non-technical fellow is still going
to have to study quite a bit for an Extra exam. These days, with
radios out of the box, the need to be a GROL too is much more limited.

The fundamental tension seems to be between those who wish to keep things
an exclusive club / preserve the past and those who feel that unless
we as a group move towards new technologies and higher frequencies,
we will lose our justification for existance. If the latter is true, and if
we ignore the threat, "they" will probably nibble off our
frequencies over years until we're down to 40 channelized frequencies and maybe
two modes (sound familiar?) So in other words, we become a CB service
if we fail to justify our existence just as much as if we lower standards too
far.

Now, CW is a fine pastime and I can't imagine why someone would
criticize those who enjoy working it, but we need the sort of techical
minds in the hobby who may not be interested enough in CW to otherwise
get in. IMHO, of course. :)

Many things occur on the amateur bands that the FCC does not regulate
such as static crashes (all bands), Mexican fishing boats (160m),
fishing buoys (160m), foreign broadcasts (40m), Southeast Asian taxi
cabs (10m), so your argument is invalid. An unlicensed person can even
build a transmitter and operate it on certain ham bands if the xmtr
and antenna don't exceed certain criteria.

Well, Jeff, I never thought I'd see the day when I agree with you on something, but you're right on the money this time. Wayne Green buys into so much stuff, that it's hard to sort out what's legit and what's not, because, at times, he actually is correct.

His latest editorials state that the government is seeding the skies with an anthrax vaccine, because Iraq is planning a biological attack in revenge for our kicking their asses in Desert Storm. The seeding is an effort to minimize casualties without starting a panic. The government, supposedly, can't stop the attack altogether, but they can make an effort to limit the effects.

This is coming from a guy who publishes a "Secret Guide to Wisdom" that says that the sci fi classic "Stranger in a Strange Land" was written by Ray Bradbury.

I have an ADI HT600HP dualband h/t for sale. Comes with standard charger, one battery, dry cell case for alkalines, standard antenna. I also bought a longer ant that extends for greater performance when you're not near the repeaters. It goes from 4" down to 12" fully extended. Sure helps on simplex and those far away repeaters.

Condition is about a 9+ out of a 10 scale.

Price: $250 obo shipped COD or Prepay from Las Vegas, Nv

From: N0VFP
To: Sohole

Did you have a good weekend? Had to work all weekend. I'm getting ready to visit my Mom next week in Iowa. I'll be gone all next week for Thanksgiving. You got Thanksgiving plans? You'll probably goto warm Florida! Iowa gets very cold this time of year.

I'm gonna get my picture taken this week to send to you. I have a digital camera. I'll send it as soon as I get it taken.

Are you still in School? I did'nt know If you were or not.

Love,

Lloyd

Subj: Re: Hello

I dont have one done of me yet, But i will get one for you this next week. Are you trying to keep me in suspense? Are you that pretty that my computer would break?

I'm not real shy, I just like to keep one thing at a time. My SN is my Ham Radio call sign.

I hope you are feeling better and that you were thinking of me this week. I did not vote, I did not get register in time. I would have voted for Bush.

Lloyd Davies

Subj: Hello

From: N0VFP
To: Sohole

How are you?

I'm sorry I have not had time to write you back. I've been working a lot right now. I am currently trying to get some more computer courses. For starters, I have brown hair, brown eyes. I have a few extra pounds, but been trying get to them off. I see you are college educated. I like that in a girl. I once dated a gal once, who all she wanted to do was sit at home and watch TV. Not my kind of gal! I have a computer education, and trying to get my A+ certification. I would make a good amount of money if I could get it passed. I'll be taking an online course.

Well, I write you later

Lloyd

I used to hold a Radiotelephone First Class Operators License (it's
still here somewhere in a drawer). In order to exercise the privileges
that license conferred, when working on commercial radio station
equipment, I darn sure had to know how to solder. As I remember it, a
ham radio license was almost the same. Of course that was then, this is
now and it is all somehow different.

>whether or not I did.

The basic fact of it is that most active hams don't really care what tests another ham passed as long as he/she passed the required ones for the license held. Far more important is how the ham behaves, on and off the air.

The requirements for a ham license have changed many times over the years. Some changes made them harder to get, some made them easier. The trend for the past 25 years or so has been to make them easier to get. The FCC doesn't want the administrative work of tough tests and complex license structures for hams.

>Since getting my Tech Plus in '99 and the General this
>past August, I have rag-chewed with many wonderful people. I feel sorry for
>people like yourself that carry a chip on their shoulder.
>
>How heavy it must be...

Here's a comparison to consider...

There was a time when VCRs, microwaves, etc. where expensive items - the first ones cost thousands. Now you can get a decent VCR for less than $200 and a microwave for much less. They've become so inexpensive that most folks toss a busted one rather than try to get it fixed. Yet they still do the same job as the earlier, more expensive models.

Resenting someone who got a license under the new requirements instead of the old ones is like the person who spent $300 for a microwave many years ago resenting the person who got one yesterday for $70.

If the FCC allocates freq. bands similar to how the Australian Comm. Authority does than how can they say they don't regulate radar use? Since radar is a rather specialized emmission mode and if not used properly can fry your eggs quickly why would anyone want to use it except as in Bob's message? Russ 73's VK3MWR
Bob wrote in message ...

Not without obtaining Part 15 Certification on that transmitter.

Sorry, Jeffie, but you're long past running out of wiggle-room
on this DOA idea. It simply is not legal to run a police radar set
in the amateur bands.

Don't be misled by the technical complexity that appears to be present
on the tests. It is an illusion.
If it was actually a test, instead of a spoonfed memory exercise where
ALL the questions with ALL their *exact* answers were prepublished
-*together*-, mind you- then you'd have a point. As it is, all anyone
has to do is download the question pool, which has with each question a
set of possible answers with the correct answer noted. All one needs do
is immediately discard all incorrect distractors and study the questions
with the remaining correct answer as pairs, read each set of questions
through several times, and go take the exam. The correct answers just
jump out at you-they are the familiar ones, the only ones you've seen
before, and the others are not. It's a no-brainer and unless you are a
memoryless dolt, you can't miss. Do it three times and you now have the
Extra class license, quite without acquiring any knowledge whatever, or
as near that as possible.
No, I haven't taken an Extra class exam since shortly after Incentive
Licensing came in in '68. What I *did* do is administer them for 8 years

as a VE team leader.

> Admittedly, it's not as technical as drawing schematics of plate-modulated
> final stages, but the average non-technical fellow is still going
> to have to study quite a bit for an Extra exam. These days, with
> radios out of the box, the need to be a GROL too is much more limited.

Somebody gotta know something about what all of us are doing scattering
all that RF around. Can you imagine a longterm Amateur Radio Service
surviving, and being supported, where few of its practicioners actually
know anything about what they are doing except operating the gear? You
really believe any FCC would or could continue to support it? Can you
say "history repeats itself" as on 27 mhz?

> The fundamental tension seems to be between those who wish to keep things
> an exclusive club / preserve the past and those who feel that unless
> we as a group move towards new technologies and higher frequencies,
> we will lose our justification for existance.

Someboduy here on the net keeps saying "Those who forget the past
forfeit the future". Nowhere do I see that exhibited more clearly than
in ham radio. No one has ever suggested that time stop or progress be
stimied. Nothing in all that suggests we should simply abandon
everything not of todays design.

If the latter is true, and if
> we ignore the threat, "they" will probably nibble off our
> frequencies over years until we're down to 40 channelized frequencies and maybe
> two modes (sound familiar?)

So why do you think "they" won' get whatever part of "out" spectrum
that is needed for the public good and commercial develop[ment anyway???
History tells us that is how it has been and will be in the future. Hams
got kicked to "200 Meters and Down" sinply because we were the way of
commercial development. Not that long ago we had access to ALL spectrum
above VHF. Look at what has happened up there in more recent years.
Nothing has changed nor will it. When it is needed, specrum WILL be
taken from ham allocations and probably not replaced. But FCC has been
really generous over the years in allowing USA hams access to parts of
the spectrum not needed or abandoned by commercials, so we probably will
pick up some more, especially in LF and VLF areas. Change is ubiquitous.
This is not a freeze-framed area, it is continually in flux. Anyone who
believes we can "preserve" out spectrum is selfdelusional.

So in other words, we become a CB service
> if we fail to justify our existence just as much as if we lower standards too
> far.
>

Licensing a service loaded with people who really believe that because
they passed some "tests" which tested little except their ability to
make word associations does little or nothing to keep the ARS from
becoming another CB, with an attitude.

> Now, CW is a fine pastime and I can't imagine why someone would
> criticize those who enjoy working it, but we need the sort of techical
> minds in the hobby who may not be interested enough in CW to otherwise
> get in. IMHO, of course. :)

So who said a single word about CW? This discussion is strictly about
the lowered technical requirements, which by all accounts some persons
of influence are working hard to see that they are reduced much further,
in fact all the way to none (W5YI for one).

What is really being objected to is you guys insisting that the "top rung" be dragged down to the "lowest level rung". If you can't see what that does to the the ARS then further discussion is probably futile. No one is saying that things should not change, now, in the past nor the future. But not all change is for the better, and much change that is made simply to appease the "squeaky wheels" is detrimental, as always. When protesters decide what the changes will be, what makes that automatically a positive thing? Take a look at Dick Mcullom's post on "Wet Firecracker Report" and see just what an "influx" the new regulations have had on total numbers of hams. If that is a precursor, the future doesn't look to bright for your goal of increasisng numbers of hams. I really believe that handing out free licenses on streetcorners would have about the same effect. None. Blame the 'net, that's where everone has gone. Including us.

I do believe things were better in the old days when "rungs" didn't exist like they do today. IMO there should only be one license class. You should have to prove you know enough to get on the air and not cause QRM around the world. Everything beyond that can be learn-as-you-go.

Unfortunately, a lot of hams like to view their extra class license as some kind of exclusive club they belong to, one which requires hazing of the unwashed masses in order to get in. Again, IMO, this is wrong, and discourages a lot of fine folks who would make good hams given a chance.

And yes, I do have one of those extras. Look it up.

The MC80 is an electret element on a gooseneck with a 4.5x6x2 inch base, up/down buttons, ptt, and ptt lock buttons on the top of the base, and a little potentiometer for output adjust on the back of the base. The MC85 is the same electret element on the gooseneck, but the base is twice as wide and has additional stuff: mic level slider, compression slider, vu meter for level, a two position tone switch, and is set up with three additional holes in the back for a total of three separate output cables with switching buttons on the top. The one I have, however, doesn't have any plugs in the holes for the two additional output cables, so I'm assuming that it comes without them, and that this feature costs extra.

I highly recommend you use the grey matter located between your ears.
The ears are used to couple the Audio Frequency from a RF detecting
device (receiver) that converts the radio frequency to a audio
frequency and thus made detectable by the ear.

For transmit a hand pump, bug, keyer can be used. This device is
coupled to the same grey matter by your arm,wrist and fingers.
Translation of digital is done by magic in the same grey matter.

Have fun.

Try CWtype and CWget for sending and receiving Morse via computer. I use
CWget for translating CW signals faster than I can follow. Works pretty well
on my laptop, just plugging the external speaker output into the sound card
input. Works best for strong signals without a lot of background noise.
Fading propagation causes problems. These products are available for download
at: http://www.dxsoft.com/

Such things could be considered "technical" if the person being tested
actually had to do them to pass the test. As Dick points out below,
such is not the case at all.
>
> Don't be misled by the technical complexity that appears to be

or
> as near that as possible.

That's been true for almost two decades. The recent changes made the situation worse, because the number of tests and the number of questions have been drastically reduced. Most of what remains is, of necessity, about the regulations and safety.

There are several websites that will let you take a simulated written test. Go to any of them and try one of the simulated tests, and see how many questions you get on complex impedances - or Ohm's Law for DC circuits, for that many. Note also how few really different questions on a given subject exist.

What it boils down to is that a person can be almost totally ignorant of lots of stuff that's "on the test" and still pass. Plus if you fail, just pony up another fee and try again at the same session.

> No, I haven't taken an Extra class exam since shortly after Incentive
> Licensing came in in '68. What I *did* do is administer them for 8
years
> as a VE team leader.

I took the Extra in 1970 - "the old way". Every so often I take a sample test online. In my experience the post-April-15-2000 written tests are easier than the ones that immediately preceded them. There is no comparison to the tests of the '60s and '70s - and those ancient tests weren't very hard, anyway.
>
> > Admittedly, it's not as technical as drawing schematics of plate-

modulated
> > final stages, but the average non-technical fellow is still going

That depends entirely on the person. I never studied for any amateur exam. Didn't need to - had to learn the stuff to get on the air.

> These days, with
> > radios out of the box, the need to be a GROL too is much more limited.

One of the purposes of the amateur radio service is for hams to be technically knowledgeable. The license tests used to support that goal much more than they do today.
>
> Somebody gotta know something about what all of us are doing scattering

Exactly.
>
> > The fundamental tension seems to be between those who wish to keep things
> > an exclusive club

"Exclusive club"? Not at all. Never has been, at least not in the USA. All anyone needed to do was pass the tests and you get a license. No age limit, no quota, and the tests were never that hard. A few years ago, an 8 year old got an Extra.

>/ preserve the past and those who feel that unless
> > we as a group move towards new technologies and higher frequencies,
> > we will lose our justification for existance.

Since 1991, all amateur privileges above 30 MHz have been available to anyone who could pass the Tech written test. In April that test was reduced to just 35 questions.
>
> Someboduy here on the net keeps saying "Those who forget the past

> stimied. Nothing in all that suggests we should simply abandon
> everything not of todays design.

Exactly. Those who want to try out higher frequencies have plenty of room to do so. WITHOUT a code test or multiple written tests.
>

Yet some folks do - at every opportunity. Why do you think that is?

> but we need the sort of techical
> > minds in the hobby who may not be interested enough in CW to
otherwise
> > get in. IMHO, of course. :)

They don't need to know CW to get a license. Just an HF license.

A decade ago, some folks predicted a technical revolution in ham radio would occur because of the dropping of the code test for the Tech. Didn't happen. Why should anyone think it will happen if all code testing disappears?
>
> So who said a single word about CW? This discussion is strictly about

To remove any doubt, the remarks were made with my tongue firmly planted in my cheek. As a confirmed homebrewer I can assure you there are soldering iron burns on both the workbench and the carpet!

My present rig is a modified Heathkit VFO converted to transistor operation feeding an SB10 I assembled for use on a DX100 in the 60's. This drives a pair of 6146's which feed a pair of 4-400's (Both pieces homebrew) when I need a bit of a kick. My receiver is a purchased Collins 75A4 with an outboard DSP homebrew unit.

Hello,
Next summer I am planing on setting up a Satellite station. I intend
to use the m2 2MCP22(2m 22 element cross polarized yagi) and
436CP42UG(440mhz 42 element cross polarized yagi) with the yaesu G-5500
azimuth/elevation rotator. My question is, how well would this setup
work for EME, if at all? I've been told that you need array of many
antennas to work EME, is this true?? Thanks.

If you wish to reply via email please use my email address on Qrz.com as
I do not use my true email address on Usenet for Spam reasons.

>>>A properly equipped and trained officer can easily determine the
>>>velocity of your vehicle without having to be a physicist. Similarly,

>> A first year physicist learns the difference between velocity and speed
>> (one is a scalar, the other is a vector). Do mathematicians?

Yes. Speed is the absolute value of velocity: S = |V|, i.e., the length
of the velocity vector. Taking the officer as the point of reference,
a speeding vehicle approaching him would be of the opposite sign as
a vehicle speeding away from him, thus "velocity."

>And while you are exact and correct, does it stop the cop from giving you a

Depending on the frequency range in question a antenna gain in the
order of 20 db is considered normal for EME.

i would suggest stacking atleast 2 of each to improve gain and actually 4
would be ever better and you will need atleast 160 watts
there is a lot of signal loss between the earth and the moon and back and
you will also need a good preamp
good luck

>antennas to work EME, is this true?? Thanks.

Randy,

For 2m EME I would suggest a minimum antenna gain of 20 dBi, at least 1KW to the antenna and a noise figure of about 1 dB.

You can work some of the "big guns" (W5UN, KB8RQ, SM5FRH, F3VS, et.al) with less but that's about it. I have worked all of these guys using 1KW out, a HB 17 el, 3.2 wavelength Yagi, 180' of 1/2" Heliax and a 0.8 dB NF preamp (in the shack).

Before changing QTH, I had four of these Yagis and a short run of RG-17 and could hear my echoes about half of the time. I don't believe you are really EME capable until you can hear your own echoes.

Exactly. And that's all it is - a basic knowledge.
>
> > and pass the written tests

Yup - but the written test was somewhat different!

And in 1919 the test speed was doubled to 10 wpm.

> If it was good enough back then when morse was a valid
> means of encoding information, its more than good enough now.

When did Morse stop being "a valid means of encoding information"? From
what I hear and do on the ham bands, it's still in wide use and
quite "valid".

> Don't
> forget, youse guys whined and complained about the shift from spark to
> cw as well.

That shift happened more than 75 years ago. About 30 years before I was
even born.

And it happened voluntarily. Tube transmitters gave results that were
so much better than spark rigs of the same cost, and used up so much
less spectrum, that it was a done deal by 1924.

When was that, Bill?

Since at least the end of WW2, there have been multiple amateur radio
license classes here in the USA. There have always been "rungs" - just
the number and their spacing has changed.

> IMO there should only be one license class. You should have to
> prove you know enough to get on the air and not cause QRM around the
world.
> Everything beyond that can be learn-as-you-go.

The result would be a license that was at least the equivalent of the
current Extra - as a first-and-only step.
>

Some of them obviously do. They're mistaken, of course. No way is it
an "exclusive club" anybody who can pass the tests gets the license.
Heck, they even let ME in!

> Again, IMO, this is wrong, and discourages a lot of
> fine folks who would make good hams given a chance.

Bad attitudes exist on all sides. Good ones, too. I try to focus on the
latter.
>

I think its quite odd that I have held an Extra for over 30 years and
so far I have yet to meet a single Extra that fits your mold. OTOH, I
have met manyh, and been one, who have done everything reasonably
possible to help newcomers get into the hobby. Including starting up a
VE team, the only one in the region, and running it for eight years,
until it virtually licensed so many other hams who eventually started
their own teams and the ours became redundant, so it closed shop.And I
didn't just run a VE team, I operated under the philosophy that getting
a ham radio license should be no more difficult than necessary. But the
open question pools are a travesty indeed almost fraudulant. Why pretend
to test complex subject matter when no actual learning is required to
pass any of the tests?
The fact that I and some others know that radiotelegraph code remains a
viable and effective while simple, easy to implement mode of
communications which can be used most effectively within ham radio, even
though its use has been abandoned by other services, seems to be the
main sticking point. Anyone who supports code and any sort of code test
within ham radio is automatically a target. So be it.

Nope. Not going to take that bait bub. Nice try though. Excellent
example of an opinionated unproductive post.

I've already passed my Morse test. I'm referring to high speed
"bursts" that are impossible to copy or transmit using "grey matter"
Which BTW works just fine on this end.

First, I want to thank all the people for the replies. I do have a few more questions. You suggest "Stacking 2 of each". Do you mean stacking them in series or parallel to each other. Others replied that I need min of 20db gain, would "stacking" two add the gain of two antennas? Also to connect the two antenna to the same coax would i use a Y-connector??

Let me see if I understand if I "stack" 2 2MCP22 antennas each having 16db gain would that give me 32db gain??

Thanks Again?

What application are you refering to? HSCW as in High Speed CW, that
is used for scatter and EME work? Or what? And you didn't mention and
high speed bursting in your original post. What speed is that High
Speed at?

When you stack another equivilant antenna you will get about 3db of
gain, better fb/fs and sharper pattern.

Stacking means one on top of the other. Then if you add two more you
put them beside the other two. Parallel feed.

Dan/W4NTI

p/s See a good VHF antenna book for more info.

2700. Dimples, Dimples, and More Dimples

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-08 23:52:38 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3A317444.8A82D02@sccoast.net>
Source record: 98218
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Following the not very surprising ruling today by the biased Florida Supreme Court, which has not ruled once in favor of Bush, we are back to the endless recount of dimpled ballots, and to discussing the legitimacy of counting dimpled ballots in an effort to guess, at least in the context of the bias of the person counting the ballots, what the voter intended. With that in mind, I'd like to introduce an argument that I've not seen offered before when discussing dimpled ballots.

As most people know, in a punch card system, the voter is supposed to punch out a small, perforated, spot on the card to make a hole beside the candidate of their choice. However, for some reason, following every election, not all ballots contain a hole that has been punched beside any candidate. In some cases, it might be because the voter simply decided not to select a candidate. And, in other cases, is is because the voter failed to follow instructions and punch the hole fully.

A dimpled ballot is a card that has an indention, however slight, in one of the spots where a person punches the card to select a candidate, instead of a full hole that occurs when a person properly follows the instructions.

The people involved in the hand recounts in Florida are looking at all cards where a full hole is not present to see if a dimple is present instead, and if so the card is added to the count of the candidate listed beside the dimple.

In almost every election, in addition to dimples, there are a large number of ballots where pieces of chad, the piece of card punched out, do not fall off completely. These pieces, while punched through enough to allow a machine reader to view the hole, still dangle under the card, often hanging by no more than a single strand of paper (card).

And this brings me to the point of this message. What happens to the cards around this card with the hanging chad? Obviously, if you place a card next to a card with a small piece of paper (card) hanging, the second card is going to be indented by the small piece of paper (card) that is now pressed between the two cards.

In fact, if the hanging chad was bunched up between the two cards, and the cards firmly pressed together from the weight of other cards stacked on top of them, the indention in the surrounding cards could be fairly pronounced. Actually, one could even argue that it is possible for a hanging chad to even punch out the perforated spot to make a hole in a surrounding ballot, but I'll leave that for others to argue.

So, if we know that some cards might have dimples that were not placed there by the voter, but were instead pressed into the card by hanging chads from the cards around it, is it correct to count these dimpled ballots as a vote for a particular candidate? In other words, are we counting the intent of the voter who submitted that card, or the intent of the voter who submitted the card, with the hanging chad, that was placed in the stack above that card?

If this scenario is at all possible, then a dimpled ballot cannot be consider a legitimate vote. Therefore, any vote count that includes dimpled ballots is flawed and should not be considered valid.

: that is now pressed between the two cards.

Obvious to whom? Have you actually tried this? The "cards" are rather
stiff paper (thin cardboard).

: In fact, if the hanging chad was bunched up between the two cards, and
: the cards firmly pressed together from the weight of other cards stacked
: on top of them, the indention in the surrounding cards could be fairly
: pronounced.

In that case the "dimple" would be above/below or to one side of the next
"hole" since the chad is >"hanging"< to start with.

One could also argue that the chad has been pressed -BACK- into the hole
by the other cards.

Besides;
Perhaps that's why we only see piles no more than ~1/2" think standing on
top of each other, and large volumes of cards standing *vertically* in boxes
etc. The pres. holes are in the upper left hand corner of the
card. And since the cards are stacked in an "X" form, there isn't that much
weight on the corners. So much for this theory.

; Actually, one could even argue that it is possible for a
: hanging chad to even punch out the perforated spot to make a hole in a
: surrounding ballot, but I'll leave that for others to argue.

Or the other cards could push the chad BACK into the hole it came from.

: So, if we know that some cards might have dimples that were not placed
: there by the voter, but were instead pressed into the card by hanging
: chads from the cards around it,

You haven't proved this.

; is it correct to count these dimpled
: ballots as a vote for a particular candidate?

First prove your dimpled theory.

; In other words, are we
: counting the intent of the voter who submitted that card, or the intent
: of the voter who submitted the card, with the hanging chad, that was
: placed in the stack above that card?

Yep - nope.

: If this scenario is at all possible, then a dimpled ballot cannot be
: consider a legitimate vote. Therefore, any vote count that includes
: dimpled ballots is flawed and should not be considered valid.

And now, how do we explain those chads that got pregnant? Oh yes, it
most be all that pressing against the guys with the dimples. :)

If you would have watched the testimony of the experts on the machines,
you would have heard that the 'chute' behind the "chad" can become
clogged and in that case, the voter cannot fully punch the hole and in
some cases produce the "dimpled chad."

I am not sure I understand your position.

1.The FCC has jurisdiction over all frequencies.
2. The FCC says it does not control radar.

3. My read would be that any freq is open to the use of radar.

4. I am open to contrary opinions if you can show who has control.

Jefff_b@my-deja.com answered that the last time you asked.
Here is a copy:
The MC80 is an electret element on a gooseneck with a 4.5x6x2 inch
base, up/down buttons, ptt, and ptt lock buttons on the top of the
base, and a little potentiometer for output adjust on the back of the
base. The MC85 is the same electret element on the gooseneck, but the
base is twice as wide and has additional stuff: mic level slider,
compression slider, vu meter for level, a two position tone switch, and
is set up with three additional holes in the back for a total of three
separate output cables with switching buttons on the top. The one I
have, however, doesn't have any plugs in the holes for the two
additional output cables, so I'm assuming that it comes without them,
and that this feature costs extra.

>quo.

You're mistaken.

The ARRL BOD proposal to the FCC included the following:

- Four classes of license (Tech/Gen/Adv/Extra) - just like the FCC NPRM proposed.

- "Instant upgrade" of existing Novices and Tech Pluses to General.

- Two code test speeds - 5 wpm for General, 12 wpm for Advanced and Extra.

- Improved written tests.

- Most of the existing Novice/Tech Plus subbands reallocated to 'phone/image use.

The above is hardly the status quo of 1998-1999.

>In fact, some "Ye Olde Fahrtz" of the Ancient Radio Relay League are
>trying to get the FCC to go back to the old code testing scheme.
>
Who? Give us their names and calls.

And which "old code testing scheme" are you referring to? Having to legibly copy a solid one minute out of five? Having to pass a sending test? Having to test in front of an FCC official? Having to copy unknown plain text, not a typical QSO? Having to wait at least thirty days before retesting if you fail? Having to pass all of the requirements at the same test session?

How about having to do all of the above?

And the number of chads to make this possible was in the millions and would indeed be experienced if the machines were not cleaned every 20 years or so. I watched every second of the trial and after this nonsense is over I am applying to the Bar to become an attorney.

If you had REALLY listened, you would know that it is "theoretically possible," takes an "overdose" of about 10 times the normal number of ballots that the machine is rated for.

OK, and to prove that FCC doesn't care where you *interfere*
with your radar, stroke one up on one of your local police or
fire frequencies. When the FCC shows up, tell them they have
no jurisdiction to control your radar. Tell them Jeffie said
it was OK.

Good luck on this one now!

I agree 100%. But what will it take to get such a transfusion? Eliminating the
code test for all ham privileges above 50 MHz didn't do it.
>
>Here are some numbers from the AH0A site:
>
>Mo/Yr Total licensed hams
>Jan 99 672,833
>Jan 00 676,718
>Nov 00 682,163

Yup. But that's not the whole story by any means. For one thing, whenever
there's a decrease in the "price" of something, there is usually a surge in
"sales". I think this is called "pent up demand". Lowering the license
requirements has brought in a quick surge of a few thousand newcomers, but the
changes are only a few months old. How long will the growth rate of this year
continue?
>
>The numbers are not shrinking. Not yet, anyway. When the 10-year Tech
>licences start expiring, there will be a drop in numbers.

Maybe. The fact is, nobody really knows how many of those licenses will be
renewed.

What really matters is not how many hams there are, but how many ACTIVE hams
there are, and what they are doing. But determining how many of the 682,000
hams are active, and what they are doing, is a much harder task than simply
looking at the FCC database.

Consider how crowded the bands get during a major activity like Field Day -
then recall that all of that crowding is caused by a few tens of thousands of
hams all on the air at once. Imagine if just 20% of those 682,000 US hams were
on the air at any one time...

>The numbers are
>artificially high, however, because at one point, the FCC went from 5 to 10
>years expiration, so the expirations got delayed for 5 years.

The change took place in 1984. From 1989 to 1994, no US ham licenses expired at all. Then in 1995 the first of the 10 year licenses started running out. It will take years for things to settle down.

Which is better - a million ham licenses, but only 100,000 active, or a half million, but 400,000 active?

My opinion, which admittedly isn't worth a whole heck of a lot, is that partially punched holes should count (light has to break through somewhere), otherwise no count. I'd be worried about the handling, storing, whatever. But, should this make you feel better, I received an e-mail which states that Japan has sent 50,000,000 cases of Viagra to the United States. Seems Japan heard the whole United States couldn't get an election.

The original thread was referring to x-band radar, I cannot invision where interference might ever be a problem. If indeed you did happen to "jam" Barney Fife, I doubt he would recognize what it was, and would be of such a transitory nature as not to be a problem. I would take the FCC at their word that they did not regulate RADAR and operate it with impunity.

That was just one theoretical possibility offered, Randy. My scenario
is another possibility, just as valid as that one. However, if my
scenario is even remotely possible, then dimples should not be counted.

> The "cards" are rather stiff paper (thin cardboard).

Laid two pieces of paper together with something in between? Of course I have, and I'm sure you have also. And in each case, a indention was made where the object rested between the two pieces of paper, especially if weight of any amount was added.

> In that case the "dimple" would be above/below or
> to one side of the next "hole" since the chad is
> >"hanging"< to start with.

Have you actually tried this? A piece of paper, or any other flexible material, that is punched will tend to return to it previous position, which will line it up directly above the preferated spot in the card below it.

> > So, if we know that some cards might have
> > dimples that were not placed there by the voter,

> > chads from the cards around it,
>
> You haven't proved this.

I don't have to prove it, Jim. All I have to do is suggest a reasonable possibility, however slight, for error when considering intent using dimples for that dimpled count process to be suspect. I have offered that reasonable possibility, therefore counting dimples to determine the intent of the voter is suspect, therefore any count based on that is not ligitimate.

This afternoon, the Florida Supreme Court ordered the 383 votes (215 from Palm Beach and 168 from Miami/Dade) gained by Gore during the recent recounts be added to the state totals.

However, Bush also gained votes during those recounts, so why didn't the Supreme Court order the votes for Bush added also?

It is great to see all you extra class (whatever the hell that is) patting yourselves on the ass but why don't you do it in your own NG.

: >
: > Obvious to whom? Have you actually tried this?
: > The "cards" are rather stiff paper (thin cardboard).

: Laid two pieces of paper together with something in between?

No, not two pieces of "paper".... two Florida *ballots*. We don't vote
with "pieces of paper".

: Of course I have, and I'm sure you have also.

Actually the only time I get ahold of a ballot is when I walk from the
sign-in table to the machine and then to the lock box.

: And in each case, a
: indention was made where the object rested between the two pieces of
: paper, especially if weight of any amount was added.

Did you also notice that one of the "dimples" was on the *WRONG* side of
the two sheets of paper on either side of the chad (since the ballots are
only printed on ONE side)? ?:0

Hint: Try it on the real thing.... then get back to us.

: > In that case the "dimple" would be above/below or
: > to one side of the next "hole" since the chad is
: > >"hanging"< to start with.

: Have you actually tried this?

Which way do your "chads" hang? =80

If the chad was lined up with it's original hole, it is just as likely to
be pushed back INTO the hole by the next card that doesn't have that hole
punched out (a more likely thing to happen).

; A piece of paper, or any other flexible
: material, that is punched will tend to return to it previous position,

: which will line it up directly above the preferated spot in the card
: below it.

Try it on real ballots (not paper) and get back to us.

I'm quite sure that the ballots are actually micro groved so the chad
falls out easier. Otherwise the cardboard would tend to TEAR and not puch
out smoothly since the punch neadle is ROUND and the chad hole is
RECTANGULAR. Hmmmmmmmmm.

: > > So, if we know that some cards might have
: > > dimples that were not placed there by the voter,
: > > but were instead pressed into the card by hanging
: > > chads from the cards around it,
: >
: > You haven't proved this.

: I don't have to prove it, Jim. All I have to do is suggest a
: reasonable possibility, however slight,

Are you an incarnated Mr. E. June? He preached that BS too.

; for error when considering
: intent using dimples for that dimpled count process to be suspect.

How many "dimples" were really counted as "votes"? Not rumors, real numbers.

: I have offered that reasonable possibility,

That *paper* will take an impression of something if pressed quite hard.
Now try it on a voting ballot.

: therefore counting dimples to
: determine the intent of the voter is suspect, therefore any count based
: on that is not ligitimate.

Actually I think they only counted hanging chad by two or LESS corners in
Broward. But keep working on the dimple problem..... :)

But if you get your crazy idea, then I present that dimples are formed
when the moisture traped only in the punch out areas of the ballot suddenly
expand when exposed to all the hot air that surrounds the lawyers
watching the counting. This causes the ballots on either side of the now
pregnant ballot to be "dimpled". (There -is- a remote possibility that
this could happen.....)

Let's not get into the minor detail that one of the dimples is in the
wrong direction and neither dimple is in the hole area of the other two
cards.

You might tell the full story. The testimony went on to include the information that it would take something like 1.6 million chad to build up to the point that could possibly happen. And when the maching is folded up and picked up by its side handle, the chad fall down to the end and out of the way, where space is even more plentiful.

From the same counties that gore got his. They gave Bush a hundred and some odd votes. See if you can find a recording of the anouncement someplace on the web. It was in there. Might have been hard to hear over the cheers and boos from the crowd though. I'll try and find it on a news site and if I do I'll post the url.

I stand corrected. I could have sworn I heard them say that Bush got some too but I must have heard the "168" and assumed it was for Bush. What a load of crap. What is the point of the recount if they are ensuring the inclusion of x number of votes any way? Shouldn't the total from the recount be the one that is used?

Here is the transcript:

The court has authorized the following statement.

"By a vote of four to three, the majority of the court has reversed the decision of the trial court in part. It has further ordered that the Circuit Court of the 2nd Judicial Circuit here in Tallahassee shall immediately begin a manual recount of the approximately 9,000 Miami-Dade ballots that registered undervotes.

"In addition, the Circuit Court shall enter orders ensuring the inclusion of the additional 215 legal votes for Vice President Gore in Palm Beach County and the 168 additional legal votes from Miami-Dade County.

"In addition, the Circuit Court shall order a manual recount of all undervotes in any Florida county where such a recount has not yet occurred.

"Because time is of the essence, the recount shall commence immediately. In tabulating what constitutes a legal vote, the standard to be used is the one provided by the legislature, 'a vote shall be counted where there is a clear indication of the intent of the voter'."

Chief Justice Charles T. Wells and Justice Major B. Harding have written dissenting opinions. Justice Leander J. Shaw Jr., has joined in the dissenting opinion of Justice Harding.

Thank you.

168 which are votes from only a partial recount of the county, and just the
Democratiic precincts. Then they quit counting. According to FL law, partial
recounts are illegal. The Fed's will have a ball with this ruling...

So basically anyone who was stupid enough to enter two votes on one ballot will get theirs counted as a Gore vote. I have no sympathy for these people. How can their intentions be definitively guessed?

The same goes for the ballots which were not punched completeley through. I'm sure the instructions state that the hole must be complete. Remember those test we took in school where you had to use a #2 pencil without any stray marks? Can I sue my school for all of my missed points because it wasn't fair and my intentions were not taken into consideration?

Gore lost. Bush won. Time to move on.

Actually, Dwight, I don't think that the pressure of any manageable stack of punch cards will result in a dent from a single chad pressed between two cards, but it would be an experiment worth trying -- why don't you contact the Bush team with this concern, ASAP, and let them see what they get when they try with real ballots?

NEVER assume that the lawyers have thought of something involving the real world, because their mindset is in a completely different direction.

To add a bit to what Jim is saying, the Extras currently in force total up
by expiration year as follows:
2001 5,936
2002 6,816
2003 9,748
2004 10,920
2005 7,582
2006 14,386
2007 13,344
2008 9,997
2009 6,337
2010 8,135

tot 93,201

I don't think there's much that the battalions of lawyers now down there working on all this have overlooked. They've been discussing this very thing on TV. Watch Fox News Channel, they have had continuous coverage since it all started, and they interview EVERYBODY on both sides. There is no better coverage. I get it off DirectTV, the hardware package for which is now available at Walmart for a measly $50. Of course it requies a monthly subscription which is still competetive with cable amd gives MUCH better video and overall service.

A simple, direct question: Why not?

All that's required now is a 5 wpm receiving test.

>Until the ITU lifts the code restriction, many technical
>folks will bypass ham radio.

And after it's gone, many will continue to bypass ham radio. The 1991 changes
in the Tech requirements were supposed to attract lots of "technical people".
Didn't happen.

>I've been holding a soldering iron for
>over 24 years, I've learned a whole lot since then.

I've been soldering for at least 35 years - learned how before I learned Morse.
Still build my gear - do you?

> I won't be branded
>a "lowly tech".

Who would do that? The license says "Technician". 99.9+% of the hams I
encounter don't care a whit what somebody's license class is, as long as they
play by the rules. The "lowly" stuff is a label you stick on yourself.

>Still waiting for a 21st century license class...

Which would look like what?

As the good ole boy at the Olympics said as he pulled out the 12
gauge...."Look Fred it's a white one".

Look at it this way.....when they come down here with their 'buddah
bags' and long hair with all them thar pretty ribbons, we can save them
for the wife to gussey up with on Saturday nite. Hee Haw.....Boy will
those boys have a surprise. Right Fred?

Dan/W4NTI....ALABAMA. The craddle of the Confederacy.

Anon, you gave yourself away as to who is subject to "delusion" with the following statement. Anyone who believes that removing guns from the hands of law-abiding citizens will reduce violent crime is not only delusional, but just plain stupid. It follows logically that criminals ALREADY have no respect for the law and, therefore, will continue to have guns. Anon *really* thinks that such a thing will cause criminals to just hand in their firearms! ROTFLMFAO! I am not laughing at crime, I am laughing at Anon and the blind adherence to those bleeding heart, el pinko ideals which he holds so dear. Not only that, but such a law will only make otherwise decent, law abiding citizens criminals because they *won't* voluntarily surrender the ultimate and last resort protection they have against criminals for whom said liberals' pinko hearts bleed so freely. AW, those poor, poor robbers and murderers sitting on death row awaiting a fate they don't "deserve" because it is cruel and "inhumane". Why, that old *bad* merchant that makes an anti-commie profit on his wares "deserved" to have his throat slashed or to be shot in cold blood. The poor, poor criminal was "abused" as a child and is not *responsible* for his actions. He came from an "underprivileged" neighborhood and "deserves" to *share* the wealth he was not willing to produce for himself with an honest day's labor. Never mind the woman who was brutally raped and scarred for life. I have NEVER heard the damned liberals' hearts bleed for them, the victims of filthy, scummy trash who prey on innocent people. You know, the ones who go out day after day WORKING for what they get, paying taxes, and con-TRIB-uting to society instead of leeching on the innocent. NO! One hundred thousand times, NOOOOOOOOOO! NEVER! NEVER surrender guns! EXPAND concealed carry laws. Give law abiding citizens MORE ability to protect themselves from the liberals' most ardent fans--the oppressed, poor criminals. I would like to see MORE criminals blown away by people tired of victimization--like the one caught on camera and shown on TV recently. A guy comes in a store, attempts to rob the guy with a pistol. Store clerk pulls out a .45 and literally blows the guy 6 feet backwards! Clerk not charged with anything. THAT's what I'd like to see more of, or see criminals hanged, shot, placed before a firing squad, or sent to the sizzle chair! Enough of this "poor old criminal" sh**!!!!!

Yes! Every citizen should pack some heat. It keeps the criminals
and the gov't in check.

Ummm. But FBI and Justice Department statistics reveal that the greatest number of murders are comitted by ordinary citizens who know one another -- usually a neighbor or family member. Gun related deaths are caused by so-called "law abiding citizens" in much greater number than any other cause.

> that criminals ALREADY have no respect for the law and, therefore, will
> continue to have guns. Anon *really* thinks that such a thing will

But see, Jerry, it ain't the criminals which are murdering most of the law abiding citizens. It is Aunt Matilda, or Little Johnnie, or the nasty neighbor next door. It is precisely those people from whom we need to take away guns.

> cause criminals to just hand in their firearms! ROTFLMFAO! I am not

Oh yes, the ignorant frequently roll on the floor. Especially after their kids show up at a place like Columbine and use grandpa's guns to murder innocents.

When you Get a Clue (TM), then come back and lecture me.

That Pitbull really has a dishonorable discharge.......He rapes babies and then burys them in his back yard. Don't let him lie to you, according to his military records, he caused the deaths of many of his fellow US servicemen because of his bungling. He has the deaths of hundreds of his own platoon on his head. After all, Pitbull just barely finished high school with a "D" average. He was given the choice of service in the armed forces from a criminal trial judge. It was either serve or spend time in prison.

> And yes, I do have one of those extras. Look it up.

I have one, too. I got it in 1984 when we had to be tested by the FCC
directly. Enough of the good old days.... :-)

I think license class would be a better measuring stick and a superior
justification for privileges if it were based on what one DOES WITH their
license rather than - or in addition to - how much one knows about
mathematical formulae that can be easily applied by software (ie Smith
Charts and the like).

Some more involved awareness of technology could be mixed into the criteria
for "advancement" as a ham operator and would undoubtedly make some small
contribution to the "technical expertise" justification for the continuation
of the amateur service. But brain-bending theoretical knowledge is not a
primary or even a necessary part of amateur radio.

I think if we look at the "Basis and Purpose" portion of Part 97, however,
we will find that it mentions a reserve pool of trained "operators" and not

just radio repairmen. OPERATION does not involve the kind of technical expertise that is required to design and fabricate integrated circuits or to write computer programs to handle digital communications. It does provide the opportunity to make amateur radio useful to our communities instead of mere entertainment for us hams.

-Dave, NF2G

John with all do respect, Prof. Gary Kleck's study disproves the rhetoric you have posted. This is a subject that has been posted many times with no convincing either side to change there position. I would like to make one statement for your consideration.

Gun control is liberal speak for African-American control. The largest group of gun toting criminals in the large population areas are Black. The liberal mindset cannot bring themselves to state that fact. So they take the tact of removing guns from all. We out here in "fly over" country have no such problems as we are interspersed with blacks and they are our friends and neighbors. They correct their children and in most cases are a family unit. There are no gangs of hoodlums roaming the area and gun control is not an issue.

Black intercity youths kill people with guns - take away the guns from everyone.

CBers use illegal amplifiers - remove the amplifiers from hams.

Same approach to the feel good laws that have zero effect on anything.

2790. Politics at its ugliest

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-09 22:39:21 UTC
From: 23skidoo <23skiddoo@house.com>
Message-ID: <twyY5.128902$U46.4348047@news1.sttls1.wa.home.com>
Source record: 98107

This presidential race should be an eye opening experience for the America to see just how ugly politics really is. We have two LOSERS - Gore and Bush who used political pull to get themselves their respective parties candidacies. The votes were relatively 50-50, about the same odds as tossing a coin. Now we see that it all comes down to Jeb Bush's state - the one he "promised to deliver" to his brother Dubya. Through out it all, Gores camp wanted all the votes counted, but Dubya's camp has used all of his daddies political power and money to stall the recount while he still has an imagined majority. The Republicans are crying that Gore is trying to 'Steal' the election by actually using the vote count. When it looked like Dubya might win, Jeb had his legislature convene to elect a republican slate to give the state to his brother regardless of the court decisions. This means that in Florida your vote was meaningless - It is the legislature who is going to flim-flam the state for Jeb's brother. I believe that Dubya will be the next president, and will go down in history as having to enter through the back door through dirty politics. We all lose - dubya has no leadership abilities, knowledge of government, or desire to learn. His administrative style is as it always was - delegation - Use daddy's advisors to make all of the decisions while he does all the smile for the camera stuff. Leaders who delegate EVERYTHING are not leaders at all, just empty suits. Gore isn't clean either, but at least he has a spine and an idea of how politics run. For all you who have previously whined about Gore not having anything to do as the vice president , you need to find out exactly what the VP does. Not to mention that he was a congressman for 15 + years as well. What has Dubya been ?? A RICH OIL MAN

Sorry, I meant to say self appointed arrl corporate policy yes-man. You defend the Boards damaging policy and money grabbing moves every chance you get. Guess you got to keep that paycheck comming in by making the ARRL BOD look good when they're shafting the service. You just wait and see what the arrl proposes thirteen months from now and I'll bet you'll be the first one here to tell us it's a good thing.

You remind me of the current spin meisters in the election controversy.
No matter what the FBI and Justice Department say, you will go on
quoting rather obscure "authorities" to try and justify your position.

You also try to play the race card. Shame on you. Race has nothing to
do with what I posted; only the FBI annual crime reports were being
discussed by me.

And those reports say that the vast majority of murders are comitted by
relatives or acquaintences.

Period.

No amount of rationalization will get rid of that fact either.

I have the major law enforcement agencies on my side; you have some
person whose claim is that he can be called "Professor".

Next, you'll be telling me that you believe that folks are getting
abducted by the inhabitents of flying saucers. ...

Look. I know that you're bitter because I refused to have sex with you
the last time we were alone, but that's a choice I'm allowed to make!

Besides. The last two times we were together I wound up with a sore
derrier. It was quite painful!

I didn't want to bring this up at all, but you forced me to.

Go over to the CNN website and look at the "Florida Vote Count" box about 4 inches down on the right. The certified lead for Bush was 537 prior to the court ruling. After the court ruling, with the 383 votes for Gore added (but no votes for Bush added), the count sits at a 154 vote lead for Bush. The court did not add any of the votes Bush gained during the recounts, only the votes that Gore gained.

Thanks for the correction, KB9WFK. At first I was wondering if I was mistaken about what I heard also, but I verified the infomation by looking at the statement, and actual written ruling (all 70 pages of it), before posting. Indeed, I was hoping this was a simple oversight by the court, however as time passes without a correction, it appears not to be an oversight they intend to correct.

Yea, right. Jeb got those two judges (both Democrats) to rule in
favor of Bush yesterday, but the Democrats on the Florida Supreme court
to vote for Gore. And now you're suggesting that Jeb was even able to
get the United States Supreme Court to stop the recounts. Your argument
doesn't even make sense, skidoo.

> Through out it all, Gores camp wanted all
> the votes counted, [snip]

Bullsh*t!! They wanted only the votes counted that might help Gore
win the election - to hell with the rest of the votes state-wide and nation-wide.

> When it looked like Dubya might win, Jeb had
> his legislature convene to elect a republican
> slate to give the state to his brother
> regardless of the court decisions. This means

Nonsense. Jeb had no say in the legislature's decision to exercise
its authority under United States law. And the legislature was elected
by the residents of Florida - all of the residents, not just those in
districts which voted heavily for Gore.

But you are right about one thing, your subject header - your comments
are "politics at it's ugliest."

And therefore they pose absolutely no threat to me or my family (I don't know those relatives or acquaintences, and our relatives and acquaintences are not trying to kill us). So, that leaves random criminals (like the two black men who walked into a store and killed my brother ten years ago) as the greatest threat to my life, and to the lives of my family.

Take guns away from the random criminal. If you're not willing to do that, then leave law abiding citizens with some way to protect themselves.

Tell me....this Liberal ability to detect when someone is going to shot
a relative or the 'nasty neighbor'....where does it come from? Is it
the same ability you have for 'divining voters choices' by a scratch or
a dent or a mark that you need a magnifying glass to see?

Just curious.

And BTW as far as I'm concerned we need to supply more guns to the inner city trash drug users and sellers....let them wipe each other out.

You mean a presidential pardon like the Republican President Ford did
for the former Republican President Nixon?

Very possibly true, and very possibly BS. And I think its a great idea
to use 'Daddy's advisors'. I'll bet he don't get a blowjob in the oval
office. I'll bet he don't provide missle technology to our sworn
enemies. ANd another good thing....if any of the Supreme court judges
decide to retire....well it won't be a flippin Liberal.

So there are plusses. And guess what....we won't have to be reminded
of the most discusting administration to ever be in the Presidency by
seeing his protegee...ALBORE.

Speaking of the "recounts...etc". As I recollect it was a 1700 vote
lead. Then reduced by various inventive hand counts. And did you
notice that one county in S. Florida re re re re re re-counted again
and with 4000 votes counted, Bush gained 58. My oh my.

Hopefully the Supreme court will rule as it must, follow the
Constitution and the Laws of the land. Unlike the Florida courts.

Think that thru one more time, Fred. Bush is going to have to work with a Senate that is Strom Thurmond's pulse rate from being Democratic and virtually certainly will be in two years. Similarly the House, if history repeats, will be Dem in two years. If Bush has any idea of working with these people, getting Clinton off the plate is probably a wise move just as getting Nixon off the plate was a good move for Ford. Bush needs partisan rancor like Custer needed more Indians. As a peace offering to the Dems, it would be hard to beat. There is no guarantee Clinton would take a pardon anyway because it is essentially a guilty plea.

It is Gore who would be powerless, effectively, to do much for Billy Jeff. While I do not think Gore could govern at all, a Clinton pardon would guarantee it.

As someone said, politics makes for strange bedfellows. In the long run of things, it is probably better to let Clinton retire to playing golf with O.J. Simpson.

Dick

Yeah right - Jeb has been lily white - you seem to miss that it was the Republican Appointed US Supreme court judges that stopped the counting BEFORE Dubya's legal team completed their filing - WHY DO THEY WORK SO HARD TO KEEP THE VOTERS FROM KNOWING WHAT THE ACTUAL VOTE TALLY WAS IF THEY HAVE NOTHING TO HIDE??? BullSh*T in deed, and it is coming from the man in Texas who allowed big business to RAPE Texas and has sold his soul to be president so they can rape the entire US.
The obvious facts that you seem to always shove under the rug is that Dubya had the option of a recount request as well and he chose not to. Maybe it was because the republicans have slimed the results and a total recount would expose them ?? Gore was willing to have a complete recount but Dubya nixed that one right off. Spin it all you want, but the bottom line is Gore won the popular vote in Florida and the rest of the US and Dubya is preventing it from becoming public. All's fair in love and war ?? yeah, right. Big money buys this election - and the free use of the US as long as Dubya stays in power - which should be about two years - then the Senate and Congress will revert back to Democratic control. unfortunately Alaska's National parks and wilderness will have been despoiled by oil companies and the 4 trillion dollar social security fund will have been "placed" in the hands of loyal republicans to invest for our [their profit] future. No telling what the national debt will be either - probably triple or more the size it is now.

Randy,

Stacking of antennas is not a trivial exercise. It is pretty much beyond the
scope of an Internet forum to educate you adequately on this subject.

You should acquire a good antenna book (e.g. ARRL Antenna Book) and do some
study. You can get some good answers to specific questions in these forums,
however, you can get an awful lot of misinformation too, as can be demonstrated
by some of the other answers to your query.

>
>Let me see if I understand if I "stack" 2 2MCP22 antennas each having 16db gain
>would that give me 32db gain??

Alas, it should be so. In theory, you can gain 3 dB by doubling the size of the
antenna ("stacking" two like antennas). In practice a better rule of thumb is
to figure on 2.5 dB.

Wes

One more thought on the subject of pardoning Willie is that the man (?) himself said he would NOT accept a pardon. Now.......is he going to stick by this statement or is he going to do his usual routine of lying out of it like he does so well. Don't forget too that he has trained Gore to do likewise.

Cry me a river. If you don't like what I post, don't read it, FOOL.

There are plenty of books via the ARRL on EME..in particular the ARRL
Antenna Book has a detailed chapter on that particular subject.

Yup. I'm in there - gotta renew in 2004. This summer I marked 30 years as an
Extra. Hopefully I've got more than 30 to go.

Notice the peaks - lots of Extras in 2003-2004, and again in 2006-2007. What
does it mean? I'm not sure, but remember that when you get a vanity call, your
license is renewed even if there are years to go on its term. Modifications,
such as address changes, don't get renewals unless you're very close to
expiration. (This is done because the vanity call fee is for 10 years, and the

FCC doesn't want the hassle of prorating it).

Betcha 1993-94 and 1996-97 mark changes in the vanity call program.

73 de Jim, N2EY

(that call was issued in sequence in 1977)

>t finally has occurred to me why the Left is fighting so hard for Gore.

What about Ralph Nader and his supporters? Nader's the reason this election is so close, but nobody mentions him. He's certainly on the left, whatever that is.

Many recent presidential elections have been decided by third party candidates, whose presence drained off support from a popular candidate. John Anderson in 1980 - Ross Perot in 1992 - Ralph Nader in 2000.

>Bush will not give Clinton a presidential pardon...
>
You mean like Ford gave Nixon?

Nixon was never convicted of anything, but was pardoned of all crimes by Ford. This meant that if it had turned out that Nixon had committed murder, treason, or practically any other crime, he could not have been prosecuted. End result was that all investigation against him ended.

Nixon and/or his supporters played "dirty tricks" that made anything since look tame. Some of his supporters went to jail - but not RMN. "Watergate" marked a turning point in American politics and public cynicism.

The ironic part of the whole thing is that Nixon was so popular in 1972 that there was no need for the "dirty tricks" at all.

The FBI and Justice Department will be singing a different tune after
Bush is elected.

> And those reports say that the vast majority of murders are comitted by
> relatives or acquaintences.

That is no good reason to take away the 2nd Amendment.
You manage your house and I'll manage mine.

> No amount of rationalization will get rid of that fact either.

Magnitudes more people are killed by automobiles than by guns.
What do you advocate doing about that?

> I have the major law enforcement agencies on my side;

To bad you don't have The Constitution on your side. May I suggest
you find you a country without a 2nd Amendment and leave mine alone.

very good advise wes
he will also need a good mast mounted preamp and also understand that EME is ONLY CW not voice
its not like working any of the satelites which most of them are easy and using voice
i hope randy does a bit more reseach before he starts spending large amounts of money on antennas

You still here... ?

> SNIP
>Through out it all, Gores camp wanted all the votes counted, <SNIP>

They don't want to count anything, they want the appearance of a count while their minions are busy working their "magic" on the totals. And if they can't acheive this, then they will fall back on plan two, and try to disqualify enough votes to achieve their desired outcome. Apparrently, the courts have seen through this smokescreen too.

>SNIP
>When it looked like Dubya
> might win, Jeb had his legislature convene to elect a republican slate to
> give the state to his brother regardless of the court decisions. >SNIP

Now that one really made a lot of sense ? If you meant Bush might lose due to tally manipulation by the Democrats, then what Jeb did was ask the Legislature to perform their legal Constitutional duties - neither the people or the courts have any authority to determine the manner of selection of Electors, the State Legislature does.

>SNIP
> For all you who have previously whined about Gore not having anything to
do
> as the vice president , you need to find out exactly what the VP does.
>SNIP

That's what several congressional and legal bodies have been trying to do for the last several years.

>SNIP
>Not to mention that he was a congressman for 15 + years as well. What has
Dubya
> been ?? A RICH OIL MAN >SNIP

Yep, Gore has never held a real job, the taxpayers have paid his salary all his life. At least Bush is more educated, with degrees to prove it. And, unlike Gore, Bush earned his money on the open market, not out of the taxpayer's pockets. I would much rather have a President who knows how to turn a legal profit, than one who only knows how to tap the donations of the Chinese, and the taxes of the common folks.

The biggest fear that Clinton(s) and Gore have is that they might become regular citizens, then all of the lawsuits and prosecutions will finally catch up with them. Gore needs the election to pardon Bill Clinton, and to pave the way for Hillary, who will then pardon him. By then, Chelsea (sp) will be stepping in - if the country survives that long.

>SNIP

Good, that means that whoever they shot had it coming, otherwise they would
be classified as criminals, not "law abiding citizens" .

A Federally funded study by Criminologist Gary Kleck (Library of Congress
ref.)estimated that between 1,500 to 2,000 self-defense and justifiable
homicides by civilians - and 300-600 by police - occur annually.

Since "law abiding citizens" account for approximately three times as many
criminals being dispatched as the Police, then logic would dictate that if
citizens were not armed then the crime rate would increase by around 300%
annually.

Better than that, how about a quote from a recent opinion (case law) of a Florida Supreme Court Justice (note "the only remedy authorized by law") :

HARDING, J.,

"Clearly, the only remedy authorized by law would be a statewide recount of more than 170,000 "no-vote" ballots by December 12. Even if such a recount were possible, speed would come at the expense of accuracy, and it would be difficult to put any faith or credibility in a vote total achieved under such chaotic conditions. "

There is NO service manual, but the Instruction Manual 68P81045E70-A is available

from Motorola.

I have several of these MITREKs for use in repeaters.
Beware! The PA's seem to have a designed failure.
I've had 3 fail so far, all of them began with a spur, and ended in catastrophic
failure.

That's a SAFE bet for sure. Any organization that still
uses the 60+ year old "message traffic" method for exchanging
information in 2001 is out of their minds. Now I know just why at
a recent CITA meeting I attended ham radio is reffered
to as the "cloistered amish" of the information superhighway.

You sure are. The REAL race card is played every day by the likes of
Jesse Jackson and Al the Pal Sharpton. And Al Gore etc. They depend on
keeping the minories at odds with everyone else, for Jackson's and
Sharpton's own gain.

So just what "organization" do you refer to? ARRL? They don't handle
traffic, just magazine subscriptions and the money. Individual hams are
about as un-organized as hunters or motorcycle riders, with a few loose
clubs serving as about the only formal "organization" around. So how
would you prefer to handle "message traffic" that is going to many
diverse destinations? You want us all to pony up and buy a military
style secure AVINT thingy?
Yeah, right. Our disorganization and wide dispersion is actually one of
our strengths.

Now I know just why at

Jim,

That is something that has bothered me for all these years. Nixon's popularity was high, we had just gotten un-entangled from Viet Nam--and I am fully aware of the events that followed in '75--, and yet, he crashed and burned by essentially covering up and becoming a willing(?) accomplice. I have always wondered WHOM *may* it have been that had something *else* on Nixon not known to the public? Had Nixon allowed one, some, or all of the Watergate perps to take a fall, could it have been that *something* else may have taken him down? Would that *some-one* have sung some unflattering song about Nixon, and was it this "tune" that could have caused Nixon to protect, cover up, and untimate-ly resign? I don't, of course, have a clue. But, again, given that Nixon *was* popular at the time, it just didn't make sense to do that, at least, to me. Was he actually THAT dishonest? Was he THAT inept that he couldn't make a correct judgement about how to proceed in the matter? Or, did he, at first, not realize the seriousness of the situation? Underestimating the importance of the matter, did he, in the beginning, attempt to "help those who had helped him" out of a bind only to find that he was hemmed in a corner and it was too late to change course? Or, did he personally, or tacitly, *know* beforehand about the matter and, indeed, give approval? The years have dimmed my recollections about Watergate, but it was never, in my mind, *clear* whether he actually knew about the break in, et al, or mistakenly tried to cover it up as a minor embarrassment--hoping it would go away. I am sure I will be regaled with "reminders" from readers about how "evil" Richard Nixon was, but I really am looking for references, books, etc. as to what *REALLY* took place as to Mr. Nixon's involvement. The years have taken away the lustre and replaced it with a dull finish! LOL! I'd just be grateful for reasoned enlightenment.

Tnx

Jerry

Yep, I'm still here, and you are, as usual, snipping out most of the pertinent facts (such as Dubyas rape of Texas) and spouting typical republican smokescreen rationale.You are a little person - just as I am , and we exist in the republican mind ONLY to be their minions so they can get richer. Get over it - we don't count in their book - Our votes don't even count. Their lawyers will see to that. Buy into the crap that hand counts are flawed - which they aren't, and you will be numbered in the few who actually believe that OJ didn't kill Nichole and Ron. [These folks are also known as sheep BTW]Yes - Dubya's daddy bought him many degrees in many different schools - but they are just pieces of paper - He has shown ZERO accomplishments other than what daddy bought for him. What about the fact that between Dubya and Chaney they have 5 arrests between them ??? Makes them upstanding citizens in my book. As for what the Vice President really does - take some time to look up his duties - not just try to blow it off.

Now that we have seen both extremes in this one message, maybe more rational people can find a spot in the middle.

When you get one from the left, and one from the right, playing "Ain't it awful" at the same time in goes from the sublime to the ridiculous

If anything threatens Amateur Radio, it is people who instead of operating what ever mode it is they champion, get on the internet and lament the future of amateur radio.

Too Late Dan!
With that response you gave earlier, it shows that you are probably one of those OLD timers that had to go before an FCC examiner back when Morse code was the ONLY mode of communication around! I don't think YOUR grey matter can handle a complicated question such as high speed bursts, EME, packet, SatCom, APRS, etc! When the rest of you OLD die hards pass on to the Ham Station in the sky, you can take your stubborn Morse code with you. It's only a matter of a couple of years and the REQUIREMENT or Morse code will be abolished!
See if your grey matter can understand THAT!

Well, I think the jury's still out on that one Noel.......

After an initial surge of new licensees in the USA (I see you're from England) under the No-Code Tech provisions, new licensing (whether with or without Code @ 5wpm) has dropped off to approximately the same levels (or less) that we saw before the advent of a No-Code license here. IMHO, even if we did away with the Code provisions of H.F. licensing (an event that may be coming down the pike in another 5 or so years), we'd see about the same thing........ an initial rush of new applicants for 6 months to a year, and then the same slow decline in overall amateur numbers.

As Fred posted.... the decline in amateur numbers has little to do with licensing requirements and far more to do with other hobbies/distractions available today (computers, internet..etc).

Besides..... the old brigade (your words) are gonna be around for a long time yet... Most of the so-called newcomers to ham radio I've seen are in their 30's and 40's and many seem interested in earning H.F. privileges, 5wpm or not...... the teens of today just have too many other entertainment outlets clamoring for their attention to consider ham radio.... Nintendo, TV, MTV, the internet, pagers, cell phones..etc.... 5wpm Code has almost nothing to do with the lack of teens coming into Ham radio.

The Ohio/Penn DX PacketCluster
DX Bulletin No. 489
BID: $OPDX.489
December 11, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, NB1B, AI2Q, WB2YQH/ WB2RAJ & The 59(9) DX Report, K3BEQ, W3UR & The Daily DX, WB3JFS, K4VUD, KJ4UY, W4WX, AI5P, WA5PAE, K6IPV, K8YSE, CX6VM, DF4SA, DJ2PJ, DJ5AV & DX News Letter, DJ7ZG, F5PBL, G3XTT, IN3QBR, JF2MBF, LA4LN, PA3AXU, SM7CRW, UT5RP, UX2RY and VU2JOS for the following DX information.

1S, SEALAND. As of press time, there is NO sign of 1SL1A on the air from the "Principality of Sealnd". Operation was to begin on December 9th and last until the 12th. Also, 1SL1A was going to be active in the 10 meter contest this past weekend. Stay tuned!

9M6, EAST MALAYSIA. Don/K6IPV and Dave/W6AQ will operate from the Hillview Gardens Resort club station, 9M6AAC, a few days before the ARRL CW DX Contest in February 2001. Their orginal plans were to be active from Layang-Layang in the Spratley Islands (9M0) for the ARRL CW DX Contest (February 17-18th). However, Don, K6IPV, informs OPDX that "Murphy's Law" has struck their operation. He states, "No sooner do we firm up our arrangements and announce our trip to the Spratleys (9M0) but we find that the island has 'been closed for repairs'! It will reopen on March 1st, too late for us. We're rapidly putting together another potential side trip from Hillview Gardens Resort and 9M6AAC. We still intend to operate from there and may operate the contest from there. Further details to follow in the next few days." Stay tuned!

A5, BHUTAN. By the time you read this, Charly's, K4VUD, A52UD operation will be coming to a close (December 12th). Yani, 9M6US, has QRTed his operation as A52AP last week. Earlier in the week Charly reported on some interesting details on his trip to A5. Here is an excerpt from his E-mail message: "Arrived Thimphu Bhutan Ham Center after airplane routing problems from Frankfurt to Bangkok. Someone in India is now using my laptop computer, Heil footswitch, and many other things stolen out of my suitcases while in transit via India! So, hand logging all the way. Also, bags were delayed (to give time to really steal all the good stuff) so I had no earphones for

a while... that made pileup management even more difficult. Now, I have my Heil and squeeze key so will be a little bit better for you guys. Was sending with the buttons on the ICOM mic for a while! The Sophun Ham Center in Bhutan is GREAT... several rigs, three linears, and A-3S up 30 ft along with dipoles. Jani (A52AP) and I strung a beverage south, and put up an inverted L resonated in 160m. The WARC A-3W goes up this afternoon. The hotel is supurb with lots of beautiful finished wood and Bhutanese decoration. Food is great, too. Recommended....5 stars!" Remember to QSL A52UD to K4VUD and A52AP to N2OO.

CARIBBEAN TRIP (J6/J7). Tom, LA4LN, will be operating as J6/LA4LN (or a separate J6 callsign) from St. Lucia, December 14-28th, and as J7/LA4LN (or separate J7 callsign) from Dominica, December 28th through January 4th (2001). He states that his licence applications were filed along time ago, but licences will have to be picked upon his arrivals. Tom will be on the radio when time permits, using an Icom IC-706MkII transceiver and wire antennas. He will be equipped to operate all HF bands from 160-10 meters, plus 6 meters. Activity will mainly be on CW with some RTTY possibly. His suggested CW frequencies are: 3505, 7005, 10105, 14025, 18073, 21025, 24895, 28025 and 50105 kHz (all +/- QRM). 160 meters will be tried if the noise conditions make it possible. There will be split frequency operation when needed. Please QSL DIRECT to LA4LN's home address at: Tom V. Segalstad, P.O. Box 15 Kjelsas, N-0411 OSLO, NORWAY.

CX, URUGUAY. Jorge, CX6VM, reports that he is active Monday through Friday on 12 meters (around 24897 kHz) and on 17 meters (around 18073 kHz) between 1030-1200z and between 2130-2330z. During the weekends he will be on more on these bands. Jorge's station uses a Cushcraft R7000 vertical and 100 watts. QSL ONLY DIRECT (please) to W3HNK because he is having trouble getting cards from the bureau. W3HNK's address is: Joseph Arcure Jr., P. O. Box 73, Edgemont, PA 19028 USA

D6, COMOROS. Don, G3XTT, sent out a press release this past week and an update on the forthcoming "Five Star DXers" D68C DXpedition to the Comoros to be active about Febraury 8-28th (Complete press release will be provided to all OPDX InterNet Subscribers as an additional bulletin). In short, they state that they will be the "biggest DXpeditions of all time". Some 3000kg (3 metric tons) of equipment has been shipped and 28 operators are signed up to participate (some will be there for the whole of the period, some for part of the time). Three new members have been added to the team: Jens/DL7AKC, John/N7CQQ and Victor/UT8LL. A container of equipment was shipped on the "Julius Oldendorff" ex-Felixstowe (UK) on November 30th. It's a 20 foot container and is about three-quarters full - there is around 20 cu. meters of kit with a total weight of over 3 tons (3,000 kgs). In the container there are 10 transceivers, 9 linears, 4000 meters of coax, 1600 meters of control cable, 6000 meters of radial wire, 9 Yagi antennas, 11 masts, Four-squares for 40m and 80m, Verticals for 30m and Top Band, 64+ heavy guy stakes, 11 lap-top computers and 1 generator etc etc... Their activity will be on all bands including the WARC bands and also an entry in the ARRL CW DX Contest (February 17-18th). For more details, check the D68C Web Page which continues to be updated

with the latest news. The Web address is: http://www.dxbands.com/comoros

EA8, CANARY ISLANDS. Look for Alan, G3XAQ, to be active as EA8/G3XAQ from December 21-28th. Hie activity will be mainly on CW.

EN23, UKRAINE (Special Event). Just a reminder that on December 15th, the Ukraine Unit-III of Chernobyl Nuclear Power Plant (CNPP) will be closing. During December 14-16th a group of Ukraine operators from the town of Slavutich will activate the special callsign EN23RW. A special full colored QSL card will be available for making contacts with EN23RW. QSL direct to UX2RY: Andre Asriyanz, P.O.Box 14, Slavutich-3, Kiev obl., 07100, Ukraine, or through bureau. The log will placed on the following Web page at: http://www.radio.cn.ua

EP, IRAN. Mohsen, EP3SMH, has been very active over the last week on 15 and 20 meters. Activity seems to take place between 1230 and 1800z (with some activity as late as 2000z on 40 meters SSB working JAs). QSL via Box 17665-411, Teheran, Iran.

HB, SWITZERLAND. George, N2APB, will be spending the next week here on business, but will also be bringing along some QRP gear. He will be signing as HB/N2APB. George will be working on the QRP frequencies on 20/30/40 meters. Also, he will be bringing his portable PSK station to work 20 meters PSK. He hopes to be operating on Mon, Tues, Wed and Fri during 0200-0400z. Here is the interesting part as George states, "On Thursday, I'll be taking a train up into the Swiss Alps which will end close to the top of Eiger Mountain. (Remember movie 'The Eiger Sanction' from years ago, starring a young Clint Eastwood?) There's a restaurant up there at 11,000 feet at which most normal people have lunch and look around for a couple of hours. I, however, being of not-quite sound mind and body, will be outside in the sub-sub-zero temperatures and low-oxygen air working my Portable PSK (controller & PSK-20 in a box, no computer) with a St. Louis Vest Pocket Vertical antenna (featured in recent QRPp and QHB). The time for this should be around 1200z on Thursday. Hope to work some of you guys! (Hope I make it back down, unfrozen.)"

IOTA NEWS.....
EU-098. Look for DH3ZK to be active now through Decemebr 17th from Poel Island. DX stations please listen on 14260 and 21260 kHz, and Europe on 7095 kHz. JA stations listen between 0900-1000z on 21260 kHz.

NA-140. Look for K3RE to be active from Smith Island, Maryland (in Cheasapeake Bay). The reference number for the USIA is MD-030S. This activity will be from December 16-17th, (1700-1700z, 24 hour operation). Suggested frequencies are: 7260, 3860, 14260, 21260 and 28460 on SSB and .040 on CW. QSL to K3RE (USA stations SASE and stations outside the USA - SAE, 1 Greenstamp or appropriate number of IRCs.).

JT, MONGOLIA. Naranbaatar (Naran), JT1BV, informs OPDX that he has been active around 28475 (+/-10 kHz) at about 0100-0300z for the USA and at

about 0800-1130z for Europe. QSL via direct only to: Mr. Naranbaatar T, C.P.O Box 820, Ulaanbaatar-13, MONGOLIA (via JAPAN).

KG4, GUANTANAMO BAY. Bill, W4WX, a member of the Florida DXPedition Group, will operate from GTMO as KG4GC from December 12-18th. Bill will concentrate on RTTY and 6 meters. QSL via bureau or direct to his home callsign W4WX.

QSL INFO AND NEWS.....
Dennis, NB1B, a USPS Postmaster, reported on some more postal increases this week. He was able to verify that the cost of IRCs will go from 1.05 USD to 1.75 USD on January 7th. The 1.05 USD sounds like a bargain right now! Dennis was also able to verify that, as of that date, IRCs can be exchanged for 80 cents worth of stamps or other postal products - no cash refunds. For an airmail letter, 1 ounce to anywhere in the world will be 80 cents (except Canada and Mexico which is 60 cents).
A 2 ounce airmail letter, however, will cost as follows:
1.60 USD for Rate Group 3 which is mainly Western Europe, but not totally.
1.70 USD for Rate Group 4 which is Japan, Australia, and New Zealand.
1.55 USD for Rate Group 5 which is the rest of the world.
More details on the U.S. postal increase can also be found on the web at: http://www.usps.gov/news/2001rate.htm
The rates are at the bottom of the page.

Manu/3DA0AE and Norby/3DA0AD are the callsigns that were granted for these two to be active from Swaziland. They participated in the ARRL 10 Meter Contest this past weekend. QSL to LX1NO.

John, SM7CRW, was active in the ARRL 10 Meters Contest this past weekend from Oland Island (EU-037 for IOTA awards) as 8S7A. The Island is new for the "World Heritage List" (001112). QSL via W3HNK.

Con, DF4SA, who was active as 9H3MM in Malta during the CQWW CW Contest informs OPDX that all QSOs will be confirmed through the bureau via DF4SA. If somebody still wants to send direct, please only QSL to the following address: Cornelius Paul, Adelberger Weg 3, D-73104 Breech, Germany. QSL cards will be printed next month (January/2001).

LOG STILL OPEN! Fred, K4MPI, who operated from Taiwan as BV1US from July 1959 and June 1961, and made about 20,000 QSOs, states that folks can still request QSLs from his current CBA address.

Please take note! There is a new QSL Manager for CO8DM. QSL now via DL9US. CO8DM's former QSL Manager, DL5DSH, has become a "Silent Key" last week at the age of 37 leaving behind a family with two young children... OPDX sends out our deepest sympathy to DL5DSH's family.

Rick, AI5P, announced this past week that the AI5P/CY9 and FP/AI5P QSLs have arrived, and he is currently sending out the direct cards. All bureau cards will be answered via the bureau.

The recent operation of GJ2A during the CQWW CW Contest should be QSLed to: JARS, PO Box 338, Jersey, United Kingdom, JE4 9YG. Some sources

are stating to QSL via MJ0BJU (Anne). This is OK, but may take longer due to Anne not being on the island for the next month.

Nob, JF2MBF, informs OPDX that the ZK1NDK (Penrhyn Atoll, N. Cook Island) log is now available on-line log at:
http://www.jm1szy.com/zk1n/index.htm
He also mentions that both ZK1NDK and ZK1NJC QSLs (5 kinds of full color QSLs) will be ready very soon.

T2, TUVALU (also possibly 3D2). The "DX Newletter" reports that Albert, HB9BCK, intends to be active as T20CK from December 28 through January 8th. Activity will be on 40-10 meters on CW/SSB (perhaps RTTY/PSK31) running an IC-706 into wire antennas. Perhaps he will show up also from Fiji operating as 3D2BCK two days prior/after the T2 operation. QSL via bureau to HB9BCK or CBA (Europe: 1USD/IRC, outside EU 2USD/IRC).

V4, ST. KITTS. Larry, KJ4UY, will be operating as V47UY from December 10-18th. Using an Icom IC-756 with an R-7 and A-3, he will be active on 10 meters through 40 meters. He states that he may use a dipole for 80 meters but NO 160 meter activity on this trip. The IOTA number for St. Kitts is NA-104. QSL to his home callsign, KJ4UY, at: Larry Wolf, 3528 Oak Grove Court, Haines City, Florida 33844-9298.

VK0, MACQUARIE ISLAND. This will be the last week to work Alan, VK0MM. He will be QRT on or around December 17th. Activity lately seems to be mainly on 30 meters CW and 20 meters CW/SSB. Check these bands after 0630z and again after 1100z. NO QSL ROUTE IS AVAILABLE YET.

VP8, FALKLAND ISLANDS. Rees, VP8DCD, has been quite active recently on 15 and 20 meters. He seems to frequent 21263 and 14260 kHz after or around 2300z. There seems to be some confusion on the QSL route for this one. Most sources say QSL via G0JLE, however, Rees has been stating on the air to QSL via P.O. Box 260, MPA, Falkland Islands.

VU, INDIA (Special Callsign). Jose, VU2JOS, mentioned this past week that the "Ham Radio 2000 Millenium" meeting is to be held in Hyderabad, India, on December 22, 23 and 24th. The station, using the special callsign VU2HR2000, will be operational during that time.

WHERE TO GO NEXT? Gerard, PA3AXU, states/informs OPDX the following: After my A3, 5W, ZK1/S and ZK1/N activities, I am looking for inputs from the DX community for my next years' stop in the South Pacific. Please submit your "wishes" through my home page at:
http://www.qsl.net/pa3axu/2001.htm

XW, LAOS (Also possibly XU). Mauro, IN3QBR, informs OPDX that he and Fabry, IN3ZNR, have received amateur radio licenses from the Laotian MPTC and will be active with the callsigns XW3QBR and XW3ZNR. Mauro will travel to Vientiane on December 18th and Fabry will follow him on the 24th. They plan to be on air the afternoon of the 27th. They will operate on CW and SSB mode, and possibly RTTY. Activity will be on all HF bands including the WARC bands. They will be looking for stateside stations, and will transmit in the "general class" portion of the bands. XW3ZNR will QRT

on January 5th and XW3QBR on the 8th. They hope to have a good signal on the air, but their power is limited at only 100 watts. Antennas are a tribander and dipoles. QSL cards are sure via direct or bureau via QSL Manager IN3ZNR: Fabrizio Vedovelli, Via Gramsci, 38100 Trento, ITALY. Mauro also informs us that he will travel to Phnom Pen after his Laos operation and will stay for four days. He states that he holds the XU7AAZ callsign, and it is possible that he will be on the air January 10th or 11th. More details are forthcoming about the first few days of the new year.

The Florida supreme court ruled that Katherine
Harris was legally wrong to reject returns filed after the deadline
imposed by that very same supreme court. At least this court is
consistent in flouting the law: it doesn't even respect its own decisions.
The majority, in effect, held that Katherine Harris was wrong for obeying
the earlier order of the Florida supreme court. It is hard to overstate the
devastating impact on the rule of law that occurs when a state's highest
court holds that state officials are incorrect as a matter of law when they
follow that court's earlier decisions.

Democrats have done their job well, pitting us against each other and creating the myth of entitlement and victim hood, which the slothful, greedy, envious, and self-centered are eager to accept because it gives them an excuse for their lack of initiative, commitment, character development, and honor.

My question is this: Do you think Nazi's collaborating with America is news?

Old as the hills. Been happening since before WW2. Who do you think got NASA off the ground? Where do you think we got a boatload of intel on the Russians after WW2? Those are 2 immediate examples that comes to mind.

Maybe when Algore improves the internet he invented I will be able to find some more.

Oh and by the way...Remember that facist witch Tipper wanting to regulate the content in records and tapes back in the mid-80's? It was a big senate wive's campaign. Frank Zappa trashed Tipper head to head on Nightline...he even made Ted Koppel crack up.

And who names anything but a cocker spaniel Tipper, anyway?

And more children are killed by swimming pools than guns, in spite of the fact the Reno shooting stats include deaths to the age of 20 as children. It is the inner city drug dealing, using, youth that commit the violent crimes. gun control is liberal speak for "Unlawful inner city black control".

I would suggest you read Gary Kleck's report which was derived from the FBI data. Kleck was an avid gun control liberal professor and as a result of his research changed sides.

Your arguments are based on the actions of inner city hoodlums with a few exceptions. One points to Columbine as the ultimate "ain't it awful". The fact is today's media society has aggrandized blacks and homosexuals while attacking traditional values. Is it any wonder that a group of youngsters denied a set of values, and being placed at the bottom of social acceptance because they are white males is cause for violence? If not, why are you so quick to act as an apologist for a black hoodlum because of his environment and deny the same criteria to the Columbine youths?

ARRL has a list of its benefits on its web page. If you don't think they are
of benefit to you don't join. It's really just that simple.

I like what Virginia did. They call it "Operation Exile". If you get convicted of having an illegal gun the mandatory sentence is 5 years, to be run consecutively with any other charge.

They have BIG signs at the state lines on major highways to advise you of this.

So far it has worked. Gun crime is WAY down in Virginia. Lotta people have gone to prison and a lotta guns are off the streets. It does nor hurt the 2nd amenment a bit, either.

You see, they are excercising criminal control instead of gun control. Good deal.

However, note the key words from your reply "proves..ability..to earn.."

What you say is true, but try to get a legitimate job in the real world and see what a difference it makes.

Algore is not a lawyer like most politicians (which, I admit, is a plus in my book), and has no college education. Unless he is given a token job by some liberal company, he will be hard pressed to compete in an open job market - although I suppose he can always just keep working for the Chinese.

Hey, maybe we will be able to get a "McGore" burger with cheese before long... :>)

To minimize the size of my post, and in the interest of minimizing
redundancy, I try to quote only the statements that I reply to.

> You are a little person - just as I am , and we exist in the republican
mind ONLY to > be their minions so they can get richer.

Yep, your right here. We are both just "little people" on the scale of
national politics. However, unlike you, I have no problem with the rich
getting richer, and I hope they do. The more money the rich make, the better
my portfolio looks.

> SNIP
> Buy into the crap that hand counts
> are flawed - which they aren't, and you will be numbered in the few who
> actually believe that OJ didn't kill Nichole and Ron.

Since you brought it up, there is a great similarity between the people on
the OJ jury and those who want to hand count the ballots. On one hand, a
jury was predesposed to ignore scientific evidence and find OJ innocent
because he was one of "their own".

On the other hand, we have groups of people who want to "divine" evidence to
arrive at a predesposed result because AlGore is one of "their own"

That's why I give no credibility to the validity of either the OJ jury or
the FL handcounts.

> SNIP
> What about the fact that between Dubya and Chaney they have 5 arrests
between > them ???

An interesting point- but just like the vote in FL, we would need to count
all of the people, not just a select few. I wonder what the numbers would
look like if we could assertain the total number of arrests by those in the
Democratic party vs. the Republican party ?

> As for what the Vice President really does - take some time to look up his

That's exactly what several legal bodies have been trying to do for many years. Hopefully, once the Clintons are out of office, they will be able to proceed.

2882. EOSS Balloon Flight Announcement

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-11 01:21:35 UTC
From: Rick von Glahn <rickvg@iex.net>
Message-ID: <NSo0OoerZ95Y+iTNBCPMq7T+i6H1@4ax.com>
Source record: 98050
Cross-posted to: rec.radio.amateur.space;,rec.radio.amateur.misc

Edge of Space Sciences is launching a balloon experiment next weekend.

We are flying our cross band repeater, APRS and some interesting
experiments designed to test the deployment of a balloon being
developed for use in exporation of the Planet Mars!

Help EOSS compete in the maximum distance DX contact category of the
Amateur High Altitude Ballooning Mission Records page located at:

http://users.crosspaths.net/~wallio/Records.html

Below is the text announcement sent out to our list server
participants.
For more information, check out:

http://www.eoss.org/flight/flight.htm

The expected footprint of the cross band repeater is shown on this
page and will help in determining if you will be able to participate
directly in this mission.

Also, APRS will be repeated to 144.390 MHz in the Denver area and
should be picked up by an I-Gate and forwarded into the national APRS
system on the internet.

Thanks,

Rick, N0KKZ

===begin flight announcement===

Flight Announcement for EOSS #46

EOSS #46 is on schedule and will launch at 9:00 am MST, December 16,
2000 (rain date December 17, 2000). The launch site is at Gene
Fatton's Ranch at Windsor, Colorado. The beautiful control room (AKA
sunroom) will once again provide a fabulous mission support facility.
EOSS asks visitors to this room to remove their shoes so we do not
wear out or soil our welcome.

Listen for the beacon on 147.555 and look for ATV on 426.25 MHz. The
flight should reach 100,000 ft. and the beacons should be heard in a
400 mile radius.

The RMRL Cross-band repeater (445.975/147.555) will provide a wide
range of operational fun. QSL cards will be sent to stations making
contacts through the RMRL repeater thanks to Mark Patton (Kï¿½YG).

This flight is on behalf of our ongoing Mars Micro Balloon Probe sponsored by Pioneer Astronautics. The objective will be to deploy a micro balloon on decent as well as to minimize "Post-Burst Chaos" on decent using a 1200 gram balloon ("grape") as a stabilizer.

This fight will use two helium balloons. The main lift balloon will be a 3000 gram balloon and will be cut away at 100,000+ feet. The second balloon or "grape" will be a 1200 gram drag balloon used to stabilize the payload on decent. It will be cut away after the Mars micro balloon is deployed. If successful, the drag balloon will be used in future Mars balloon deployments.

Friday night, December 15, Marty, WA0GEH will conduct the tracking and recovery net on 147.225, 8:00 MST. Logistics for the tracking and recovery operation will be discussed. Please plan to listen in or, if you are interested, joining the effort.

The Tracking and Recovery net will be on 448.450 MHz Saturday, December 16. Starting about 7:00 am logistic traffic will start to flow. This will be become a DIRECTED net, all traffic for the recovery effort will be directed through Marty, WA0GEH.

Visit our Web Page at: www.eoss.org for updated information and flight
histories.

++

Flight Profile for EOSS-46

LAUNCH DATE: December 16, 2000, Rain date is December 17, 2000
LAUNCH TIME: 16:00 UTC - 09:00 MST
LAUNCH SITE: Windsor, Colorado, Gene Fatton's Ranch
DIRECTIONS:
Leave Denver Colorado on I-25 north bound. Proceed to the Windsor exit (Exit
Number 262). Proceed East on State Road 392 approximately 1.3 miles to county road 3. Take county road 3 south a few hundred yards. The launch site
will be on the east side of the road. Numerous vehicles with antennae will
undoubtedly mark the spot.
LAUNCH SITE COORDINATES:
40.4744 Degrees N. Latitude
-104.9628 Degrees W. Longitude

EXPECTED TRACK: Between 80 degrees and 145 degrees azimuth

PRIMARY INTEGRATOR:
Pioneer Astronautics, Dr. Robert Zubrin, Dean Spieth, "Mars Micro Balloon
Probe".

PRIMARY EXPERIMENT(S):
This is the fourth of many planned EOSS flights for the "Mars Micro Balloon Probe" which will place a series of balloons in the Martian atmosphere. The objective of this flight are to test and develop inflatable gases from compounds that are normally liquids at Standard Temperature and Pressure (STP). The Mars surface pressure is simulated at 100,000 feet above sea level, thus the experiment on an EOSS balloon. This experiment will attempt to inflate balloons using various compounds. This will also permit a test of the deployment canisters required on Mars.

Additionally, a 1200 gram "Grape" drag balloon will fly to help stabilize the payload on decent while deploying the micro balloon. This experimental drag balloon concept will be deployed on Mars missions if successful.

Detailed information and project proposals can be found on the EOSS web site, www.eoss.org

CROSS BAND REPEATER: The RMRL cross-band repeater will be deployed. QSL cards will be issued for successful contacts through the repeater.

APRS: The packet callsign will be: W0WYX

NET AND OPERATION FREQUENCIES:

Preflight Foxhunter Net: 147.225 MHz Colorado Repeater Association, 8:00PM
the preceding night

Launch Site: Simplex 146.550 MHz

Telemetry: 144.340 MHz FM (1 Watt output). The Packet telemetry stream is in ax.25 format at 1200 baud and is readable in plain English for the most part. Included in each telemetry frame is an APRS position string (APRS users see note below). Every few minutes a CW ID is transmitted on this frequency.

Cross-Band Rptr: Input 445.975, output 147.555

APRS Output: 147.555 MHz, Output of Crossband Repeater

ATV: 426.250 MHz.

Tracking Team: 449.450 MHz Rocky Mountain Radio League (RMRL) (pending approval)
146.58 MHz Simplex Field Frequency

HF Net: 7.235 MHz, net control pending

Automatic Position Reporting System (APRS):

Some of the APRS systems aboard EOSS payloads will act as digipeaters. However, we request that only the Chase team use this system in order

to minimize the disruption to the packet telemetry. Chase team APRS info is used to assist in coordinating placement of the various DF teams.

Please disable your beacons on the EOSS packet frequencies, as that will minimize interference to other stations in your area trying to copy telemetry. Of course, if we are on the National APRS frequency, you should continue to beacon out your data as usual. WE do NOT want to interfere with 144.390 MHz traffic other than to add our balloon's location.

ATV

ATV is transmitted on 426.250 MHz. This is equivalent to cable channel 58. If you have a high gain 70 centimeter antenna, it may be possible to view the video on a normal TV. However, we only transmit 1 watt so you will need a very high gain antenna for this frequency.

2883. A few newbie querstions

Hello! Can you please help me out with a couple little questions? I have just begun to get involved with HAM radio, and can't wait to get my license. First, is there an easy way for me to aquire my license in the Phoenix, AZ area? Some classes, etc.? I have a pretty good sized book, with test questions in it and have been looking through that. The next couple questions are equipment related:

First, I bought a Yaesu FT-208R handheld to learn this all on and find it to be pretty handy. What is the maximum type of range I can expect out of this unit in a fairly flat terrain? I believe it's TX power is 5 watts??

Secondly, there is a dial on the top of the unit that has the following settings-- MS, +SET, +RPT, SIMP, -RPT, -SET . What do these functions do? Any help would be greatly appreciated! My wife and I will be moving back to native Oregon by Summer, so we want to get this all squared away before we head back there...

THANKS AGAIN!!

Jay

Just think how much time you could spend studying CW if you
would stop flaming and trolling.

Common sense is a lot harder to learn.

N8wwm wrote:

While he's at it, try for extra. Doesn't cost any extra(!) at the VEC
session.
He can guage his readyness at the practice site listed below in the quoted
post.

He will need documentation of some sort to prove he has the code done.
A "tech plus" license should be sufficient.

Jay
For your test or classes for your license. Look in your phone book yellow pages under Amateur Radio. It should list stores where equipment is sold they can direct you to the right people.
you might try the ARRL.org web site.
As for the knobs on your radio try the QRZ.com web site for manuals.

>

And that's only page one. Page two is that all those guntoting innercity gangbangers are *ALREADY* in violation of numerous laws- local, state and federal. Any additional law stating that citizens may not own or possess guns will be just as routinely ignored by each and every one of them. Hell they'll laugh and realize that the government disarming all those potential victims just makes their slimey life that much easier. No longer do they need to wonder whether the young lady they are considering as their next victim might have a .380 in her purse. If government at any level can't enforce laws already on the books it is sheer stupidity to suggest that adding one more will solve anything at all. Unfortunately stupidity that is rampant among Democ-RATS.

Thank you very much for the input! I am under the impression that once I pass the test, I file for the license. Is this true? Can I take the test at home, or is there a static location for testing (such as the local FCC office)?

I truly appreciate it all!

And when you're finished reading this bogas story, delete the "nazigop.htm" from the URL and check out some of the other pearls of wisdon from the person who posted this story. This self-proclaimed "comedian" claims Gore won florida by 23,000 votes, routinely trashes Catholics, calls Rush "pigboy," and has drawings of Bush (the father) doing a nazi salute. This site is hardly a source of honest, unbiased, information (about anything).

You live in a fantasy world - The government doesn't know what job duties the Vice President of the United States has ??? To quote Dwight - BULLSH*T. As for the rest - WHY do you think that ALL of the pages who work for both the house and senate are young cute little girls and [for those whose tastes differ from the rest of us] boys ? Of course, if you are a republican, you are merely giving them 'experience' in the world of politics while they are screwing them, but if you happen to be a democrat, you are condemned by all as a whore-monger. I pity you - you can't think for yourself - That's why you are a republican. When dubya's boys blow the hell out of our economy during their pillage, your portfolio won't be worth squat - But they will tell you its the democrats fault and you will believe them. Did your folks come from Germany ?? Mine did, and they wouldn't believe that the Nazis were doing "the will of the people" while exterminating the dreaded Jews, so they came to the United States. They felt the same way about the nazi's as I do about dubyas motives. But its a free country (so far, at least until the republicans legislate it out) and we are all entitled to our opinions.

What is wrong with Republicans in the United States Supreme Court overturning what Democrats in the Florida Supreme Court did? One is just as fair as the other (in fact, one is more fair since the election results agree). Besides, Gore has already had his fair and accurate recount - only you, a handful of Democrats, and a few members of the Florida Supreme Court, disagree with that fact.

> BullSh*T in deed, and it is coming from the man in
> Texas who allowed big business to RAPE Texas and
> has sold his soul to be president so they can rape
> the entire US.

You know, I was just down in Texas a few months ago, and it sure looked like Texas was doing alright to me (in fact, it is doing so well, I'm thinking of moving there).

> The obvious facts that you seem to always shove under
> the rug is that Dubya had the option of a recount
> request as well and he chose not to.

I have never shoved anything under the rug, skidoo. As I have said many times in this newsgroup, there is no reason for the winner of an election to want recounts? Recounts are the last resort of the person who cannot accept defeat (a statement that is especially true if the person can have dishonest recounts).

> [snip] Spin it all you want, but the bottom line is Gore
> won the popular vote in Florida and the rest of the US
> and Dubya is preventing it from becoming public.

Whoa, a nation-wide conspiracy (by Bush and "the rest of the US") to keep secrets. And liberals have the nerve to say that extreme right-wingers are obsessed with conspiracies.

> Big money buys this election - and the free use of the US
> as long as Dubya stays in power [snip]

"Big money" has been buying elections for years, skidoo (elections where either Democrats or Republicans have won). In other words, both parties are in the pockets of corporations, the wealthy, and some very powerful groups. In fact, if you want my honest opinion, corporations

should be the least of our worries (if compared to certain powerful groups at work in this country).

Call a local electronics store and ask if they know a local ham. that should help you get plugged in.

Also...I am looking in my 2000 edition ARRL repeater directory and I see Mr. Mark Krotz, N7MK, is the Arizona repeater coordinator. You can contact him at N7MK@qrz.com. he is in Mesa, AZ. betcha anything he can steer you well. Just email him and ask for info. The ARRL is also a wonderful resource. Go to ARRL.ORG and poke around. If you have questions about operating feel free to email me as well. I am a no code Technician with much experience.

Hello! I found what you were looking for, although it does appear at first glance to be in Swedish....

http://home7.swipnet.se/~w-78537/info/chiefstar.htm

Look towards the bottom and you will see--

Programmeringsutrustning PC 3 Inkl. anslutningskabel (monofon-uttaget p&#65533; 2099 till vanlig 25-polig data-kontakt), diskett med program f&#65533;r PC, programmera 2099:an till f&#65533;retagsfrekvenser p&#65533; 130 - 170MHz-banden, svensk bruksanvisning

Which, when translated means something to the effect of: Diskette software for PC for porgramming the PA2099 unit between the 130 and 170Mhz range. It comes with Swedish instructions.

I was able to use the BABYLON translator for this patchwork job, so perhaps you could as well. I am unsure of the exchange rate for your currency, but a price is listed there!

Good luck!

Jay

>That is something that has bothered me for all these years. Nixon's
>popularity was high, we had just gotten un-entangled from Viet Nam--and
>I am fully aware of the events that followed in '75--, and yet, he
>crashed and burned by essentially covering up and becoming a willing(?)
>accomplice.

The coverup is what nailed him, pure and simple.

Maybe he knew about Watergate, maybe he didn't. Never saw convincing evidence either way. It's clear, though, that he surrounded himself with folks who did such stuff in order to win - even though it wasn't necessary.

What he DID know, and allow to happen, was the coverup of the investigation. By so doing, he violated his oath of office. That's why he had to resign.

> I have always wondered WHOM *may* it have been that had
>something *else* on Nixon not known to the public? Had Nixon allowed
>one, some, or all of the Watergate perps to take a fall, could it have
>been that *something* else may have taken him down? Would that *some-
>one* have sung some unflattering song about Nixon, and was it this
>"tune" that could have caused Nixon to protect, cover up, and untimate-
>ly resign? I don't, of course, have a clue.

Nothing of the kind. The "dirt" was simple: He participated in the Watergate cover-up. The investigation had enough solid evidence of that to impeach him.

As a matter of history, Barry Goldwater (K7UGA) had the unhappy duty of going to the White House and telling Nixon that the evidence of his participation in the Watergate mess was so damning that even his own party could not stand behind him if it went to impeachment. The deal that was struck was for Nixon to resign and then be pardoned by Ford, and the whole thing would "go away".

>But, again, given
>that Nixon *was* popular at the time, it just didn't make sense to do

>that, at least, to me.

His popularity was not the issue. His actions were. Heck, if popularity counted for anything in the presidency, Al Gore would be our next president.

Nixon was a polarizer - people either loved him or hated him. In that respect he was much much worse than Clinton.

Nixon resigned because he knew he'd lose an impeachment trial. When the senior senator of your own party tells you he can't help you, it's time to go.

>Was he actually THAT dishonest?

He didn't believe he could win honestly. He thought the country would fall apart if the Democrats got in the White House. He was wrong on both counts.

>Was he THAT
>inept that he couldn't make a correct judgement about how to proceed in
>the matter?

Which one? HE quit because it was the only rational thing to do.

>Or, did he, at first, not realize the seriousness of the
>situation? Underestimating the importance of the matter, did he, in
>the beginning, attempt to "help those who had helped him" out of a bind
>only to find that he was hemmed in a corner and it was too late to
>change course? Or, did he personally, or tacitly, *know* beforehand
>about the matter and, indeed, give approval?

All of the above. His moral compass in that area was busted.

>The years have dimmed my
>recollections about Watergate, but it was never, in my mind, *clear*
>whether he actually knew about the break in, et al, or mistakenly tried
>to cover it up as a minor embarrassment--hoping it would go away.

See above. The best explanation I ever saw was "It was his responsibility to know".

> I am
>sure I will be regaled with "reminders" from readers about how "evil"
>Richard Nixon was, but I really am looking for references, books, etc.
>as to what *REALLY* took place as to Mr. Nixon's involvement.

"All The President's Men" comes to mind.

I was around at the time. I remember clearly.

>The
>years have taken away the lustre and replaced it with a dull finish!
>LOL! I'd just be grateful for reasoned enlightenment.
>
Let me see what the library has to offer...

The funny part is, ol' RMN did some pretty far reaching things. Like opening the door to Red China. Pretty amazing, when you think about it.

Yo, J & H.
There are local hams in all parts of the country who volunteer to administer exams. (VE's= volunteer examineers) (catchy name, huh) A local dealer or a copy of QST or other magazine should give date & time of local club meetings. They almost always give exams at Hamfests, or more often if there is enough demand...The VE's do all the paperwork. Just study up and bring a pencil. I think RadioShack still handles license manuals. Or manuals and practice exams are available on the web too.

An interesting FYI, OT, Off Topic, but perhaps of interest to some.
......
Homepower is a very interesting magazine
that often covers subjects of interest to hams
like battery and emergency power.
AND one can download it FREE. :-)

http://www.homepower.com

It's about $5 on the newsstand.

This note was on ham-software-digest@qth.net

Cheers, 73,
Bill K2UNK

------------------Original message text------------------

Hi all,
I don't know how many of you subscribe to HomePower,
but in issue 79 of HomePower,
there is an article about HAM radio many of you
might find interesting on Page 68 and 69.

You can download justthose pages
or the entire HP 79 issue at

http://www.homepower.com/download.htm#CurrentIssue

I know this doesn't have anything
to do with Antenna's or APRS,
but these are the only two lists
I'm on and thought some of you
might like this article.
Check it out and pass it around to your
friends if you like.

Once you pass you will get a certificate of successful completion.
The exam team will send in the results and required paperwork to the
FCC. Usually in about 1-2 weeks if you search for your name on one of
the callsign databases you should find your name and new callsign.
WRITE IT DOWN! From that point on you can go on the air. You can't go
on the air before then.

>Can I take the test at

As most people know, ballots which contain a vote for two candidates are thrown out as over-votes.

With this in mind, another question in this series is; if you think a dimple on a ballot is a legitimate vote, should all ballots that contain a dimple beside one candidate, but also a full hole beside another candidate, be thrown out as an over-vote?

Remember, your position is that a dimple is a legitimate vote. Therefore, a ballot with a dimple (a legitimate vote), and a full hole (a legitimate vote), should be thrown out because they contain votes for two candidates.

And, of course, since the ballots with a full hole were counted by the machines, the only way to find those ballots with both a dimple and full hole is to recount all ballots state-wide (not just select ballots in certain voting districts).

After all, that would be the only way to get a "fair and accurate" count of the votes. Or is the desire by Democrats to get a "fair and accurate" count of the votes nothing more than an excuse to count select ballots in select districts to insure a Gore win?

Hi,

Hmm, so the only difference between a shitty HAM and a real HAM is the fact that you know how to do beep-beep ? Maybe we should introduce an exam on computers and software to gain access on VHF/UHF as well (otherwise we would get those shitty beep-beep HAMs that think a wire between two trees is an antenna their as well) ?

Isn't this crazy ? Personally I have full respect for people who study this mode, but I don't see NO reason at all why it is used to give exclusive access to decameter bands.

Just get rid of the requirement for CW (and the corresponding license class) on certain segments (the current non-CW segments on HF - and they shouldn't shrink), and keep those CW-segments exclusive for those people that still want to do the exam (that way the different license classes can remain the same as well).

Is this so hard in our HAM world ?

Then you are wrong - I have never seen MTV [but is seems to be a favorite of yours] - Fought for my country during Vietnam, and I get my information from reading the AP and UPI releases. The truth must really hurt when you resort to throwing insults - It really makes you look foolish. I understand the world quite well, I just voice my disagreement instead of meekly going along with what the party affiliations tell me to believe.

no i did not block you. Your name does not show up. I've been tired
and not
feeling well the last few days. Hello and I'm glad you had a good
time. As
far Christmas goes, I'm afraid I am not going to be able to come
down. I have
other plans.

Lloyd
Subj: Re: did you get my picture?
Date: 11/18/00 11:11:18 PM Central Standard Time
From: N0VFP
To: Sohole

Thanks for your picture. you look very pretty and professional. I have had a
long day of work today. I have to work tomorrow and then get packed up to head
to iowa. I'll be there for about a week over Thanksgiving. Means I'll be here
by myself for Christmas. I'm tired tonite. I've had alot on my mind. More
than usaual.

Take care and have a good weekend,

Lloyd
ubj: did you get my picture?
Date: 11/16/00 1:30:29 PM Central Standard Time
From: N0VFP
To: Sohole

Did it come through all right? I just wanted to know. Are you going to send
me yours?

Lloyd
Subj: Here they are

From: N0VFP
To: Sohole

File: lloyd1.jpg (113037 bytes)
DL Time (24000 bps): < 1 minute

Here are some pictures of me like I promised. I dont know how well they came
out, but thgey seem ok. I used my Kodak digital camera. It's a simple
camera.

Lloyd

Please send me your picture please.

Subj: Re: ????
Date: 11/29/00 11:54:32 PM Central Standard Time
From: N0VFP
To: Sohole

no i did not block you. Your name does not show up. I've been tired and not
feeling well the last few days.

Subj: Missed you tonite
Date: 11/14/00 12:12:53 AM Central Standard Time
From: N0VFP
To: Sohole

I was thinking about you tonite. I see you got my mail today. you
didnt write
me back.

Lloyd

ubj: How are you?
Date: 11/13/00 12:14:19 PM Central Standard Time
From: N0VFP
To: Sohole

Did you have a good weekend? Had to work all weekend. I'm getting
ready to
visit my Mom next week in Iowa. I'll be gone all next week for
Thanksgiving.
You got Thanksgiving plans? You'll probably goto warm Florida!
Iowa gets
very cold this time of year.

I'm gonna get my picture taken this week to send to you. I have a
digital
camera. I'll send it as soon as I get it taken.

Are you still in School? I did'nt know If you were or not.

Love,

Lloyd

Subj: Re: Hello
Date: 11/11/00 12:21:44 PM Central Standard Time
From: N0VFP

To: Sohole

Thanks for your response. What's going on in Jan? I have a picture of my
pickup truck, 1997 S-10. Would you like to see it? I really like it a
lot.

Take care,

Lloyd

Subj: Re: re : AOL love
Date: 11/4/00 2:47:44 PM Central Standard Time
From: N0VFP
To: Sohole

How are you?

I'm sorry I have not had time to write you back. I've been working a
lot right
now. I am currently trying to get some more computer courses. For
starters, I
have brown hair, brown eyes. I have a few extra pounds, but been
trying get to
them off. I see you are college educated. I like that in a girl. I
once
dated a gal once, who all she wanted to do was sit at home and watch
TV. Not
my kind of gal! I have a computer education, and trying to get my A+
certification. I would make a good amount of money if I could get it
passed.
I'll be taking an online course.

Well, I write you later

Lloyd

Mores the pity then, that life's experiences have not taught you, nothing is as black and white as you have painted it. The fact you fought in Viet Nam has nothing to do with this election. I was there as well and hardly use it to support my position.

Are you some kind of a nut? Let's do this again slowly...

1. I said - The left is fighting to win the election because Bush won't pardon Gore.

2. You reply - like Nixon was pardoned by Ford?

3. I said exactly, what is your point?

4. You reply some blathering about finger pointing and Hypocritical Republicans. Statement 3 acknowledges that I agree with your position and you want to continue to get in the Democratic rhetoric that would normally be used if I disagreed with you...

Republican or Democrat. they are both sellout lying political hacks.

The whole Democrat/Republican thing is a scam to get you to forget the real issues. The government is giving away your money and priviliges to special interests, and the bottom line is a fight over WHICH special interests will get it.

Two hogs fighting over the trough, that is all.

BC548 = 2N2222 = NPN small signal transistor
This actually crosses to a NTE123AP

12V / 200ohms = 60mA - .06A * 12V = .72 Watts of dissipation.
SL100 = NTE108 which has a Pd of .625 watts.

My NTE book shows the 123AP as having more power then the 108.
Since a pack of 2N2222 (276-1617) are cheap, try it.

For a relay, 275-233 (low power reed) or 275-249 (DPDT mini).

You don't learn anything without letting out some smoke once
in a while. :)

(Damn CB'ers don't know anything, huh? :)

A relay is like an automatic switch. When you apply power, it is like flipping a switch, you just don't have to flip the lever. Electromagnetism does it for you. If you're not sure of how a switch works in relation to the contacts, look in your ARRL handbook or their website.

It's SPDT (single pole double throw) used as an SPST-NO (single pole
single throw, normally open). The contacts are an open circuit until
the coil is energized.

It would make no difference, a set of contacts has no polarity. You could expect to see 4 connections. 2 for the relay coil and 2 for the contacts that are closed when the relay is energized. What are you cooling with the fan?

Misc for Sale: I have pictures I can send by email if you like.

1989 International Callbook
1989 United States Callbook
both in excellent condition, $10 plus postage for the pair.

Knight Model KG-687 Sweep / Marker Generator, very good
condition but missing the handle on the top. Still has the plastic
over the front dials.
$30 plus shipping.

Panasonic KX-P1124 printer, excellent condition with owner's
manual, power cable and "six" brand new ribbons. This takes the
small ribbons like the Okidata type printers.
$25 plus shipping.

IBM Proprinter II printer, very good condition, with owner's manual,
power cable and 2 new ribbons.
$20 plus shipping.

Approximately 30 foot roll of "real" ladder line. This is not homebrew
and has plastic spacers installed. Bare copper wire. You need to see
the picture on this one.
Make offer.

Military style phone plugs with the numeration:

ADC PJ051R M642 / 2 - 2 one each
KINGS PJ-055B one each
KINGS PJ-054R one each
JK-26 one each - this one is the
matching in-line jack
for the PJ-054R
Make offer on all, please.

Again, I have pictures I can send to interested parties.
Thanks, Randy N&#65533;SAH

Whether the old brigade passes on or is revitalized with growth hormones
and hip replacements should be the issue. We should consider the merit
of a morse exam in comparison to all the other mode exams.

Bill, good info.

It's a fascinating magazine and I used to subscribe. But the undercurrent of environmentalist wacko is pervasive. I finally gave it up after suffering through an article written by some manic depressive from Wales crying about every breath of air he takes is stolen from a baby seal or some other mindless crap like that. Anyway I'm glad my money no longer supports that kind of religion.

So if you cannot read they execute you? This might stop truency and
juvenile crime. Lets make this one a mandate.

> > (4) Bush supporters are opposed to crime-reducing strategies such as
gun
> > control

Texaz has implemented a "shall issue" law on concealed carry. That,
Pachmayer grips, and a Bianchi holster make for great gun control. Give
good people superior firepower and the rest will fall in place.

I want to know where the downside is.

Must I point out everything to you ?? I could not be 14 as you accused me of being if I was in Vietnam. There was nothing in the post that suggested it to support my views on the election [which is no longer an election]. Florida's legislature just took the decision out of the voter's hands. Proves that Bush will stop at nothing to get elected. If you think Clinton spent a lot of time in court being persecuted by the republicans, wait till you see all the lawsuits going to court over Jeb's manipulation of the election. [things such as minorities not being allowed to vote, or sent from place to place until the polls closed, etc.] You must have mistaken me for someone you saw on MTV - Spin this one

> Secondly, there is a dial on the top of the unit that has the following
> settings-- MS, +SET, +RPT, SIMP, -RPT, -SET . What do these functions do?

The radio didn't come with a manual??

+ and - RPT mean "repeater offset", either +600 kHz or -600 kHz. When someone says "let's talk on the 146.94 repeater" they really mean that you will listen on that frequency but you transmit 600 kHz higher or lower, in this case lower, 146.34 mHz. (A band plan determines whether the repeater has a + or a - offset.)

SIMP means simplex, or no offset at all. (talk & listen on same frequency) 146.52 is a common simplex frequency.

MS probably means memory scan; scan all the memory channels, or only those that are programmed to be scanned. Most radios let you skip memory channels when you're scanning. You may want to put the NOAA weather station in one of the memories but you would skip that memory spot in the scan because the weather station is broadcasting all the time. If you didn't, your radio would stop at this channel all the time, which defeats the purpose of scanning the memory channels.

Did you take a poll? Are you able to prove up your claim?

Over 99% of amateur spectrum is available to code-free licensees;
what's keeping those "technical folks" from doing their R&D work
in those regions? Or is it just "rag chewing" they're going to
do on HF? If that's the case, then do we really need them if it
means changing the licensing requirements again? If they're *really*
interested in conducting HF R&D but the 5 wpm code test is keeping
them away from their supposed research, then can apply for an
experimental license from the FCC.

> Did you take a poll? Are you able to prove up your claim?

I have received many emails. Most state that the attitude of
some hams posting on rrcb and personal experiences with their
local hams have turned them away from ever following that path.
Many CB'ers would like to use other HF bands. The CW requirement
is seen as useless in this day and age and they won't spend the
time to learn it.

> >I've been holding a soldering iron for
> >over 24 years, I've learned a whole lot since then.
>
> Like which end to hold... =:o

You say that like you're joking, but you really mean it.
If you've been in radio for 25 years, you most likely feel
that you had to learn code, so everyone else should. If you
and your fellow hams would get over it, and stop giving CB'ers
an attitude, you would likely find the ranks filling up. Many
hams started in CB, some come back, others feel they are above
CB'ers. There are good and bad in both groups.

Hi Guys.

Ive been away for a while now regarding operating radios and trying to catch some skip. Ive been a radio engineer for roughly 9 years. Just wondering if anyone can fill me in on how to obtain a full licence to operate a ham radio.

info on. --> exams?
info on--> exemptions?
info on--> morse code in australia??

thanks in advance

please post here or feel free to email me .

ezypezy@ureach.com

thank you

By waiving the exam for one of the modes, you're saying that mode
testing isn't necessary.

What is featful about it? Are we back to the time-in-grade thing?

> 73, KH6O (licensed for 1/4 radio's lifetime)

FWIW, the FCC doesn't value a license for longer than 10 years. Then
its no good unless you renew it. No where on your license does it say
"First Licensed on: xxxx"

So far, all I've heard about this is a bunch of wild claims by third-parties - no legal affidavit from an actual victim, and not a shread od evidence to support such claims. If this turns out like I truly suspect (nothing but more racist rhetoric from blacks), I hope the state of Florida sues Jesse Jackson, and friends, for defamation.

I'm talking about overvotes, many Republicans are talking about it, and it was also brought up in the US Supreme Court yesterday. Of course, Democrats don't want to talk about it because it has the potential to weaken their dimple argument.

Dear Friend,

It becomes my painful duty to write you a letter
of apology instead of sending you the Christmas remembrance
that I had intended for you.

Knowing so well the appetites, likes and dislikes
of my close friends, I made up a list of twelve of my best
friends and went down and bought twelve quarts of "Royal
Canadian" seven-year-old whiskey. Nothing but the very
finest for my friends. I took this home and put it in my
closet and intended to put it up in nice Christmas packages
and send it out to you just before Christmas.

My wife, K0CKB, got to fumbling around in the
closet and found the liquor and didn't understand just
what I intended to do with it. So she came up and told
me to empty the contents of every bottle down the sink,
or else. So I proceeded with the unpleasant task.

I withdrew the cork from the first bottle and poured
the contents down the sink, with the exception of one glass
which I drank. I extracted the cork of the second bottle
and likewise poured the contents down the sink, with the
exception of the glass which I drank. I pulled the sink from
the next bottle from the cork of the next and drank one sink
out of it and threw the rest down the glass. I pulled the
sink out of the next glass and poured the cork from the bottle.
Then I corked the sink with the glass, bottled the drink and
drank the pour.

When I had everything emptied, I steadied the house
with one hand and counted the bottles, corks, glasses, and
sinks with the other, which were twenty-nine. And, as the
houses came by, I counted them again and finally had all
the houses and bottles and corks and glasses and sinks counted,
except one house which I drank.

So this accounts, dear friends, for your not
receiving a more stimulating Christmas present than this
letter. I sincerely hope that from some other source you
get all the joys and happiness that come from Christmas
remembrances.

"May the Lord take care of you, but not too soon."

> 12V / 200ohms = 60mA - .06A * 12V = .72 Watts of dissipation.

Yup - that's the power dissipation in the relay coil when it's turned on. The power dissipation in the transistor is a different matter.

> SL100 = NTE108 which has a Pd of .625 watts.

Yup - and that's more than adequate. Here's why:

In this application, the SL100 is usually either saturated or cut off. Under either of those situations, the dissipation is very small - far less than its power rating.

The worst-case power dissipation would be if somehow the SL100 was biased on in such a way that its emitter-collector resistance matches the load resistance - 200 ohms. Then we have a 12 volt source and two 200 ohm loads in series. Result is 30 mA of current and 12 volts - .36 watt. Half of that winds up in the relay coil and the other half in the SL100. So the SL100 could theoretically have to dissipate .18 watt - 180 milliwatts - worst case.

> My NTE book shows the 123AP as having more power then the 108.
> Since a pack of 2N2222 (276-1617) are cheap, try it.

It will probably work. But the power dissipation isn't really an issue, as shown above. Can the 123AP handle 60 mA of collector current continuously?
>
> For a relay, 275-233 (low power reed) or 275-249 (DPDT mini).

Yup. Almost any 200 ohm 12 volt relay will work.
>
> You don't learn anything without letting out some smoke once
> in a while. :)

Sure ya do. But the old law "experience varies directly as equipment ruined" does have some truth to it.
>
> (Damn CB'ers don't know anything, huh? :)

John, I am curious as to just what speeds you are attempting?
You should know ahead of time that most all ham rigs have keying
that falls off markedly beyond certain speeds. It takes some
rather finnicky equipment to really do good burst CW keying at
the 100-500wpm range on HF. If you attempt those speeds and
are not careful, you may wind up splattering garbage more than
sending information. My older Kenwood absolutely dies at 25wpm
QSK, and 50wpm vox. My Federal set, on the other hand, is actually
rated to 400wpm CW, machine sent. If you find a good computer
program that works well with ham gear at those speeds, holler.
What kind of keying filtering will you be using at that speed?

Good Luck,

Bob

BTW, in a series circuit, all power flows through all parts.
It's better to overdesign then underdesign.

It seems that there are a few Hollywood screenwriters that are hams trying to hang on to the past.

I saw the movie "Vertical Limit" last night. There's a scene where the climbing party, after surviving an avalanche, is trapped in a mountain cave with a broken radio. They use morse code by keying the mic button on and off, communicating to base camp that they are okay. The dialog goes something like, "Dad taught us morse code when we were kids. He said it might save our life some day".

Maybe at one time, but today, only in a cheesy Hollywood movie.

So I'm going to ruin this movie: The girl, her brother, and a nurse that's part of the rescue party, are the only survivors. Scott Glenn's character saves everyone by cutting himself and the billionare asshole (played by Bill Paxton) loose, when too many people are hanging on one line, and the cam won't hold the weight. Glenn's character planned to kill the billionare anyway, since he felt that the billinare was responsible for his wife's death four years earlier, in a previous climbing expedition. After this act of self-sacrifice/revenge, they all live happily ever after.

There. I saved everyone the price of a ticket.

>
> It has an Ic of .06.

60 mills. That means it's working right at rating in the circuit (12
volt supply, 200 ohm relay coil) If the relay coil has less than 200
ohms resistance/the supply voltage exceeds 12 volts, the 123AP's Ic
rating will be exceeded. See below.
>
> > > (me)
> > > For a relay, 275-233 (low power reed) or 275-249 (DPDT mini).

>
> BTW, in a series circuit, all power flows through all parts.

It's usually expressed "All CURRENT flows through all parts". In the
circuit under discussion, the power dissipated in the transistor cannot
exceed that dissipated in the relay coil. When saturated, (turned on),
almost no power is dissipated in the transistor. But lots of current
can flow, and the rating exceeded.

> It's better to overdesign then underdesign.

Of course. You should see the stuff I design and build.

Using a transistor rated at Ic of 60 mA (as you recommended) is not a good idea - it's right at the edge. No margin for component tolerances or supply voltage. F'r instance, if the supply voltage climbs to 14 volts, the current in the transistor goes to 70 mA. That's underdesign.

Well, when CD's were $30 or more each, and the players not always able to handle small problems with the datastream on play back, you wanted something that was a bit better than a paper sleeve.

I still like jewel cases - they're replaceable, even fixable since the parts interchange.

Compare to the Amaray DVD cases -- one good shock (a drop from a foot or two that lands on edge) and the parts that make up the "post" that holds the DVD in the carrier break off. Since everything 's molded, the only replacement will be a future DVD replacement box when those turn up (could use a CD case, but they don't match up with the booklets produced for DVD).

: there were something like seven versions sent out by the manufacturer).

I only heard of TWO counties that did it. Perhaps each of the hand
recount counties (3) did use it.

: But if these machines can't be relied upon to count *votes*,

They count "real" votes fine.

; what suddenly makes them okay for finding non-votes?

It's the "NOT" function of counting a "real" vote.

; Presumably they didn't
: get more accurate and will make just as many errors when used that way.

The machines are tested before the election to make sure that they DO
count good votes correctly. A machine can't be used IN the election if it
doesn't pass that test. (It's in the FS.) And it's quite easy to test it
again by using the test stack of ballots at any time.

: And what about five or seven versions of the undervote separating
: software?

What about it? If a ballot can't be properly counted by the machine it
is sorted out.

I heard there was one version written for Miami/Dade and they even had to
bring their machine up to Jacksonville so they could separate out the
votes up there.

: Isn't that pretty likely to give unequal weighting?

Only if the "NOT" function is different when run each time. :)
Either the vote is counted or it is NOT counted.

: Let's just count the votes indeed ...

Let's just make up unsuportable asumptions.....

Hello folks,

As I write this, the Supremes haven't ruled - but I'm convinced that whatever they do, it won't help Mr. Gore become president. It was clear when they stopped the manual recount where the Supremes' sympathies lie.

I've been reading lots of posts about chads, recounts, ballots, etc. But one thing hasn't been discussed at all - the role of Ralph Nader in all this. Running a tiny campaign on a shoestring budget, he was able to determine the next president. Pretty powerful stuff!

In the past twenty years, third party candidates have determined a number of elections by siphoning off more votes from one party than the other. That's how Clinton got in - and how his VP didn't.

In case you doubt, note that Nader got about 2,900,000 votes nationwide. Polls of Nader voters showed consistently that, if Nader wasn't running, they would do the following:

About half (1,450,000) would vote for Gore
About a quarter (725,000) would vote for Bush
The rest (725,000) would stay home.

Without Nader, Gore's lead in the popular vote would be over a million votes. There's no doubt several close states (including Florida!) would have gone Gore instead of Bush.

Maybe ol' Ralph is actually a Republican in disguise.....

Hearsay. Regardless, if someone is *really* interested in the
world-wide communication nature that the amateur HF bands provide,
they should be devoting at least an hour per day preparing for their
exams rather than wasting time reading and posting to r.r.cb.
That someone lets a few loose cannons change their mind tells me
they really didn't have that strong of a desire to get licensed.

>Many CB'ers would like to use other HF bands.

They do; many illegally use 10m and worse yet, some are on the HF
air-to-ground aeronautical channels -- a catastrophe waiting to happen.

>The CW requirement
>is seen as useless in this day and age and they won't spend the
>time to learn it.

Too bad. It's one of the top two modes in use on the HF ham bands.
At times there are more CW QSOs than on phone. And from what I've seen,
there is more homebrew CW equipment on the air than for any other mode.

Now, apparently you were left speechless in regard to the following
remark of mine:

"Over 99% of amateur spectrum is available to code-free licensees;
what's keeping those "technical folks" from doing their R&D work
in those regions? Or is it just "rag chewing" they're going to
do on HF? If that's the case, then do we really need them if it
means changing the licensing requirements again? If they're *really*
interested in conducting HF R&D but the 5 wpm code test is keeping
them away from their supposed research, then can apply for an
experimental license from the FCC."

Why no response to that?

I had a chance to ride with one of the local police today on a visit to a CBers house. He had been asked a number of times to cease and desist with his overpowered illegal operations.

This person has been the bane of existence to all his neighbors around here, he was handed a copy of the latest federal law, along with the purposed local laws. It was made clear that he would be the target of the first test case under the new law. I observed him trying to justify his rights to do what he wanted on the CB band. He stated that he had heard the FCC no longer controlled CB along with a litany of other excuses. The local law officer explained in a respectful manner that he would shortly have jurisdiction and he should consider this as his final warning. "Hey! you mean your serious?" was his response, the officer responded "as serious as a heart attack" at that point he walked back in the house and brought out what he refereed to as a "ModgeBox" and handed it over to the officer. I believe that this law is going to work. Any way Ga231 sends all the good numbers... He's going 10-7

If RFI is caused by spurious signals from the transmitter, it is NOT okay for a ham, CBer or even your local police transmitter to cause that kind of RFI.

If it is a case of fundamental overload, the cure can only be applied to the affected device.

Info on RFI can be found at:

http://www.arrl.org/tis/info/rfigen.html

and

>> Fine, Brian. Let's have skill tests for say, the top two HF modes.
>> Now, consider the phone test as being waived.

>By waiving the exam for one of the modes, you're saying that mode
>testing isn't necessary.

I'm not saying that and you know it. Consider a mode test as being
waived if it takes no skill to operate with it.

>FWIW, the FCC doesn't value a license for longer than 10 years. Then
>its no good unless you renew it.

But renewing it doesn't require re-taking any exams, so the FCC
does in fact honor our past accomplishments.

>No where on your license does it say "First licensed on: xxxx"

Those who could prove that they were licensed prior to a certain
date (1925?) used to be awarded a 1x2 callsign, even if their
license had lapsed, showing in this case that the FCC did in fact
value a previous license even after expiration.

I don't understand why people have a hard time understanding that a vote for Nader wasn't a vote against Gore. It was a vote for Nader. Nader voters didn't want Gore. Nader didn't like Gore, neither did he like Bush. The people who followed Nader didn't like Gore nor did they like Bush. Gore was not "more like Nader than Bush" -- he was more like Bush than like Nader. That some people might have voted for Gore if they couldn't find anyone who represented their views is specious.

Nader didn't cause Gore to lose the election -- Gore did that himself.

In 1996 there was a helicopter rescue on Mt Everest... You might remember
the horror story of a whole group of climbers who were caught in a storm
while on their descent. Several died.... one, a Doctor, survived (minus
most of his face and many toes and fingers... frostbite) and was lifted from
Everest by Helicopter at a record 20,000 ft. (beyond 20,000 ft air is so
thin that helicopter's rotors are no longer capable of aerodynamic lift).

Hello Tom: That was a good one, I got a big kick out that one.

"There. I saved everyone the price of a ticket"

Perfect!

Jay at jay123a@qnet.com ..... In the Great Mojave Desert, just down
the road ah ways from the fillin station.

Hi Eldred
Are you looking for an antenna tuner? I have a "new, never used" MFJ
949E that I'll sell for $100 US, I picked this up for a new ham and they
changed their mind? The 949E cost apx. $150 new. If this isn't what
you're looking for, I'm sorry and please disregard.

The MANDATORY gun ownership is here in Georgia. The City of Kinnesaw. The law was passed to counter the Morton Grove, Illinois case where they ruled that gun ownership in the town was illegal. What is amazing is that inner-city youths seem to avoid it like the plague. Also interesting to compare the crime rates before and after both actions. :>)

I listened to Jesse again last night spewing his vomit of hate and race baiting. "Dis shud be com parad ta da Dread Scott de shishun"

And Gore's lawyers are trying to twist the meaning of Remand.... Depends what the meaning of is is

Get over it Jesse! Your constituates were too fricken stupid to follow a cheat sheet on how to vote. If you have a problem with that kiss my big white a**. You liberals, homosexuals, and African-American are tap dancing on my very last nerve! We have watched your slash and burn tactics during this election and you are now on notice!

3016. How to be a UnaBasher

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-13 15:43:11 UTC
From: K0HB <k0hb@my-deja.com>
Message-ID: <9185ec$n10$1@nnrp1.deja.com>
Source record: 97933
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

A few inbred UnaBashers regularly show up here bashing ARRL, CQ, Morse Code, CB, Republicans, Technicians, Extras, Herbie, or some other random subject or group that pissed them off this morning.

Most of us view them with some level of disdain, but others view them with admiration and would like to emulate them. For those who'd like to refine their bashing efforts, I thought I'd post some rules that they (or you) could follow to become a really 599+, full gallon, state-of-the-art UnaBasher.

Rules for Successful Bashing -

1. Be anonymous. Most of us know who you are anyhow, but you'll impress N0VFP and KC8JBO.
2. Use 10% fact. 90% suggestion. The facts will lend credibility to your unfounded suggestions.
3. Use multiple ISP's, handles and aliases.
4. Use two or more aliases to simulate a discussion. The 'pit bull' tries this, but is always betrayed because all his messages come from the same IP address.
5. Identify the "gurus" on the newsgroup and suck up to them.
6. Give the appearance of being open minded.
7. Be bold in your statements. Dummy newbies follow strength.
8. Write headlines in caps with catchy statements.
9. Don't worry about being labeled a "Basher". Newbies won't know your history.
10. When identified put up a brief fight, then back off. Return in a week unless your foe is a weak in reasoning powers.
11. Form your bash as a question, not a statement. Like "Does ARRL hate technology?", or "Why can't most Extras figure out Ohms law?" People can refute your statement, but nobody can answer such dumb questions.
12. Three or four aliases can dominate a newsgroup and wear down the target.
13. Bait the target into personal debates putting their focus/efforts on you and not the facts. Divert their attention from facts. Facts are your enemy.
14. Do not fall for challenges on the truth of what you are saying. Bashing is a game and you are playing it with your own rules. Ignore embarrassing questions which betray your lack of research, or call the questioner a Nazi or a liar. (See Anderson and Robeson for instruction.)

Your are a:

Grade "B" UnaBasher:
If you post lots of old news, respond to all positive posts with a negative side. Never respond to being called a Basher.

Grade "C" UnaBasher:
Very good way with words, always claims to be your "friend" taking the positive poster into confidence, sucks up, and then uses the relationship to bash somebody else.

Grade "D" UnaBasher:
Needs to learn the basics about being convincing when making a negative statement. Has no anonimity whatsoever, and tends to use quotations of others (preferably of dead people), rather than original thinking to make their point.

Grade "F" UnaBasher:
A complete idiot, most readers are not convinced he knows anything about amateur radio in general, let alone the current topic of conversation. The type that says something "sucks", but gives no rationale, shows up every so often but no regular schedule.

That's what I meant by "That's how Clinton got in - and how his VP
didn't."

Ya gotta wonder what Nader could do with real money and TV debate
appearances.

Anybody remember John Anderson in 1980?

What the heck are you talking about, Brian?

> We should consider the merit

I've considered it. Morse use requires skills most people don't learn
in everyday life. Most people learn how to talk by the time they are
three and how to read and write by the time they are six, so modes
requiring those skills may not need separate tests.

> > four decades or so.
>

> You're a mere kid in ham years.

What kind of math tells you that? Sure there are lots of older folks
with ham licenses - that's a good thing.

When I was licensed in 1967, there were about 250,000 US hams. If we
figure that only 2% of those 1967 licensees died off or lost interest
per year (that's 5000/year) then 165,000 of them have left ham radio,
leaving 85,000 of us old timers from that era. Today there are about
682,000 US hams - that means I've had a license longer than 597,000 of
them.

I think that what bugs you, Brian, is that I'm only four years older
than you, but have much more experience in ham radio than you do.

> You can start bragging in another 20

No, you interest the boys AND the girls. What, you think stuff like
radio is not for females? Chauvinist.

>But
> with all thats on tv these days, thats about 9 years old.

An 8 year old girl got her Extra a few years back. 20 wpm code and five
written exams.

Thanks - but it's even worse.

Licenses for US hams showed up in 1912 - 88 years ago. I was licensed
in 1967 - 33 years ago. So I've been licensed for 37.5% - three
eighths - of the time when hams in the US were licensed. And the number
just keeps getting bigger.

Who didn't have a prayer of actually winning. He knew that - his
reasons for running were to make a political statement, and to
hopefully get enough votes so that next time his party would qualify
for matching funds.

> Nader voters
> didn't want Gore. Nader didn't like Gore, neither did he like Bush.
The

Nader.

Of course. That was one of Nader's points.

> That some people might have voted for Gore if they couldn't find
anyone who
> represented their views is specious.

Not at all. Half of Nader voters consistently said that if Ralph wasn't
running, they'd vote for Gore. Lesser of two evils and all that. Only a
quarter said they'd vote for Bush.
>
> Nader didn't cause Gore to lose the election -- Gore did that himself.

Nader turned a sure thing into a close race. Do you think the Nader
voters who were polled were lying? I don't.

Ross Perot did a similar thing to Papa Bush.

Does anyone have any info on the new FT-817 transceiver, other than what is on Yaesu's web site? Being an avid QRP'er this looks like a possible "Dream Machine". Thanks for any help.

3036. understanding CTCSS?

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-13 20:24:40 UTC
From: David Snyder Hale <david@isi.mtwilson.edu>
Message-ID: <918lu8ols1@agate.berkeley.edu>
Source record: 97853
Cross-posted to: rec.radio.amateur.misc,sci.electronics.misc

I was explaining CTCSS to someone yesterday, and they asked,

"If you send a sub-audio tone to open the squelch, then once
the squelch is open on the receiver by the desired transmitter
which sends the CTCSS tone, won't that allow other transmitters
to get in at the same time and cause interference?"

I hadn't thought of that "problem," I guess because I've never
experienced it. So, the only thing I could think of why this
doesn't happen (or does it?) is due to the so-called capture
effect in FM. Is this the explanation? If so, can someone give
me a better (electronics) explanation of the capture effect?
All I can find in books so far is that it amplifies the stronger
signal, but I don't see how this comes about.

tnx,

I can't give you the full technical explanation for capture effect, but basically it's an FM phenomenon where a signal as little as 3dB stronger than the original will "capture" the discriminator in the receiver and that is all that will be heard. In AM, you can hear the presence of a signal as much as 20dB down from the stronger one.

The answer to your CTCSS question is that it's a 2 part system; in addition to the CTCSS encoder on your transmitter, there's a CTCSS decoder in the receiver that detects the presence of the correct CTCSS tone before opening the squelch. Once that tone is lost, the squelch closes, and other (non-encoded) signals won't be heard. If a stronger (non-encoded) signal "captures" the receiver, however, the receiver will go quiet because there is now no tone to open the squelch.

In other words, if you're the only CTCSS encoded signal at the receiver input, but there are stronger non-encoded signals there, too, you won't get in.

I used to turn off my encoder and key up over a long winded user who had timed out the repeater to allow the repeater timer to be reset because that had the same effect at the repeater as if the windbag had unkeyed.

Not all systems work that way, however, I remember another repeater that once its squelch was opened (by CTCSS) it would stay open as long as carrier (encoded or not) was present. There was no way to reset the timer on that system.

Now that I reflect a bit more, I believe the CTCSS may work not on the squelch of a repeater, but on the COR (carrier operated relay). In a

simplex receiver, however, it does work on the squelch.

And that's exactly what NBC news called it the day after the election.
Evidentally, you weren't paying attention to it then either - or to the fact
that this is being posted to RADIO-related newsgroups, not political ones.

> signal, but I don't see how this comes about.

Yes, and no. Once the squelch is opened by the tone, it will remain open only as long as the tone itself is still heard. Therefore, a weak interfering signal will merely cause an audible heterodyne on the strong signal but won't cancel it out. However, a strong interfering signal (without the CTCSS tone) will cause the receiver to see a carrier without the tone, and thus, it will close the squelch.

Since CTCSS is only effectively used with FM signals, I ignore what could happen with AM+CTCSS, which could produce strange results....

That's 4 words, but we get your drift.

>Lock and load!
>
Hopefully it'll stop at that.

Too bad Jesse has made it sound like a racial issue.

It is possible to get a Helicopter up to that altitude, but not with
any useful load or much fuel. I.E. Helicopter rescue or search at that
kind of altitude is most unlikely.
